swift fall
from grace, Page 21

NEWS SUMMARY

GENERAL

Reagan takes his case to Congress

President Ronald Reagan is making a major effort this week to regain control of a Congress that is slipping from his grasp on vital issues ranging from the 1984 budget to Central American policies. He plans to make a major address to a joint session of the Senate and the House of Representatives tomorrow night. The President says he will "marshal every resource of the Administration" to retrieve in the Senate on Thursday the setback caused by the Senate budget committee's rejection of proposals for 1984. Page 5

Diary doubts grow

British historian Hugh Trevor-Roper said in Hamburg that he now had doubts about the origin of diaries said to have been written by Adolf Hitler. U.S. authority Gerhard Weinberg pointed out that no handwriting study had been based on the diaries themselves. West German state Bavaria said it would claim copyright if the diaries were genuine, as legal heirs to Hitler's estate. Page 3

Mafia land inquiry

Sicilian authorities are investigating whether the Mafia has bought large areas of land around the Nato base at Comiso. Page 29

Soviet Jews held

KGB security police held 11 Soviet Jews for questioning after seizing them in a meeting in a forest outside Leningrad. Page 37

Fine Gael problems

MPs of Fine Gael, the majority party in the Irish ruling coalition, met tonight to try to avoid a parliamentary defeat tomorrow over a proposal for a constitutional amendment on abortion. Coalition partners Labour have given their 15 MPs a free vote. Page 3

Athens crash trial

Two Swissair pilots went on trial in Athens for negligence in the death of 14 passengers when their aircraft overshoot an Athens runway four years ago. Page 3

Spain vetoes deal

Spain's Government vetoed a \$300m deal for refitting three South African submarines that would have contravened a U.N. embargo. Page 3

Finnish switch

President Mauno Koivisto has asked Social Democrat Premier Kalevi Sorsa to form a new Government, following last month's election. The new administration is likely to omit Socialists and Communists, who have featured in most Finnish coalitions in the last 17 years. Page 21

Briefly

European Football Union banned the immediate televising in stadiums of action replays. Their first university is being built, to open in 1985. At least 250 Zambians have been killed by Angolan mines on the border, says the Zambian National Mirror. Page 29

BUSINESS

£ strong as oil price increases

STERLING was firm on the foreign exchanges, following the news that the Soviet Union had matched Egypt's weekend oil price increase by putting 50c a barrel on the Urals crude it sells to Western Europe. The pound gained 2.5c to reach \$1.56, its highest since late January. Page 20, 44

It also rose to DM 3.83 (from DM 3.7875). FF 11.47 (FF 11.345), SwFr 3.22 (SwFr 3.185) and Y370 (Y366.25). Its Bank of England trade weighting advanced from 83.2 to 84, its highest closing level this year. Page 20, 44

DOLLAR'S trade weighting fell from Friday's 122.4 to 122, and it dropped to DM 2.444 (DM 2.4485), FF 1.2475 (FF 1.24), SwFr 2.855 (SwFr 2.86) and Y236.13 (Y236.3). Page 20, 44

OIL market improvement was also signalled by a 12c rise in the spot price for Brent crude, the North Sea reference figure, which reached \$29.55, close to the official selling price of \$30. Page 29

GOLD rose \$2.5 in London to \$441. In Frankfurt it rose \$4.25 to \$443.5, and in Zurich it went up \$5 to \$443.5. Page 41

LONDON: FT Industrial Ordinary Index gained 5.3 at 6833.3. Government Securities showed advances averaging a little below 0.5 per cent. Report, Page 37. FT Share Information Service, Pages 42, 43

WALL STREET: Dow Jones index closed down 9.99 at 1,187.21. Report, Page 37. Full share listings, Pages 38-40

TOKYO: Nikkei Dow index edged by 1.29 to 8986.89, and the Stock Exchange index edged up by 4.96 to 823.22. Report, Page 37. Leading prices, other foreign exchanges, Page 40

SOVIET UNION has indicated to West German industrialists and bankers that it may like their help in a project to turn Siberian brown coal into petroleum or gas. Page 3

EEC MINISTERS agreed to continue production quotas and minimum price guidelines for Community steelmakers. Page 3

UK FINANCIAL institutions invested \$2bn (\$6.26bn) overseas last year, an increase of 38 per cent. Page 8

BANKAMERICA announced acceptance of its \$400m takeover of Seafirst, the biggest banking group in Washington State, which has revealed a \$133m first-quarter loss. Page 21; Lex Page 20

BRITISH STEEL chairman Ian MacGregor held talks in Moscow aimed at increasing exports to the Soviet Union. Page 21

SEARS ROEBUCK, the U.S. stores group, is selling its loss-making Brazilian stores to a Brazilian consortium for between \$40m and \$50m. Page 21

AT&T, the U.S. telecommunications major, is to close its biggest plant in Ireland, into which it moved only 18 months ago. Page 3

FORD of UK profits in 1982 fell 13.4 per cent to £194m (\$303.8m), with interest on loans to the U.S. parent the main prop. Page 20

FRENCH SPURN PHILIPS IN LICENCE DEAL WITH JVC

Thomson-Brandt to make VCRs for Japanese company

BY PAUL BETTS IN PARIS

Thomson-Brandt, the large nationalised French electronics group, opted yesterday for Japanese rather than European technology to turn it into a major manufacturer of video cassette recorders with annual production of up to 1m units in the next few years.

The French company said that JVC of Japan had granted it a licence to manufacture its VCR products for all markets except Japan.

The landmark licensing agreement is a major blow to Philips, the leading European electronics company, which had hoped to team up with Thomson to strengthen its production and market penetration of its V2000 video system.

Philips yesterday sharply criticised the Thomson-JVC deal, calling it "a decision to assemble a Japanese product" on the part of the French company. "The worst thing that can happen in Europe is that Europe should lose the opportunity to contribute its own technology," the Dutch group said in a statement.

But the French decision to select the VHS standard developed by JVC, which accounts for 70 per cent of the world VCR market, is also a revenge of sorts by Thomson. The French group continues to blame in part Philips for the collapse of its

recent takeover bid of the West German Grundig company.

The Grundig deal was seen by Thomson as an opportunity for pan-European collaboration on a sufficient scale to compete effectively against the Japanese.

But throughout the Grundig negotiations, Thomson maintained contact with JVC. Indeed, it warned it would seek a deal with JVC in the event that the Grundig deal was blocked by the West German authorities or Philips, which owns 24.5 per cent of the German company.

Nonetheless, there is a profound irony in the latest development in the long-running VCR saga. Thomson has in fact chosen a Japanese partner to help it build a major presence of its own in the VCR market at a time when the French Government has imposed extremely harsh and controversial import restrictions on VCRs. These include, since last October, processing of all imported VCRs through the small customs centre of Poitiers in central France.

However, concurrently with the Thomson-JVC deal, the French Government has also been negotiating with the Japanese over its VCR import measures. These negotiations have made good progress with Mme Edith Cresson, the new French Trade Minister, indicating that restrictions may soon be lifted, bringing to an end the so-called "Battle of Poitiers."

France's tough line on VCR imports also appears to have played a part in inducing JVC to grant for the first time to a non-Japanese company the licence to manufacture its VCR system. In the past, JVC has only granted licences to other Japanese companies including Matsushita, Akai, Hitachi and Toshiba.

Significantly, Thomson plans to use the licence initially to produce in France some of the most sensitive components of a VCR, including the mechanical heads and other mechanical parts. These components

Michelin loses FFr 4bn but sees improved trend

BY DAVID MARSH IN PARIS

THE MICHELIN tyre group, one of France's largest private sector companies, has announced an overall consolidated loss of around FFr 4bn (\$545m) for 1982 because of the slump on the world tyre market and the heavy cost of restructuring operations.

The loss, against a consolidated deficit of FFr 290m in 1981, was announced in a letter to shareholders, which informed them of the "crucial necessity" that Michelin would be unable to pay a dividend for last year.

On a slightly less pessimistic note, the company said efforts to cope with tyre crisis were starting to bear fruit and this trend should continue throughout 1983 and 1984.

After allowing for heavy restructuring costs - which include large redundancy programmes involving 9,500 workers in France, Britain and Italy - Michelin said its results in the second half of 1982 showed a clear improvement compared with the first six months. This trend was confirmed at the beginning of 1983. The company's main operating

subsidiary in France, Manufacture Française des Pneumatiques Michelin, saw its loss more than double last year to FFr 1.65bn from FFr 662m in 1981.

The fresh deterioration in Manufacture's results necessitated a further injection of capital funds from the Compagnie Générale des Etablissements Michelin parent company, which suffered itself a FFr 127m loss last year because of "very important" provisions.

The group said the prolonged recession in the vehicle market, especially in the U.S., coincided with a period when Michelin had not yet completed an effort of expansion aimed at making it the world's second largest tyre maker.

Underlining the fact that adaptation to a "brutally reversed" economic situation demanded time, Michelin pointed out that it had on the whole suffered less than its competitors. Group tyre sales declined in volume by 7 per cent between 1978-79 and 1982, although the international market dropped by 15 per cent.

In the European and North American markets last year, Michelin increased sales of car tyres and resisted the further decline in the market for heavy vehicle tyres.

The group's foreign operations, which turned in collective profits for 1981, mainly registered losses in 1982 because of restructuring costs in Europe and the start-up of U.S. production facilities.

The group's overall self-financing capability after tax was negative to the tune of FFr 700m, although it would have been positive but for the rest of Manufacture in Brazil, which indicates that it is also encountering difficulties there.

UK to press own satellite plan

BY RAYMOND SNOODY IN LONDON

BRITAIN is expected to push ahead with developing its own direct broadcast satellite (DBS) system - C-MAC - following the European Broadcasting Union's failure to reach a comprehensive agreement on a European standard for DBS.

The EBU technical committee decided after nine hours of talks on DBS at a plenary session in Copenhagen last week "that it was of paramount importance to achieve a single European standard for DBS."

The system, the committee said, should be a form of C-MAC.

The French, however, decided they could not associate themselves with such a statement "at this time" and will almost certainly proceed with their own SECAM/PAL system. The Germans said they would only accept a uniform European standard if all nations involved

agreed. They are likely to follow the French.

The EBU technical bureau will continue the search for a compromise which would involve the MAC picture system and the French sound system. The bureau will meet in Geneva in June.

But UK industry, broadcasters and officials believe urgent decisions now have to be taken if the UK system is to be ready in time for the scheduled start of DBS in Britain in September 1986.

The BBC plans to run two new satellite channels which can be received by anyone prepared to buy a special dish aerial. One channel is likely to be a subscription service with first-run feature films and the other broadcasting 24 hours a day. France and Germany plan to begin satellite broadcasting a year earlier in 1985.

A Whitehall working party, bringing together all the government departments involved with DBS, will meet later this week and a formal statement is expected from Mr William Whitelaw, the UK Home Secretary, next month.

This will set out the specifications for C-MAC to enable British microprocessor and television companies to get on with the job of designing the complex integrated circuits involved. Although officially both UK government departments, the BBC and the Independent Broadcasting Authority will continue the search for Europe-wide agreement, there is a realisation that the UK can no longer hold back.

Mr Bernard Rogers, technical advisor on satellite broadcasting to

Portugal's election draws heavy turnout

By David White and Diana Smith in Lisbon

PORTUGAL'S voters turned out in large numbers in yesterday's general elections, contrary to some predictions that political disillusionment would bring heavy abstentions.

By 8.30pm London time, only a handful of boroughs had produced results, insufficient to demonstrate any decisive voting trend.

First indications after the close of polling showed a vote of between 82 and 84 per cent of the 7m-strong electorate, close to the turnout in the last parliamentary contest in 1980, despite bad weather in the north and centre of the country.

Voting was especially heavy in the drought-hit, communist-dominated farm region of the Alentejo. A high vote was expected to strengthen the chances of the former Centre-Right coalition Government parties of thwarting an outright majority victory by the Socialist

The Socialist Party, expected to receive the largest vote of any party following the recent break-up of the Centre-Right coalition, is reckoned to have a more faithful electorate than its Social Democrat and Christian Democrat rivals.

The new leaders of the Social Democrat PSD and Christian Democrat CDS, respectively Sr Carlos Mota Pinto and Sr Francisco Lopes Pires, were banking on a latent fear of socialism in the conservative rural districts of the North and centre to keep Sr Mario Soares, the Socialist leader, from riding in on a straightforward majority in the 250-member assembly.

The two parties, which formed the main part of the coalition which has ruled since the end of 1979, would require a combined vote of at least 48 per cent to be able to reconstitute a ruling alliance under the country's complicated proportional representation system.

The Socialists were reckoned to require a lower figure of some 42 per cent in order to govern without support from other parties, because this system favours the most heavily voted single party.

Yesterday's voting was orderly and almost incident-free. Rain, storms and snow in the north and centre appeared to do little to deter voters. Many Lisbon families by contrast, profiting from brisk spring weather, took advantage of the national holiday - marking the anniversary of Portugal's 1974 revolution - to spend a day out before rushing to the ballot stations at the last minute.

Socialists pick Sinowatz to follow Kreisky

BY W. L. LUTKENS IN VIENNA

HERR FRED SINOWATZ, Vice-Chancellor in the outgoing Austrian Government, was yesterday nominated by the Socialist Party to replace Chancellor Bruno Kreisky, who resigned on Sunday night after his party lost its absolute majority in the general election.

The party executive also accepted Dr Kreisky's decision to leave office but it refused his request to find a new party chairman as early as June. Herr Karl Blech, deputy chairman, said that Herr Sinowatz wanted Dr Kreisky to stay on for the time being.

Herr Sinowatz, who was born in 1929, has friends in all parties and has proved himself to be a man amenable to compromise. He comes from the powerful trade union movement. Unlike some of the Socialist leaders ranking behind Dr Kreisky, Herr Sinowatz is regarded as a moderate socialist even among members of other parties.

The final official result of the election is expected today and could give an extra seat to the People's Party at the Socialist's expense.

The provisional result announced on Sunday was: Socialists, 48 per cent of vote and 90 seats (51 per cent and 85 seats in 1979); People's Party 31 seats, 43 per cent (77 seats and 42 per cent); Freedom Party 12 seats and 5 per cent (11 seats and 6 per cent). A quirk of the electoral system gave the Freedom Party more seats this time for fewer votes.

Protest parties, whether West German-style Greens or of the right, won no seats.

China 'near to \$2bn aid deal with Japan'

BY MARK BAKER IN PEKING

CHINA says it is close to agreement with Japan on a financial aid package worth around \$2bn after two weeks of negotiation in Tokyo.

The prospective agreement, disclosed by vice-premier Yao Yilin at the conclusion of a visit to Japan, effectively cements the close ties between Peking and Tokyo, both of which have cool relations with Moscow.

The specific sum has not been decided, but it could be as much as \$2bn, as informally suggested by the Japanese government, or even more, Yao said.

Although the period of the loan was not indicated, it is likely to be of the same order as the two-year term which applied to Japan's first loan, concluded in December 1981.

The new loans would be used to complete major transportation and communications projects under China's sixth five-year plan.

Mr Yao said the projects would include reconstruction and expansion of Qinzhangdao, Lanyungang, Qingdao and other harbours, electrification of railways between Zhengzhou in Henan Province and Baipi in Shaanxi Province, laying a second track on the Peking-Canton line, and upgrading the telephone systems in Shanghai, Tianjin and Canton.

Japan's first credit package of \$1.4bn expires at the end of this year.

AIR FRANCE

Depart London-Heathrow by AF 809

Saturday

via Trans-Siberian route

Sunday

Arrive Tokyo 9:30

Monday

4:00 meeting with Mr. Nakamura

AIR FRANCE BRINGS LONDON-TOKYO 4hrs. 40mins. CLOSER TOGETHER.

Air France is the only airline to offer you so much speed with so much convenience all the way to Tokyo. Our weekend service gets you there faster and in time to start work first thing Monday morning.

The re-introduction of our Trans-Siberian route by B747 saves you 4hr. 40m. on our standard flying time - and you arrive with time

to relax properly and prepare yourself for the working week.

Our Summer schedule departs Heathrow on Saturday, arriving Tokyo at 09.30am on Sunday. Transit is via Paris-Charles de Gaulle Terminal 2 - the Air France "Express Terminal".

Ask your Travel Agent for full details - or contact Air France direct.

EUROPEAN NEWS

Walter Ellis reports on the move to trade pay rises for shorter hours Dutch decide even saints take time off

THE DUTCH cost-of-living index system, granting workers automatic wage rises to compensate for inflation, was previously held to be the 11th commandment in the Calvinist system of Dutch morality.

Last year, the biggest trade union federation in the Netherlands declared itself opposed to any attempt at decoupling of the system. Yet today its sanctity has gone—and the unions have accepted in its stead the right to shorter working hours, a trend which could spread all over Europe.

Short-time working, viewed until recently merely as a barometer of economic recession, is now increasingly seen as a means of rendering that recession tolerable to the greatest number. And as the concept of the age of leisure gains currency within the trade union movement, the idea of spreading less work around more people seems poised to assume a permanent place in industrial practice.

The drive towards shorter working hours and lower wage rises in the Netherlands has been heightened by two factors—the necessity for public spending cuts to improve the state of the economy, and the alarming increase in unemployment.

The government, a Centre-Right coalition of Christian Democrats and Liberals which took office only last November, has a platform of rigid economic austerity, with wage moderation as a main plank. The Prime Minister, Mr Ruud Lubbers, had warned that the extent of public spending cuts to be imposed

would in part depend on pay settlements. If moderation was not achieved, even more would be pruned from state budgets than the planned $\text{F}1$ 13bn ($\text{£}3.2\text{bn}$), later increased to $\text{F}1$ 15bn.

The Dutch economy is in trouble principally because of falling prices for the country's most valuable export, natural gas, but company profits are sharply down, as the level of world trade, on which the Netherlands depends more than most countries, continues to

Stagnate. There have been some tentative signs that an improvement may be seen soon but the effects of the recession are likely to be felt for a considerable time to come.

In addition, unemployment in the Netherlands is increasing at a faster rate than anywhere else in the European Community. In March, a total of 789,200 people were out of work—16.5 per cent of the workforce. By the end of the year, the total could be above 900,000.

So far, almost half the sectorally-organised Dutch workforce has accepted reduced hours in return for non-payment of indexed pay rises. Talks are still in progress concerning another 300,000 workers, while 384,000 have insisted on being paid their indexed rise. The latter group includes 260,000 building workers, who traditionally drive a hard bargain. Talks

are expected to resume over increases due later in the year, however.

Most of the major companies and unions which have agreed to reductions in hours have accepted a working week of 36 hours on a graduated basis. The metalworkers and the printworkers have taken this popular route.

In most cases, there are provisions for early retirement and the training and eventual employment of the young.

It is also intended that as soon as companies are in a position to do so, they should take on more workers to fill the 5 per cent vacuum established by the reduced working week.

Unions expect that full-scale re-employment may have to await signs of an economic upturn, however.

Other schemes include that of the bank workers, who have accepted a rise of only 0.5 per cent and an extra nine days holiday this year and next. In addition, 2,500 young people will be taken on part-time by the banks to learn basic skills. They are to be offered full-time employment when they reach the age of 23.

One scheme which was rejected by both unions and Government was that put forward by Fokker, the aerospace concern. Fokker has been hard hit by the fall in demand for commercial aircraft and late last year announced that it was

obliged to lay off some 1,400 workers.

The management put forward a plan under which young workers would have been employed half time on half pay, with the Government making up the missing wages. However, the unions felt this was too extreme and the Government objected to the cost, so 1,150 men are due to join the dole queues later this year.

No-one can say yet where the trend will lead. In the short term, it could simply become the norm for Dutch employees to work a 36-hour week. Having accepted that, workers can still look forward to the return of the indexed rise, albeit in a modified form.

Mr Henk Lemmink, a leading researcher with the FNV, the largest trade union federation in the Netherlands, is convinced however that the change now taking place is vital for the future prosperity and stability of the workforce, which is growing at a rate of 1.5 per cent per year.

It's our view that it is absolutely necessary in the Netherlands to tackle unemployment by other means than simply seeking the restoration of economic growth," he said. "It was also vital to begin the process of redistributing the available jobs so that more people, especially young people, would gain entry to the labour market."

The fact that our labour force is still expanding, plus a real unemployment total of nearly 800,000 means that even with an optimistic view of the chance of economic recovery, some means has to be found which gives more people the opportunity to work.

Mr. Ruud Lubbers, above, whose warning on spending cuts seems to have galvanised the trade union federation, led by Mr. Wim Kok, below, into a new attitude towards leisure

W. German economic optimism based on tenuous evidence

BY JONATHAN CARR IN BONN

YOU MIGHT be forgiven for thinking that West Germany is taking an economic boom. Stock market indices have shot to new highs. The Hanover industrial fair has just recorded a record attendance. And the latest survey of the business climate, released today by the IFO economic research institute, talks of growing optimism.

True, many entrepreneurs—questioned by IFO during March, which was generally election month—were still unhappy about their current business. But they seemed confident of an upturn over the next half year. Even the fall in demand for capital goods in February was shrugged off as due to special factors. It did not undermine the belief that better times were at hand.

On the face of it this is odd. In the past, West German businessmen have often groined over economic circumstances which to non-Germans appeared relatively favourable. Now they seem confident about the future although the evidence to back up their feelings looks rather tenuous.

Part of the new buoyancy is political in origin. After years of Social Democrat-led government, a centre-right coalition which says it will encourage

private initiative and reduce the role of the state has been confirmed in office by the March 6 election. That is one key reason for the surge in share prices, through buying by foreign as well as domestic investors.

Furthermore, all kinds of indicators seem to suggest that an economic upswing must be just around the next corner. Interest rates have fallen further, encouraged by the Bundesbank's action on March 17 in cutting the discount rate to 4 per cent and the Lombard rate to 5 per cent. This is the lowest level for both rates since early 1979—before prolonged recession set in.

Inflation at an annual rate fell to 3.5 per cent in March (after an average 5.3 per cent last year). With the falling oil price and the latest revision of the 3-Mark within the European Monetary System (EMS), there is a good chance of keeping consumer prices down to an average of about 3 per cent for the year.

To round off the positive side of the picture, the current account of the balance of payments could be about DM 10km in surplus this year, after emerging narrowly from the red in 1982.

Moderate wage accords averaging increases of around 3 per cent—for this year show that the consensus between employers and trade unions is holding pretty well, despite public squabbling.

That said, it is worth emphasising that the level of economic activity remains low and that the risks to a firm and continuous upswing are large. After two successive years in which GNP has contracted in real terms, the government now says it expects "zero growth" in 1983 (and is not likely to be coming on the side of pessimism).

Enterprise earnings remain weak and the growth rate of fixed asset investment seems likely to tail off in 1983 after a mild boost this year. Unemployment fell slightly in March, but is likely to rise again next winter.

Above all, a large question mark hangs over West Germany's export markets—given the debt problems in Eastern Europe, the developing world and in some OPEC states.

West German businessmen are thus looking more than ever the U.S., whose strengthening economy, they hope, may give a decisive push to an upswing in the West.

Setback for Soviet spy network

BY ANTHONY ROBINSON, MOSCOW CORRESPONDENT IN LONDON

SOMETHING HAS gone badly wrong with the worldwide Soviet spy network in the nine months since Mr Yuri Andropov relinquished his 15-year tenure as head of the KGB. At least 62 Soviet diplomats, officials and journalists have been expelled since Mr Andropov's departure.

Part of the new buoyancy is political in origin. After years of Social Democrat-led government, a centre-right coalition which says it will encourage

the weekend statement by Mr William Webster, director of the FBI, that more than 900 of the 3,000 Soviet bloc diplomats in the U.S. had been identified as trained intelligence agents implies that the recent spate of expulsions may not be the end.

This certainly seems to be the fear of Mr Andropov, who told the West German magazine Der Spiegel that Moscow would not retaliate against the recent expulsions of 47 Soviet officials from France.

Mr Andropov explained that "Soviet restraint" was a reflection of the value which Moscow attached to long-term Franco-Soviet relations.

This is probably partly true, but it glosses over the fact that when the French authorities presented their list of those expelled they included the

names of 50 other Soviet officials who would be expelled if the Soviet Union took counter measures.

In the French case, there are between 700-800 Soviet officials in France, not only diplomats, journalists and trade representatives, but also international civil servants at Unesco and other bodies.

This is many times the number of French citizens in the Soviet Union, and this pattern is reflected in most other Western countries, where the Soviet Union risks disproportionate damage in any prolonged tit-for-tat exchange, because it has more pawns to lose.

Even without covert espionage, the Soviet Union and its allies enjoy an enormous advantage operating in open societies where vast amounts of potentially useful political, technological and military information are available in the Press and public archives.

The Soviet Union alone employs over 20,000 highly-trained technical translators in a special Moscow institute which does nothing but translate technical magazines, the rival bids of competing Western companies seeking Soviet contracts

and the kind of information covered by military publications like Aviation Week which are considered so useful that they are allotted to Moscow.

The Soviet Union's appetite for military, technological and industrial espionage appears to have been whetted in recent years by concerted Western attempts to tighten restrictions on high technology exports to the Soviet bloc.

This has sharpened the Soviet awareness that it risks falling further behind the electronic and micro-chip revolution which is transforming not only the basis of Western economies, but also laying the basis for the kind of military competition of the future as recently unveiled by President Reagan.

Whatever the perceived need for a more effective espionage effort, however, recent events have advised the Russians to be more discreet.

A further warning is expected today from West Germany when the parliamentary control commission on intelligence matters meets to consider whether the country should join other Western countries in expelling some of the 238 known and 199 suspected Soviet bloc agents serving under diplomatic or quasi-diplomatic cover.

Journey's end for Moskvitch

BY OUR MOSCOW CORRESPONDENT

THE SOVIET politburo has finally approved long-standing plans to replace the ageing Moskvitch car with a new front-wheel-drive vehicle.

The new model, designated the AZLK-2141, will be a five-door hatchback with a new 50 hp transverse engine. It will be some 120 mm wider than the present Moskvitch model with a passenger area similar to the recently facelifted Volga model.

The new model is seen partly as a replacement for the Moskvitch but also as a lighter, faster and more comfortable alternative to the Volga, currently the largest passenger car on sale. Extensive use of plastics and other light-weight materials will keep the overall weight 350 kg below that of current Volga models.

The new engine is designed to run 150,000 kms between major overhauls. The combination of light-weight, streamlined body shell and new engine is expected to produce a marked improvement in fuel consumption.

The Leninetsi Komsomol plant in the Moscow suburbs, which assembles around 140,000 Moskvitch cars annually, will be extended to produce the new model, but details are not available of the planned production target or of the date of first delivery.

Meanwhile, re-tooling is also taking place at the Togliatti car plant 400 kms east of Moscow for the new two-door VAZ-2108 model which will be the first Soviet front-wheel-drive car to be put in series production when output starts at the end of this year.

Now Dictaphone do for word processing what they did for dictation

You can't become the leading name in dictating equipment without learning what's best for the office.

So if you link years of know-how with the most advanced word processing technology available, you're sure to end up with a very special machine.

The revolutionary Dictaphone 6000.

Our new word processor can do everything that other WPs can do. Usually faster. More often, better.

It can handle words and numbers. It can edit, arrange, select, count, file, print and answer questions.

And it has an astonishing range of optional features most other WPs haven't even thought of.

Like checking the operator's spelling and a by-pass selector to speed up commands.

But it has something that makes it more than simply a word processor.

The 6000 can take on a whole range of micro-computer functions like data processing. It can exchange information via other terminals and computers, even mainframes.

In fact, our new 6000 could form the basis of the ultimate communications system. At a very realistic price of just £3900.

Sheraton wins on style in North America.

TORONTO	NEW YORK	CHICAGO
The Sheraton Centre of Toronto A world-class hotel ideally located in the city's business, shopping and entertainment centre. Fine dining and relaxation in seven restaurants and lounges, including the Winter Palace Restaurant for fine cuisine and The Redwoods for hearty fare. Indoor/outdoor pool and health club. For the ultimate in elegance and personal service—there's the Sheraton Towers, a luxurious, private hotel-within-a-hotel.	St. Regis-Sheraton Hotel A New York landmark on Fifth Avenue in the tradition of a European hotel. Meet in shopping and business. A blend of turn-of-the-century grace and the glamour of contemporary New York. Enjoy Broadway Revues at the King Cole Restaurant; light lunch or late-night dancing at Astor's. A Mobil four-star award hotel.	Sheraton International at O'Hare A hotel designed to meet the needs of today's business traveler. Next to O'Hare Airport, a short ride from arrival gates via courtesy transportation. Near business, industry, shopping and entertainment. There are a choice of restaurants for quick service or elegant, leisurely dining; a lounge with entertainment and spacious guest rooms. Indoor swimming pool.

To make a confirmed reservation, call Sheraton's on-line computer reservations system—Reservation III.

In London: 01/636-6411

Help sought for Soviet coal project

By John Davies in Frankfurt
THE SOVIET UNION has told West German industrialists and bankers that it may be interested in their help to develop a large-scale project to turn Siberian brown coal into petroleum or gas.

The deal would be in addition to the existing controversial project in which West German companies are helping to build a pipeline to supply Soviet natural gas to Western Europe.

A number of companies with know-how in coal liquefaction and pipeline construction have had discussions with the Russians about plans to exploit the Kansk-Achinsk coalfields.

One company, Lurgi, the process plant manufacturer, said yesterday that discussions had taken place several months ago but no contracts had been signed or were likely to be signed in the foreseeable future.

Lurgi dismissed as "fantasy" suggestions in some West German newspapers that German companies could get as much as DM 400m (£10.5bn) worth of business.

"If the first stage of the project amounted to DM 2bn to DM 3bn, that would be good business," a Lurgi representative said.

The figure of DM 400m was possibly a very long-term and all-embracing estimate of the cost of the whole project, he said.

Lurgi indicated that there was a pause in the talks at the moment, but that talks were taking place now between the Russians and West German bankers on possible finance for the project. Dresdner Bank said yesterday it would be interested in taking part in any consortium to finance such a project.

According to reports in the West German Press, the Russians would be interested in paying for German assistance through deal: they would want to pay with fuel produced from the project itself or with crude oil from other Soviet sources.

Anthony Robinson adds:

At Kansk-Achinsk and Ekibastuz in southern central Siberia the Soviet Union possesses some of the world's largest deposits of lignite and low quality coal amenable to open cast mining. But they lie thousands of kilometres from the industrialised West and the sea.

Present plans call for the construction of giant coal burning power stations close to the mines and long distance high voltage transmission lines to the West.

France snubs U.S. over seven-nation ministerial talks

By John Wyles in Luxembourg

FRANCE yesterday delivered a calculated snub to the U.S. by announcing that it would boycott a seven-nation ministerial meeting in Paris next month of Trade and Finance Ministers, proposed by the Reagan Administration.

M. Claude Cheysson, the French Minister for External Affairs, said last night that France would not support any attempt to "institutionalise" the world's economic summit system.

Although the U.S. has denied that it intends any connection between the Paris talks on May 10-11 and the world summit in Williamsburg, Virginia, on May 28-30, French suspicions have been aroused by the attempt to limit attendance in Paris to the seven nations of the summit.

U.S. diplomats say that Washington is aiming at the start of an in-depth review by the world's leading industrialised countries of the key links between financial and trade policies.

France and several other European countries believe, however, that part of the U.S. aim is to press the Europeans towards a more restrictive approach on East-West trade, which would subsequently be confirmed at Williamsburg.

France's boycott has the support of the six small EEC members which do not attend world

summits. Other Ministers were beginning to doubt last night that the talks could now take place. Sir Emilio Colombo, the Italian Foreign Minister, appeared to be highly sceptical, although Mr Francis Pym, the British Foreign Secretary, confirmed that the UK intended to be present.

The French move is seen partly as a protest at the lack of flexibility in U.S. positions on key economic and commercial issues in the run-up to Williamsburg. M. Cheysson implied last night that the White House was not listening to EEC warnings that East-West trade issues should not be allowed to dominate the summit.

France is also desperately concerned about the impact of high U.S. interest rates and the continuing strength of the dollar.

Mr Pym claimed last night that he had secured agreement from his fellow EEC Foreign Ministers that they would try next month to agree a rebate on the UK's payments to the EEC budget this year.

He said that the Ten were "on course" for achieving the second round of the EEC summit in Brussels last month, which appeared to promise the UK agreement on a rebate before the next summit on June 6-7.

Production quotas for EEC steel to stay

By Paul Cheseright in Luxembourg

PRODUCTION QUOTAS and minimum price guidelines for EEC steel manufacturers will continue, EEC industry ministers agreed yesterday.

But they could not settle either for how long this regime should last, or exactly how it should operate.

The ministers were discussing, at a special meeting in Luxembourg, a proposal from the European Commission that its control over production and prices should continue after its present powers expire in June until the end of 1985.

By that time, the EEC is committed both to substantial cuts in capacity and the elimination of subsidies for the steel industry.

Eurofer, the EEC steel manufacturers' federation, agreed last week to an extension of the Commission's control, taken in 1980 under article 58 of the European Coal and Steel Community Treaty.

But Count Otto Lambsdorff, the West German Economics Minister and president of the meeting said: "I am confident we shall agree to extend the system—whether it will be for two and half years I don't know."

The Council of Ministers has asked the Commission to put forward by May 25 proposals for the continuation of the system "which take account of the restructuring already accomplished in the programmes approved by the Commission, and the aid given."

This reflected a move towards both the British and French views and away from the Commission idea that the existing system of controls will just carry on. But it is clear that tough negotiations lie ahead and that the ministers may need more than one meeting to reach agreement.

The UK argued yesterday that its restructuring of the steel industry had gone further than that of other EEC member states and that recognition should be given to this.

France first argued that the control system could not be extended but then softened its position. It is thought to be concerned about the possibility of any cuts in its national quotas.

"We are not prepared to be tied down to a quota system based on the patterns of trade three years ago," Mr Patrick Jenkin, the UK Industry Secretary said after the meeting.

AT&T to close its largest Irish plant

By Brendan Keenan in Dublin

THE U.S. telecommunications giant, American Telephone and Telegraph, has announced plans to close the largest of its three Irish plants, with a loss of 300 jobs.

AT&T moved into Ireland only 18 months ago when its subsidiary AT&T International acquired, for an undisclosed sum, Teletel, a company founded by two former Irish Post Office engineers to manufacture telecommunications equipment.

At the time, the move was seen as a means of establishing a European base for AT&T, from which it could become involved in European and world markets for advanced equipment.

The company said in Dublin that Teletel had been losing an average, ECU (\$3.6n) a year and this year's losses were expected to be higher. AT&T was originally looking for 200 redundancies at its Dublin plant but has now decided on closure.

AT&T blamed a continuing shortage of orders in the international market. Teletel has two other plants in the west of Ireland, employing about 200 people, but these are mainly involved in supplying equipment for the Irish telecommunications development programme.

The Irish Industrial Development Authority (IDA) has called on AT&T to postpone the closure and it is possible that a rescue attempt will be made. A U.S. spokesman for AT&T said the closure would have no impact on the company's corporate and marketing plan in Europe.

Standard and Poor's, the U.S. credit rating agency, has reaffirmed the triple-A ratings on all the outstanding long term debt of AT&T and its Western Electric subsidiary, writes Richard Lambert from New York.

Moody's Investors Service, the other big rating agency, caused a brief furor last month when it downgraded AT&T's Triple-A status.

Doubts over French fast breeder

By David Marsh in Paris

NUCLEAR energy officials from 24 countries visiting France's ambitious fast breeder nuclear reactor project near Lyon last week were torn between awe at the scale of the achievement and feelings that the FF 150n (£1.5bn) plant may turn out to be a white elephant.

The nearly completed Super-Phenix power station at Creys-Malville in the Rhone Valley will be the West's first commercially operating fast-breeder reactor when it starts producing electricity next year.

Boosting a concrete dome which occupies an area 24 times larger than that of St Peter's in Rome, the 1,200 mw plant is the closest approximation to a cathedral which late 20th century engineering has been able to produce.

But even nuclear energy acolytes from the 24 nations of the Organisation for Economic Co-operation and Development, touring the complex as part of the 25th birthday conference of the OECD's Nuclear Energy Agency, were on the whole sceptical about the plant's immediate usefulness.

The general consensus was that the French have brought the project to fruition about ten or 20 years ahead of its time.

Fast breeders, using as fuel a mixture of plutonium and burnt uranium from pressurised water nuclear plants, offer electricity utilities con-

siderable fuel savings. Because of the recycling of spent fuel, the amount of energy produced per pound of natural uranium is 50 to 80 times larger in fast breeders than in the "first generation" nuclear reactors.

Fast breeders are, however, immensely expensive, generating electricity at about double the cost of other types of nuclear plants.

Because their operation centres on the commercial use of plutonium obtained from the reprocessing of spent uranium, fast breeders are surrounded by greater than normal risks of proliferation of nuclear weapons.

And at a time when oil has cheapened, the price of uranium is still hovering around \$20 a pound (half the level of three years ago), and budgetary funds are in short supply, fast breeders can easily find themselves as the target of government spending cuts.

Mr Michel Pecqueur, the head of France's Atomic Energy Commission, told the conference that fast breeders were needed to reduce countries' energy vulnerability by stabilising uranium needs.

He announced the setting up of an international study group among Western nations pioneering fast-breeder technology in order to rationalise research and harmonise standards.

Additionally, he said the Commission was pursuing necessary

Michel Pecqueur

studies to allow the Government to take a decision around 1988 on building a second commercial fast breeder.

Mr Remy Carle, a director of Electricite de France, made clear that the next stage of commercialisation of fast breeders would need to involve "integrated sites" combining both reactors and specialised reprocessing facilities.

However, even a committed supporter of fast-breeder technology, Mr Tom Marshall of the UK Atomic Energy Authority, told the conference that serious

ordering of commercial plants would not take place until the beginning of the next century.

An official from West Germany—which has a one-sixth share in the Creys-Malville project—remarked that, because of the present economic slowdown, utilities were not interested even in financing fresh or pressurised water nuclear reactors, let alone the fast breeder.

A senior international energy civil servant commented that M. Pecqueur's remarks amounted to "whistling in the dark."

Because France's Socialist government is highly suspicious about fast-breeder technology, and is anyway about to decide a drastic slowdown in the country's programme on conventional types of nuclear energy, his view was that the pro-fast breeder lobby in the Atomic Energy Commission was becoming increasingly isolated.

Britain is carrying out research into a commercial fast breeder project based on a more compact design than the French one. British officials in private were saying that France would not achieve hoped-for economies from fast-breeder technology because of the present lack of specialised facilities to separate plutonium from spent breeder fuel.

France reprocesses spent fuel from its existing prototype Phenix fast breeder at a plant in Marcoule in the south.

Hitler's 'diary' find sparks fierce W. German debate

By Jonathan Carr in Bonn

"HITLER on love, Goebbels, his own publication of the Eva Braun—all rubbish!" "Hitler records."

However, the British historian Mr Hugh Trevor-Roper, now Lord Dacre, who had previously stressed he believed the diaries were genuine, indicated yesterday there must now be some doubts about the matter.

Mr Trevor-Roper, author of "The Last Days of Hitler," said he had understood that the person who had recovered the documents from the plane had been the person who had handed them on to Stern.

In an effort to convince the sceptics, who include several noted West German historians, the weekly magazine Stern held a Press conference yesterday coinciding with the start of

Glemp warns of danger at May Day demonstrations

By Christopher Sobinski in Warsaw

CARDINAL Jozef Glemp, at the Lenin shipyard in Gdansk before his expected return to work.

The authorities are maintaining their propaganda campaign against Solidarity's underground movement, while the arrest of Mr Jozef Piniar, the leader in Wroclaw, in southwestern Poland, is a setback for preparations there.

The thrust of the official media campaign is the alleged misuse of funds by Solidarity and the charge that the clandestine movement has embezzled and wasted funds in support of a luxurious life-style.

He has a new form of energy, a new way of thinking, a new course, and the solution fulfils his expectations.

Just as in the world of technology, scarce supplies of raw materials, expensive sources of energy and an increasing awareness of our environment are constantly posing new demands, Scientists and engineers at Mannesmann are contributing substantially towards the solutions through professional diligence and a strong personal interest.

With the development of energy-saving, environmentally sound processes for metal making and raw material recycling, with high-performance measuring equipment and automation systems, with easily operated terminal systems which help to rationalize office work, and of course, with starting materials for pipe and tubing that have to hold their own under extremely adverse conditions. Fuel element cladding tubes in nuclear power stations, tubes with a high creep rupture strength for the gasification of coal, and large-diameter pipes that bring oil and gas from arctic regions to where it is needed.

New tasks – new solutions.

Nakasone may bend to pressure for general election

TOKYO — Prime Minister Yasuhiro Nakasone, despite personal unpopularity with voters, may call a snap general election after his party did well in weekend local elections, political analysts said yesterday.

They said Nakasone, whose personal following has slumped after a series of controversial right-wing comments on national defence, may have to yield to pressure for a general election from powerful sections of his conservative Liberal Democratic Party (LDP).

In mayoral elections in 145 cities, 99 of which were contested, LDP candidates maintained their previous record. But conservative independents backed by the LDP won eight cities more than the 94 they previously held.

Results in tens of thousands of local council seats, which were still being tabulated, will have a minimal effect on national politics.

But the mayoral results will give former premier Kakuei Tanaka, who controls the biggest faction in the LDP, fresh ammunition for his demand for a lower house election in June.

Tanaka wants the elections held at the same time because more voters would be likely to turn out, which in the past has favoured the LDP. He also wants to cement his position as Japan's most powerful politician in case he is convicted in a court

judgement expected later this year.

Tanaka, instrumental in getting Nakasone elected as Prime Minister last November, is accused of taking more than \$2m from the U.S. Lockheed Corporation in the early 1970s to influence a Japanese airline into buying Lockheed aircraft.

The former premier packed Nakasone's 20-member cabinet with six of his followers and also filled the upper echelons of the party hierarchy with his men.

Nakasone, leader of one of the smallest factions in the party, has been reluctant to go to the people because of his unpopularity and because, analysts said, he does not want to give Tanaka an opportunity to obtain even more power.

Other faction chiefs, including former premier Takeo Fukuda and Takeo Miki, feel the same way and have publicly said the lower house should continue until scheduled elections in 14 months.

Analysts said Nakasone was considering Tanaka's call for an early election, but was unlikely to decide finally until he returns from a trip to south-east Asia early next month.

They said the LDP, which has ruled Japan since its formation in 1955, was likely to retain power in an election but could lose some of its 284 seats in the 511-seat lower house.

Meeting for Shultz and Mubarak today

By Charles Richards in Cairo

MR GEORGE SHULTZ, the U.S. Secretary of State, holds talks with President Hosni Mubarak of Egypt this morning following meetings in Cairo yesterday at the start of a tour of Middle East countries, his first since taking office.

Shortly after his arrival, Mr Shultz met U.S. ambassadors to countries in the region, and President Reagan's two special Middle East envoys, Mr Philip Habib and Mr Nicholas Veliotes.

In a statement at Cairo airport, Mr Shultz said: "President Reagan sent me here to show America's determination to help in the process of peace in the Middle East."

"We know that we cannot substitute for the commitment and effort of the people of the Middle East, we will complement it and play our full part as full partners of this great enterprise to achieve peace."

He did not give any indication what hopes he had for achieving progress on any of the main issues, including withdrawal of foreign forces from Lebanon or the wider peace process. Instead, he talked in general about the value of negotiation to achieve aims.

"Just a year ago, Egypt had the Sinai returned to her as a result of a peace treaty with Israel. In that act Egypt and Israel taught the world a lesson. That lesson is that negotiations work. The political process can achieve things that violence and rejection will never achieve."

Reuter reports from Bahrain: Two senior Jordanian ministers continued a shuttle around Gulf capitals yesterday as part of the latest drive by moderate Arab leaders and the U.S. to revive efforts for a lasting peace.

Jordan's Information Minister, Adnan Abu Odeh, arrived in Bahrain with a message for the island's ruler from King Hussein on the latest developments. He had given similar messages to the rulers of Qatar and the United Arab Emirates yesterday.

Jordanian Foreign Minister, Marwan Al-Qasbi, meanwhile, left Riyadh for Sana, North Yemen, after meetings with King Fahd and Saudi Foreign Minister Prince Saud Al-Faisal, the official Saudi press agency reported.

Nora Benayon reports from Beirut: Tripartite U.S.-Lebanese-Israeli talks resumed in Khalde, south of Beirut yesterday with much hope pinned on Mr Shultz's trip.

Lebanese officials have been complaining about the sluggish efforts to persuade foreign forces to depart and ministers have privately intimated that Moscow is trying to increase its influence.

Charles Richards finds dissension in the Sinai on first anniversary of its return to Egypt

The palm trees are dying, say the Bedouin

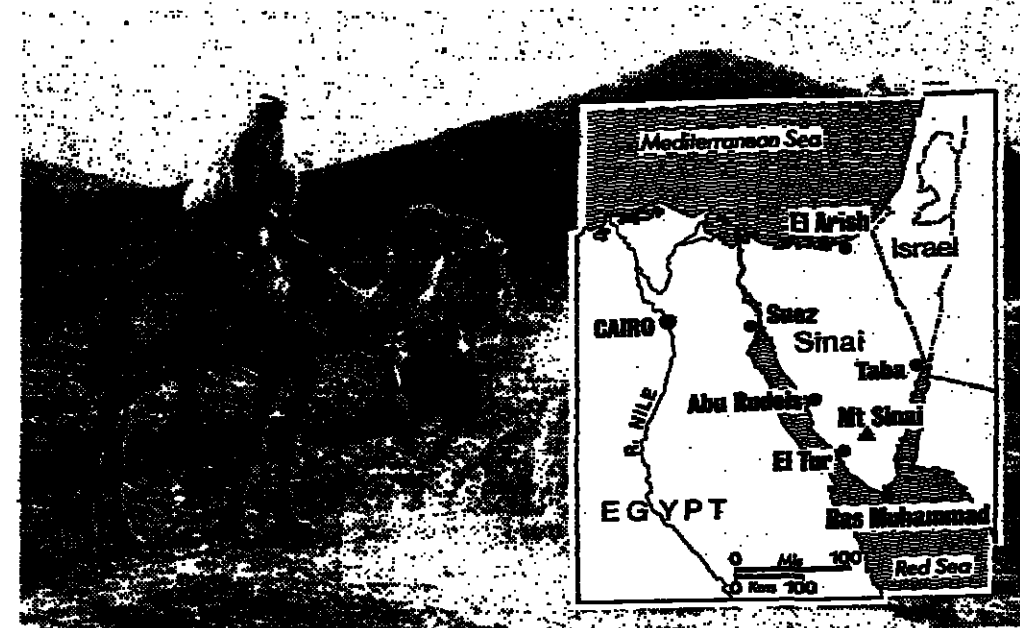

WHEN PRESIDENT Hosni Mubarak of Egypt went to El Arish in Northern Sinai on Saturday, tribal leaders grumbled openly that life had been better under Israeli occupation and that the Egyptian Government's development schemes had not benefited them.

Mr Mubarak retorted that he was there to celebrate the anniversary of the final liberation of Sinai on April 25 1982. This was neither the time nor the place to air grievances—their action was shameful. He then ordered security men to clear the auditorium of the embarrassing presence of the foreign press.

The criticisms were the most outspoken in public since Mr Mubarak took office, and demonstrated the divide between Sinai and the Nile Valley. The much-vaunted development projects were intended to bridge the gap—but, referring to claims in the Press that irrigation water was being piped along the northern coast, one Bedouin declared: "The palm trees have died, Mr President."

The Bedu had more work under the Israelis. Smuggling was easier and they were better treated. The 160,000 to 200,000 people who live in the 60,000 square km peninsula are Arabs from at least a dozen tribes, racially and culturally distinct from the Nilotic peoples. The Israelis may have looked upon them as an endangered species; many "Egyptians" look down on them as an inferior race.

For 19 years Egyptians had dreamt of the eventual liberation of the Sinai, captured by Israel in the 1967 war. For the late President Anwar Sadat its recovery took on a mystic significance. The Sinai was to

become a symbol of peace. He spoke of "the sacred land" and planned a religious complex for Muslims, Christians and Jews atop Mount Sinai.

The land was to be developed, so that barren wilderness would flow with milk and honey. The ground itself was to yield the mineral wealth of King Solomon's mines. Egyptian pioneers would break out of the narrow confines of the Nile valley and spread across the desert. Two people would be setting the wastes.

These pipedreams evaporated with Mr Sadat's death. Relations between Egypt and Israel have soured since Israel's invasion of Lebanon and a border dispute at Taba still rages.

The Egyptian army is building a complex network of defensive positions along the line from El Arish to Ras Muhammad in the south. A multinational force is deployed to report on treaty infractions.

Egypt first began to enjoy the Sinai before the final withdrawal when the end of hostilities led to the reopening of the Suez Canal. The canal will earn \$1bn this year. After the first withdrawal, Israel handed back the Abu Rudeis oilfield. The first oil from a discovery by a consortium of Deminor of West Germany, British Petroleum and Shell was shipped from Ras Budran off the Sinai coast earlier this month.

The task of reconstruction is formidable. Before the Israelis left, they plugged 35 wells with concrete, according to Egyptian officials, and blew up three pumping stations. The Sinai Development Authority, according to its chairman, Dr Ali Abu Zeid, has bored 42 wells, enough to irrigate 1,000 faddams (acres).

Dr Abu Zeid identifies four main areas for the future of Sinai: agriculture, tourism, industry including mining, and fishing with agriculture the most favoured because it is the most labour intensive. The population of Sinai is projected to reach 1m by the year 2000, and with an average family of five, 160,000 new jobs will be needed.

about \$100m a year over the past three years on schools, administrative buildings, supermarkets, hospitals, religious institutes, banks and bakeries, which are being hastily erected to transform the wilderness Bedouin settlement of El Tur into the capital of the South. Agriculture will be limited by the lack of water, which has to be pumped from the Nile Valley. A plan for the development of Sinai financed by a \$5m U.S. grant identifies 500,000 faddams as suitable for agriculture.

Suitable crops include date palms which need a lot of water but tolerate high levels of salinity. Olive oil production could be improved through better refining methods.

Mineral deposits include copper, sulphur, manganese, glass sand, lead, turquoise, gypsum and coal, mainly low quality and inaccessible.

Coal deposits at El Maghara are 27m tonnes, of which 21m tonnes are mineable reserves, according to a feasibility study just completed by British and Egyptian geologists put the reserves at three times this in the area around the test area. The existing coal mine could be reopened at a cost of £250m (\$77m) and Egypt is looking for a partner to develop it. Britain, West Germany or France to invest in the mine.

Perhaps the greatest potential lies in tourism, particularly along the Southern coast, celebrated for some of the finest coral in the world. Egypt is looking for a partner to develop it. Britain, West Germany or France to invest in the mine.

Perhaps the greatest potential lies in tourism, particularly along the Southern coast, celebrated for some of the finest coral in the world. Egypt is looking for a partner to develop it. Britain, West Germany or France to invest in the mine.

India faces opposition to borrowing application

BY K. K. SHARMA IN NEW DELHI

INDIA faces stiff opposition to its plans to borrow up to \$2bn from the Asian Development Bank in the next five years.

Objections have come from the U.S. and smaller Asian countries which are the traditional beneficiaries of the institution's loans. But the Government has decided to go ahead with its application, and will press it at the next annual general meeting of the bank in Manila from May 4 to 6.

The U.S., which is the largest donor to the ADB's funds, has made its opposition to India's plans known in official statements from Washington. Other Asian countries feel their share of ADB loans is bound to be affected by New Delhi's enormous needs, which arise from its difficult foreign exchange reserves position. This forced India to take a three-year \$5.7bn loan

from the International Monetary fund in 1981.

India is the third largest subscriber to the ADB's ordinary capital resources after the U.S. and Japan and has so far voluntarily abstained from borrowing from it, so that smaller Asian countries can benefit.

Officials maintain that India has never abandoned its right to borrow from the ADB and needs loans now.

India will not seek any funds from the ADB's soft-loan window, and will restrict its borrowings from ordinary funds, which carry an interest rate of 11 per cent. Despite this, controversy seems unavoidable.

A major reason for India's attitude is the uncertainty over the future of the World Bank's soft-loan affiliate, the International Development Association (IDA).

Jordan's Information Minister, Adnan Abu Odeh, arrived in Bahrain with a message for the island's ruler from King Hussein on the latest developments. He had given similar messages to the rulers of Qatar and the United Arab Emirates yesterday.

Jordanian Foreign Minister, Marwan Al-Qasbi, meanwhile, left Riyadh for Sana, North Yemen, after meetings with King Fahd and Saudi Foreign Minister Prince Saud Al-Faisal, the official Saudi press agency reported.

Nora Benayon reports from Beirut: Tripartite U.S.-Lebanese-Israeli talks resumed in Khalde, south of Beirut yesterday with much hope pinned on Mr Shultz's trip.

Lebanese officials have been complaining about the sluggish efforts to persuade foreign forces to depart and ministers have privately intimated that Moscow is trying to increase its influence.

Grim prospects for Iranian border town

BY KATHLEEN EVANS IN DEZFUL, IRAN

"WE ARE willing to continue this war for 20 years," says a slogan on the barracks wall at Dezful Air Base. It is a grim prospect—last Wednesday night, this town of silver birch trees and green fields suffered its 51st Iraqi missile attack which left 15 villagers dead and more than 100 wounded.

For a town which is so close to the front line and has one of Iran's most important air bases, Dezful looked remarkably peaceful. The runway itself was empty save for one helicopter and two small vintage propeller-driven aircraft, and the only sound was the buzzing of crickets in the grass.

At the terminal, a handful of soldiers—one with roses in his machine gun—were on hand to meet a party of journalists

accorded a rare visit to the region.

On Thursday, shops and houses were firmly locked up as local inhabitants gathered for the funeral of the new "martyr". A list-waving crowd of more than 10,000 people surged past the journalists, shouting slogans against the U.S. and the Soviet Union. President Saddam Hussein of Iraq, France and Israel—in that order. The demonstrators were strictly segregated, the women in black chadors passing after the male mourners.

In private asides, however, Dezful villagers clearly seemed weary of the continuing war. One woman who had lost a son at the front eight months ago asked why the Baghdad government did not conduct its war against the Iranian govern-

people. "The Iranian people want peace. This nation does not want to continue fighting," she said sadly.

possible survivors. "Why do you come?" he demanded of an Iranian television crew. "What difference does it ever make to us?"

Despite such comments, the religious fervour of the revolutionary guards remains irrefragable. One 22-year-old man in the local hospital with broken legs and chest injuries told the constancy of God and the Imam Ayatollah Khomeini, and threatened to pursue journalists in the next world if his slogans were not faithfully recorded.

More than 37 people were killed and another 210 injured in the latest Iraqi attack on Dezful last Friday. Reuter adds. But Mr Ali Akbar Velayati, the Iranian Foreign Minister, said Iran would not retaliate.

Hopes for talks on oil slick

By Mary Frings in Bahrain

HEALTH MINISTERS and environmental experts from Iran, Iraq and the six Gulf co-operation council states have been called to a meeting in Kuwait today in another attempt to tackle the oil spillage threatening Gulf shores.

The Regional Organisation for Protection of the Marine Environment, which is co-ordinating the conference, said the meeting would be formally convened only after the eight member states show signs of reaching a consensus on signing an agreement.

During talks in Kuwait earlier this month, Iran rejected Iraq's additional ceasefire offer and said it only wanted a guarantee that the repair team would not be fired on when it went in to fight fires and cap the leaking wells in the Nowruz field.

France opposes conditions on Namibia independence

PARIS — France yesterday strongly criticised the United States and South Africa for demanding that independence for Namibia (South West Africa) should be linked to the withdrawal of Cuban troops from neighbouring Angola.

M. Claude Cheysson, External Relations Minister, speaking at the opening of a United Nations conference on Namibia, said France could not accept the demands and pretexts being placed in the way of independence for the South African territory.

"This statement, which will most likely be criticised, does not mean my country is unaware of the problems which will come up immediately after independence," he said.

"But it means that accession to independence and the application of the security council's resolution cannot be held up by other considerations."

"It is not appropriate that

Gloomy economic outlook faces Mozambique party

BY QUENTIN PEEL, AFRICA EDITOR

A COMPREHENSIVE report on the plight of the Mozambique economy and the security problems caused by South African-backed guerrillas will be presented to the 10th Congress of the country's ruling Frelimo party.

The congress, which opens today and is the first for six years, will draw up economic and social directives following a wide-ranging and often highly critical debate in party organisations throughout the country.

Debate is likely to focus on the lack of encouragement given to traditional peasant farmers in producing both food and export crops. Also under scrutiny will be the growth of flourishing black markets in consumer goods because of the inefficiency of state marketing organisations and supply shortages, and the problems created

by a top-heavy centralised bureaucracy. In his recent budget speech, Mr Rui Balthazar, the Minister of Finance, spoke of the need to reorganise the whole of government pricing policy of the Bank of Mozambique, called for rationalisation of the civil service.

President Samora Machel has also returned to familiar themes criticising lack of co-ordination and red tape in government offices.

Slogans in Maputo, which has been given a fresh coat of paint for the congress, concentrate on the struggle against twin forms of "banditry"—the armed activity of the South African-backed Mozambique National Resistance (MNR), operating in nine of the 10 provinces, and the "unarmed banditry" of the black marketeers.

Wong Sulong in Kuala Lumpur assesses a commodity producer's economic prospects

Malaysian growth hinges on wider recovery

MALAYSIA is cautiously optimistic that the economy will show a 5 to 6 per cent growth rate this year. This would be higher than last year's 4.6 per cent increase, which was largely due to a recovery in the rubber sector.

As an oil exporter Malaysia expects export receipts and government revenue to be adversely affected by the fall in oil prices, but hopes to gain if the lower prices encourage a more sustained world recovery.

Oil comprises 28 per cent of total Malaysian exports, making it substantially less dependent on oil and gas for foreign exchange earnings than neighbouring Indonesia.

But current production—about 330,000 barrels a day, with 270,000 barrels exported—would mean a revenue loss of over \$500m a year.

In addition, following the start in January of liquid natural gas exports to Japan, the 1.7m tonnes of LNG to be sold this year will fetch \$310m instead of the projected \$440m.

Against these revenue losses the Government would expect to recover some \$170m by reducing subsidies for local diesel and kerosene.

The real benefit to the

Malaysian economy, however, would come from a sustained recovery in the industrialised countries, which would give a strong boost to Malaysia's other exports.

The rubber price, for example, has moved steadily upwards from an average price of 201 Malaysian cents per kilo in 1982 to breach the 260-cent mark in the first week of April.

At 200 Malaysian cents a kilo, more than a million rubber smallholders and tappers live at subsistence levels, and the government receives little in the way of export duty.

At 260 cents, farmers' incomes are tolerable, plantations should pay reasonable dividends, and \$220m would accrue to the government, based on an export volume of 1.5m tonnes of rubber.

Similarly, tin prices have risen by 7 per cent so far this year, and timber prospects are looking up with reports of increased housing starts in the U.S. and Japan.

Set against any brighter export outlook, the balance of payments and government budget can be expected to remain under strain.

Last year, the country suffered a record balance of pay-

ments deficit on current account of \$3.4bn. This year a deficit of \$2.6bn is expected.

Foreign exchange reserves at the end of last year stood at more than \$4bn, equivalent to four months' imports. Though this is a healthy balance, it is nowhere near the levels of the early 1970s, when reserves covered nine months' imports.

On the budget front, the authorities now acknowledge that government expenditure for the past five years had expanded too rapidly, leading to considerable wastage and high inflation rates.

The 1983 federal budget accounted for 30 per cent of the country's GNP, but sharp cuts were made in 1982 to trim this proportion to 18.7 per cent.

In resorting to local and external borrowing to cover the deficits, the external debt rose by 70 per cent in 1981, and another 58 per cent in 1982 to a record \$5.7bn—equivalent to 23 per cent of GNP. The external debt servicing ratio rose from 2.6 per cent of total exports in 1981 to 4.5 per cent last year.

Though the debt and the servicing ratio remain small by international standards, they were sufficiently worrying for Bank Negara, the central bank,

Reagan aims to regain control over Congress

BY REGINALD DALE, U.S. EDITOR IN WASHINGTON

PRESIDENT Ronald Reagan will pull out all the political stops this week in an effort to regain control over a Congress that is increasingly slipping from his grasp on vital issues ranging from his 1984 budget to his controversial policies on Central America.

Following last week's dramatic rejection of his \$849m (1983m) fiscal 1984 budget by the key Republican-dominated Senate Budget Committee — a major slap in the face for the White House — Mr Reagan now says he will "marshal every resource of our Administration" to try to retrieve the situation on the floor of the Senate.

The Senate will probably start a full-scale debate on the budget on Thursday, which could last for as long as two weeks before a final vote.

On Central America, Mr Reagan is planning a major address to a rare joint session of both Houses of Congress tomorrow night.

There have only been nine such sessions, not counting the annual State of the Union messages, since World War II — usually convened only in emergency situations that underline the seriousness of the political stakes for which Mr Reagan is playing. The White House yesterday described the situation in Central America as "critical".

He is expected to draw together all the Administration's recent arguments in favour of the moral and security imperatives of a stand against Communism in the U.S.'s "own backyard", adducing as much evidence of Soviet/Cuban interference in the area as possible.

There are serious doubts, however, as to how far he will be able to head off the growing and determined rebellion against his policies of overt military aid for the El Salvador Government and covert aid for the right-wing guerrillas fighting the Sandinist Government in Nicaragua.

A key House sub-committee decided to vote today on \$80m of the \$11m Mr Reagan is asking in urgent military aid for El Salvador, without even waiting to listen to his speech.

On both fronts, Congress, which Mr Reagan could head to his will in the first year of office, is showing unmistakable signs of asserting its own independence.

This comes largely as a result of the growing unpopularity of the President's Central American and defence spending policies, as the 1984 Presidential and Congressional elections begin to cast their shadows forward.

A major feature of recent weeks has been the defection on both issues of previously loyal Republican lawmakers.

On Thursday, the House is once again to resume its long-running debate on a resolution to "freeze" the nuclear weapons of the two superpowers at current levels.

Despite a strenuous Administration campaign against the non-binding resolution, it will almost certainly pass the Democratic-dominated House, although Mr Reagan may be able to head it off in the Republican-led Senate.

Mr Reagan's budget was defeated last Thursday by a surprising 124 vote in the Senate Budget Committee, after committee Republicans could not agree on a tax compromise.

The committee adopted a demagogically-inspired alternative that would increase taxes by \$30bn in 1984, and more in later years.

This would jeopardise the third and final cut in Mr Reagan's three-year tax reduction programme, sharply reduce the growth of defence spending and increase domestic spending much more than Mr Reagan wants. The measure closely resembles a budget resolution already passed by the House.

Venezuela and Mexico to tighten oil and loan terms

BY KIM RUAD IN CARACAS

VENEZUELA and Mexico will tighten terms, conditions and interest rates on new oil and soft loans to nine central American and Caribbean nations since 1980 at an annual cost of more than \$400m (\$286m), according to diplomats.

Sr Humberto Calderon Berti, Venezuelan Energy Minister, and his Mexican colleague, Sr Francisco Labastida, have announced that the supply agreement is under review, but no official statement has yet been made on precise changes.

A rebate of 30 per cent of the cost of 160,000 barrels-per-day of oil now advanced to the nine nations is expected to be cut by 10 per cent while long-term financing programmes will be halved to 10 years, the diplomats say.

Under the present agreements, which expire next August, Venezuela and Mexico provide Barbados, Costa Rica, the Dominican Republic, El

Salvador, Guatemala, Honduras, Nicaragua, Panama and Suriname with the oil plus five-year loans at 4 per cent interest in the form of the rebates on the price of the oil.

These loans, in turn, may be converted into long-term financing at 2 per cent with a five-year grace period if the money is used for energy development projects.

Venezuela, which has assigned \$650m for energy development projects under the oil supply accord, has taken the lead in toughening terms. Earlier this year, it suspended conversion of short-term loans pending a review of the impact of the new oil price structure on the market.

Venezuela also suspended shipments of 14,000 b/d to Nicaragua last year due to lack of payment of \$13.7m plus interest owed. The oil is now being supplied by Mexico which has taken a more flexible position than Venezuela.

Figueiredo in new bid for Central American peace

BY ANDREW WHITLEY IN RIO DE JANEIRO

PRESIDENT Joao Figueiredo of Brazil today begins an official visit to Mexico which is expected to result in a considerable increase in bilateral trade. It could also lead to a closer involvement of Brazil in the search for a peaceful settlement of the Central American conflict.

Last week's potentially highly-embarrassing incident involving the seizure of Libyan aircraft carrying weapons to Nicaragua brought home to Brazil how difficult it is to avoid becoming entangled in the disputes.

The Brazilian government has ordered the four aircraft to leave Brazil by today. The weapons are to be returned to Libya later, by ship.

Brazil's recent offer of a package of assistance to the left-wing regime in Surinam, involving the seizure of a Cuban satellite, is regarded here as the first step in a more outward looking foreign policy towards

the Caribbean and Central America.

Earlier this month, Brazil and Mexico agreed in principle to quadruple bilateral trade, badly affected by the payments problems suffered by both countries.

A memorandum of understanding outlining the goods to be incorporated into the clearing house arrangements to be set up between the two central banks is to be signed by President Figueiredo and Mexico's President, Sr Miguel de la Madrid.

According to Brazilian officials, Mexican oil and petrochemicals are to be exchanged for soya, sugar, maize, steel products, electronic goods and machine tools.

President Figueiredo is taking with him a large delegation including the three Brazilian economics ministers and six heads of major state organisations. A party of over 90 leading businessmen is accompanying the official delegation.

Jimmy Burns in Montevideo explains why reassurances are not calming fears of Britons in Argentina

Death threats escalate before Falklands visit

"There have been some disquieting signs that Argentina may be about to enter yet another period of civil conflict in which bombs and bullets and not words and votes are used in an attempt to resolve political disputes."

The words come from an editorial published at the weekend by the Buenos Aires Herald, the local English language newspaper. On Thursday the editor of the Herald, Mr James Neilson, was threatened with death in a telephone call, if he did not leave the country in 48 hours.

The office of his newspaper would also be bombed, the caller said.

Similar threats were received during the week by other alleged "symbols" of British influence in Argentina, including myself. Along with a number of other British journalists I was forced to choose temporary refuge outside the country rather than risk "execution".

Mr David Joy, head of the British interests section of the Swiss Embassy (in the absence of formal diplomatic relations between Britain and Argentina) was also on the hit list, as well as the British companies Glaxo and Shell, and British schools.

The campaign followed the deadlock in negotiations between Britain and Argentina over the planned visit to the Falkland Islands by relatives of Argentine soldiers killed in the war and buried on the islands.

After the International Red Cross withdrew from its supervision of the visit, Britain banned the trip.

The threats to British individuals and institutions came from groups called Triple-A and the April 2 Commando, Triple-A is a right-wing terrorist organisation which was active at the time of the 1976 military coup.

In collaboration with sectors of the Argentine armed forces, the April 2 Commando surfaced for the first time last month with

Mr Cranley Omslow, Foreign Office Minister, arrived in Quito at the weekend at the start of a fence-mending tour of four South American countries during which he will seek support for Britain a year after the war over the Falkland Islands, Stephanie Gray writes.

He hopes to secure mainland air and sea links considered vital if the Falklands are to become economically viable.

The South Americans, however, see question of landing rights, for British aircraft especially, as one of the few levers they have that may ensure that Britain comes eventually to the negotiating table with Argentina over sovereignty of the islands.

Mr Omslow is visiting the capitals of Ecuador, Chile, Uruguay and Paraguay. The hope is that each of the countries might try to tone down Argentina's sovereignty claims in the Organisation of

American States and other international forums.

While each of them took a moderate—perhaps even covertly helpful—line during the war over the Falklands, it seems unlikely for the moment that they would risk the ire of their neighbours by providing a staging post unless, as shown recently by Uruguay, it could be justified on humanitarian and temporary grounds.

The logistics of ferrying the 500 bereaved relatives of British troops to the Falklands a fortnight ago would have been very much more difficult had it not been for Montevideo's assistance.

In Quito, Mr Omslow was expected to lead a sympathetic ear to Ecuador's complaints over its longstanding border dispute with Peru and to press for a more equitable balance of trade.

Last year, British exports to Ecuador—hardly touched by the South Atlantic conflict—

amounted to \$60.7m. Imports, mostly of coffee and bananas, reached only \$9.8m.

The Minister moves on to Santiago today. Chile hugged itself quietly when it saw Argentina beaten in the Falklands. It has its own territorial dispute with Buenos Aires over the Beagle Channel, the justice of which it will want to press.

Chilean officials may also be seeking supplies of parts and replacements for the large amount of British equipment employed by the armed forces and it will certainly be looking for help in grappling with its parious finances.

Chile's past and present Finance Ministers were in London earlier this year for talks with the banking community on rescheduling \$2.5bn of its \$17bn (£11.5bn) foreign debt.

While Mr Omslow will be exploring ways of improving transport and communications

with the Falklands, Foreign Office officials say the problem will not stop him lobbying for improvements in the Chilean junta's human rights record.

The balance of trade remains in Chile's favour with 1982 exports to Britain at \$111m and imports at about \$57m.

Uruguay, next on the list, remains the most likely of the four to offer Britain help.

A deal on landing rights would bring in much needed foreign exchange and could eventually be swung on the condition that only non-military equipment were shipped, and only in the context of Montevideo's full acknowledgement of Argentina's sovereignty rights.

In Paraguay, the Minister will merely be seeking the government's good offices in Britain's on-going fence-mending exercise on the South American continent.

in the South Atlantic." Argentine officials say that it is not preparing to use Sr Destefanis' expedition as an excuse for a fresh military adventure. They do confirm, however, that a decision has been taken at senior level to upgrade the importance of the Malvinas issue. In practice, this has already produced a major diplomatic offensive, as shown by Argentina's outspoken support for the Non-Aligned Movement in return for the Movement's backing at the United Nations for Buenos Aires' claims to the islands.

At the same time, the Argentine armed forces are maintaining their refusal to declare a formal cessation of hostilities, preferring instead to pursue a policy of "limited harassment" of the British garrison. Military logic has it that the more "red alerts" British troops are subjected to, and the longer the existence of "Fortress Falklands," the greater the financial strain will be on the British Treasury and the greater the potential for internal dissent.

"Sooner or later, the British taxpayer is going to ask himself whether it's worth paying all this money simply because the lady has refused to negotiate. We have time on our side and we know we will win in the end," said a senior naval official last week.

The Argentine media, meanwhile, is in the process of converting Sr Destefanis into a hero, struggling against the odds to push ahead with his journey. His expedition, however, has virtually overshadowed all other matters of domestic interest such as human rights violations, foreign debt and military corruption.

There may be more than one military officer secretly delighted that what began as a minor incident has once again turned into a crucial issue of national honour.

conveying a sense of déjà vu. The British argue that to allow an Argentine ship flying its colours to enter Falklands waters would be tantamount to recognising Argentine sovereignty over the islands. The Argentines criticise Mrs Thatcher for "overreaction" and "colonialist arrogance," and assert that the relatives have every right to go to the islands in any way they please because the "Malvinas were, are, and always will be Argentine."

Meanwhile, as Britain warned that it would use its warships to prevent Sr Destefanis's ship from entering the exclusion zone, the Argentine navy used its own kind of brinkmanship. On the day Britain officially banned the trip, a navy spokesman announced that the Argentine fleet was engaged in annual exercises "somewhere

British Gas to prepare sale of N. Sea assets

Institutions' investment overseas rises 38%

By Max Willmson

BRITISH financial institutions increased their overseas investment by 38 per cent to £26m last year, according to official figures issued yesterday.

The figures, from the Central Statistical Office, show that the institutions, including the pension funds and insurance companies, invested £23.23m in overseas companies last year, an 18 per cent increase compared with the equivalent figure for 1981.

In addition, they bought £800m overseas government securities compared with only £166m in the previous year.

The greatest surge in overseas investment was in the final quarter of the year when more than £1bn of overseas equities were purchased. This compared with an average of about £250m a quarter in the earlier part of the year.

This sharp increase in overseas purchases was surprising on the face of it, because the 12 per cent depreciation in the value of sterling will have tended to make overseas securities more expensive to UK buyers.

One possibility is that the institutions were anxious to build up their overseas portfolios in fear of a further slide in sterling. Some fund managers may also have been influenced by the market anxiety at the time about the effects of a possible Labour election victory. It was thought this could depress sterling and lead to the repositioning of exchange controls.

The figures show that the total inflow of funds into the institutions was £26m in 1982.

Finance house in talks over Rumasa stores

By Alan Friedman

Banking Correspondent

GUIDEHOUSE, a small London-based corporate finance service, has approached the Spanish Government to secure information which could lead to the acquisition of Galerías Preciados, the major Spanish department store group which was part of the expropriated Rumasa empire.

Guidehouse chairman Mr David Michaels said yesterday: "We are making inquiries about the possibility of there being a viable business to appeal to UK buyers."

Mr Michaels would not say with which UK stores groups he has been in touch.

Galerías Preciados has enjoyed an annual turnover of more than £165m.

By RAY DAFTER, ENERGY EDITOR

THE Government has told British Gas Corporation to prepare for the early sale of some of its North Sea oil assets. The sale could raise between £300m and £500m for the Treasury, according to City of London estimates.

Mr Nigel Lawson, Energy Secretary, has told Sir Denis Rooke, British Gas chairman, that the Government wants to transfer the Corporation's interests in six offshore fields to a holding company early next month.

At a later date, the assets would be transferred to the Energy Secretary and then sold to the private sector. Mr Lawson has two options: he can either offer the public shares in the holding company or sell the assets to other exploration groups. The Government has still to take a decision on the route to privatisation.

Mr Lawson wants to complete the sale this year as part of a broader scheme to restrict the Gas Corporation's interests.

British Gas, under government orders, has now created four subsidiary companies to administer its

commercial North Sea assets. These comprise: Block 9/13a containing the Beryl A and B fields; blocks 22/17 and 22/18 with the Montrose field; block 21/17 incorporating the North West Hutton and Hutton fields; and block 30/11b containing the Fulmar field.

The Corporation has a minority interest in all six fields, four of which - Beryl A, Montrose, Fulmar and North West Hutton - are now on stream. The other two fields are due to be commissioned next year.

Stockbrokers Wood, Mackenzie yesterday valued the assets at between £500m and £550m, while Hoare Govett, another City broker, estimated the assets to be worth nearer £350m - £400m.

A North Sea exploration consortium, led by British, has begun testing oil production from a small field 125 miles north east of the Shetland Islands. Known as block 21/18a Area One, the reservoir could contain between 10m and 15m barrels, according to industry analysts. The field is two miles west of the Thistle field.

Software Sciences paid about £750,000 for Altergo (Software).

Six companies were thought to be competing to buy Altergo (Software) including Telecomputing and Logica. Software Sciences, based in Farnborough, Hampshire, and employing over 500 professional staff, was bought by Thorn EMI last year from BOC.

Merchant bank drops UDS after 10 days

By Ray Maughan

CHARTERHOUSE JAPHET completed one of the shortest ever merchant banking assignments for a corporate client yesterday when after just 10 days it stepped down as financial adviser to the executive directors of UDS Group.

Deep fissures appeared in the UDS board on April 15 when the executives replaced the group's long-serving merchant bank, Hill Samuel. Charterhouse Japhet came in with the brief to present its support of the bid by Bassishaw Investments for the multiple and department stores retailer.

Two directors, Sir Robert Clark, the chairman and David Jessel, of Eagle Star, distanced themselves from the executive majority by advising UDS shareholders to take the higher offer from Hanson Trust.

After the declaration of Hanson's outright victory at the end of last week, the UDS executives were quick to change their advice to shareholders after a board meeting yesterday. Hanson's cash - or shares-and-cash - offer is now unambiguously recommended by the entire board. Charterhouse Japhet went out as Hill Samuel took up the advisory reins again.

The composition of the board changed immediately after the unanimous recommendation when following earlier consultation with Sir Robert, Hanson Trust's representatives took their places for the first time around the UDS board-room table.

BFCI removed from Bank of England's list

By Our Banking Correspondent

BANQUE Française de Crédit International (BFCI), the London consortium bank which is ceasing trading and is being taken over by its shareholders, has been removed from the Bank of England's list of recognised banks.

Credit Commercial de France (CCF) and Banque Internationale pour l'Afrique Occidentale (BIAO), the two BFCI shareholders, have each opened their doors as the newest additions to the Bank of England's list of licensed deposit takers, the second category under the Banking Act 1979.

The shareholders of the consortium bank decided last autumn that their interests would be better served by opening their own branches rather than via a continuing joint venture.

Software Sciences buys Altergo company

By JASON CRISP

SOFTWARE Sciences, a subsidiary of Thorn EMI, has bought Altergo (Software), the largest company in the Altergo group which went into receivership at the beginning of this month.

The purchase of Altergo (Software) almost completes the sale of the Altergo group, which was the leading independent British software supplier for IBM computers. Ten days ago, Data Logic, a subsidiary of the U.S. group Raytheon,

bought two of Altergo's main subsidiaries.

Software Sciences paid about £750,000 for Altergo (Software).

Six companies were thought to be competing to buy Altergo (Software) including Telecomputing and Logica. Software Sciences, based in Farnborough, Hampshire, and employing over 500 professional staff, was bought by Thorn EMI last year from BOC.

MINORCO

Minerals and Resources Corporation Limited

(Incorporated with limited liability in Bermuda)

("the Corporation")

Notice to the holders of the
9¼ per cent. Convertible Subordinated Bonds 1997
of the Corporation

denominated in U.S. dollars
("the Bonds")

convertible into Ordinary Shares of
1.40 Bermudian dollars each of the Corporation
("Ordinary Shares")

Conversion Right Expires: 18th May, 1983
Redemption Date: 26th May, 1983

NOTICE OF REDEMPTION

NOTICE IS HEREBY GIVEN to the holders of the outstanding Bonds that, in accordance with the Conditions endorsed on the Bonds ("the Conditions") and pursuant to the provisions of the trust deed dated 1st February, 1982 ("the Trust Deed") between the Corporation of the one part and The Law Debenture Corporation p.l.c. ("the Trustee") of the other part constituting the Bonds, the Corporation will on 26th May, 1983 redeem all of the Bonds then outstanding at the redemption price of 105 per cent. of their principal amount, together with interest from and including 1st February, 1983 down to but excluding 26th May, 1983 amounting to U.S. \$29.55 per Bond (that is to say an aggregate of U.S. \$1,079.55 for each U.S. \$1,000 principal amount of Bonds).

This Notice is given in accordance with Conditions 3(A), 5(B) and 12. The condition precedent to the right of the Corporation to redeem the Bonds, contained in Condition 5(B), has been satisfied since the average of the Closing Prices (as defined in the Trust Deed) per Ordinary Share on each business day on which there was such a Closing Price within the thirty day period ended on 11th April, 1983 exceeded 130 per cent. of the Conversion Price (as defined in the Trust Deed) specified below which was that in effect on each such business day.

CONVERSION ALTERNATIVE

It is provided in the Trust Deed and in the Conditions that any holder of Bonds may, as an alternative to redemption, exercise the right to convert the principal amount of his Bond(s) into Ordinary Shares but such right to convert must be exercised not later than 18th May, 1983. THE RIGHT TO CONVERT THE PRINCIPAL AMOUNT OF THE BONDS WILL THEREFORE TERMINATE ON 18th MAY, 1983.

Bonds may be converted into Ordinary Shares at the Conversion Price of U.S. \$8.16 per Ordinary Share, resulting in a conversion rate of 122.54901 Ordinary Shares for each U.S. \$1,000 principal amount of Bonds. As provided in the Conditions, any holder of Bonds who wishes to exercise his right to convert must obtain a Notice of Conversion from the specified office of any Conversion Agent (set out on the reverse of the Bonds and at the foot of this Notice), complete and sign the same in accordance with the instructions thereon and deliver it with his Bond(s), together with Coupon(s) No. 3 due 1st August, 1983 and all subsequent relative Coupons, at the specified office of any Conversion Agent at any time on or before 18th May, 1983. The Conversion Agent will require payment of an amount equal to the face value of any such Coupon not so delivered. A Bondholder delivering a Bond for conversion must pay all taxes and stamp, issue and registration duties (if any) arising on conversion in the country where the specified office of the relevant Conversion Agent is situated (other than any taxes or capital or stamp duties payable in Bermuda by the Corporation in respect of the issue of Ordinary Shares on the conversion). However, as described in more detail in the Conditions and the form of Notice of Conversion, unless the Corporation determines that an exemption from the registration requirements of the Securities Act of 1933 of the United States of America is applicable in any particular case, no Notice of Conversion shall be effective unless it includes a statement that the beneficial owner of the Bond, and of the Ordinary Shares to be issued upon conversion thereof, is not a U.S. person and such Bond is not being converted with a view to or in connection with any offer or sale of such Ordinary Shares in the United States of America or to a U.S. person.

Ordinary Shares issued upon conversion will be in registered form and will rank for all dividends and other distributions declared, paid or made by the Corporation after the date of conversion save that they will not confer the right to the interim dividend declared by the Corporation and payable to the holders of Ordinary Shares on the register on 8th April, 1983. In all other respects such Ordinary Shares will rank pari passu with the Ordinary Shares in issue on the date of conversion. No payment shall be made upon conversion for interest accrued on any Bond from and including 1st February, 1983. No fraction of an Ordinary Share will be issued on conversion but (except, as provided in the Trust Deed, in respect of cases where such cash payment would amount to less than U.S. \$5 in respect of any single holding) a cash payment in U.S. dollars will be made to any converting holder of Bonds in respect of any such fraction of an amount equal to the same fraction of the Closing Price of an Ordinary Share on the date on which such Bond(s) is/are converted. Subject as provided in the Conditions, certificates for the Ordinary Shares issued upon conversion will be despatched within 28 days after the date of conversion of the relative Bond(s). The Corporation will use all reasonable endeavours to obtain a listing for the Ordinary Shares allotted on conversion on The Stock Exchange in London and on all other stock exchanges on which its Ordinary Shares are then listed.

Between 13th March, 1983 and 11th April, 1983, the means of the daily nominal quotations of an Ordinary Share as shown in The Stock Exchange Daily Official List (converted from pounds sterling to U.S. dollars at the daily rates of exchange also shown therein), ranged from U.S. \$11.75 to U.S. \$10.76

NEVER HAS A CARD OFFERED SO MUCH TO SO FEW

The charge card with no pre-set spending limit.

Recognised at over 3½ million outlets worldwide.

Over 180,000 places where you can use it in the UK.

An automatic unsecured overdraft of at least £7,500.

A preferential overdraft interest rate.

The only card with a free tax and financial planning consultation.

Recognised at more banks worldwide than any other Gold Card.

Welcomed at over 4,700 Barclays Group branches worldwide.

The card that's also at home in over 120,000 Visa banks.

Free emergency office facilities in over 60 countries.

Emergency telephone, telex, copier and postal services.

A 24 hour telephone service to pass messages to your Barclays branch.

Free economic reports on countries you visit.

Special travellers cheque service for Barclays personal customers.

£1,000 worth of travellers cheques at 1 hour's notice at Heathrow.

The only Gold Card that is also a UK cheque guarantee card.

The card with more cash facilities than any other Gold Card.

£100 a day from over 500 round-the-clock cash dispensers.

£250 a day with a Barclays cheque at most Barclays branches worldwide.

£250 a day on your card at Visa banks throughout the world.

Free £150,000 travel accident insurance when you travel on the card.

Your family covered too, if their tickets are bought with your card.

The card that lets you choose the billing date.

A free safe custody facility for your valuables.

You can choose to settle your bill automatically by direct debit.

Up to \$5,000 available in most countries if you lose the card abroad.

You don't have to move your bank account to get one.

Ask your local Barclays branch for full details, or post to Barclays Premier Card, Northampton NN1 1TX.

THE MANAGEMENT PAGE: Small Business

EDITED BY CHRISTOPHER LORENZ

Expansion—but within limits

John Griffiths explains why a specialist car maker decided to turn away business

GIVEN that the motor industry's biggest current headache is over-capacity, with too many cars chasing too few buyers, the problem of a small, Blackpool-based sports car maker is an unusual one.

A sizeable proportion of TVR's 100 employees were at the company's factory until mid-night on Good Friday. They were at work until nearly midnight on Easter Saturday. And they were in again on Easter Monday.

"We've sold the cars already; now we've got to work out how the hell to make them," says TVR's managing director, Stewart Halstead.

Though TVR is unusual in its industry, it is at the same time facing a dilemma that is classical for any small company. Faced with the potential rapidly to expand its business—should it gear up and meet the challenge or take a more cautious approach even at the expense of losing business?

TVR is taking the second course for the simple but sound reason of historical precedent: in the early 1970s TVR had been selling all but one car a week in the U.S. "Then the U.S. market slumped, in the wake of the oil crisis, so attention was transferred back to the UK," says Halstead. "But the market had been neglected and the company went through a very bad time while people were getting to remember it again."

He is therefore adamant that TVR will not plough a lot of resources into expanding production. It has turned down business from a Taiwan importer which sought to place 75 orders for 80 of its Taimin model cars during the current year.

Nevertheless, TVR still has a punishing production schedule. It has got to build 130 cars for the U.S. by July, and 100 each for Singapore and the Middle East for delivery this year. It expects market demand of at least 200 in the UK and more on the Continent. And this with a production ceiling that, hitherto, has been 400 units a year.

Yet at the beginning of last year, TVR was going through one of its worst patches for 16 years. At the time, new fees were getting under the chairman's and managing director's

desks: those of Peter Wheeler, a 39-year-old chemical engineer who made a fortune in the North Sea oil supplies business, and Halstead himself. Wheeler had bought the company from Martin Lilley who, with his father, Arthur, had originally bought the bankrupt remains of the first TVR concern in 1967, and then handed over 49 per cent of the equity to Halstead. "He figured it was more of an incentive than any salary he could offer," recalls Halstead, who was then sales director.

At that time TVR had spent over £500,000 developing a new model—the Taimin—on which it is now wholly dependent. While such a sum is peanuts to volume car manufacturers it was a great deal for a company which this year will turn over between £2.5m and £3m.

One problem it had been facing was exclusion from the lucrative U.S. market because it did not meet American engine emission and safety legislation. In 1980 TVR sold 144 cars, and slightly more in 1981—below the production break-even level of about four cars a week.

The new ownership, and of crucial importance new capital, have helped transform the company. It has been able to spend money on development to ensure the car can be sold in the U.S.—hence the order for 130 cars.

The Middle East order came after Wheeler—who is still involved in the oil business—had met two Saudis in Riyadh who showed interest in importing the cars after seeing them at last year's UK motor show. Originally the Saudis sought 400 units, the entire annual production, but this had to be scaled down to 100.

Then came the Singapore order for 100 from Autobase Trading, which was being set up by two Singaporean women to import British sports cars. Autobase also imports the Kia-built by the South Korean-owned Panther Cars, of Surrey.

This demand leaves precious few cars from TVR's capacity for the UK and Continental markets—indeed, no cars will be built for the UK market for the next three months. This worries Halstead given 200 were sold in

Peter Wheeler (left) and Stewart Halstead, chairman and managing director of the Blackpool-based TVR sports car company. It is working to a "punishing production schedule" to meet demand.

the UK last year, despite the depressed market.

Of course, by conventional criteria of the motor industry, TVR should not be building cars at all. It has little economy of scale; it buys in its Ford engines and gearboxes and other proprietary parts such as instruments. Its tubular space frame chassis hand-welded, is its own, however, as is its glass-fibre body and most of its suspension and other assemblies.

At the same time the car is not cheap; the lowest priced 2-litre two-seater convertible is just under £10,000 and its 2.8-litre car is about £14,000. This has about the same performance as Ford's 2.8 litre Capri coupe and handles in similar fashion. Yet the Capri costs nearly £6,000 less.

The TVR is also about the same price as the mid-range Porsche 944, which has a new sophisticated engine and sophisticated electronics. TVR admits it has to ride on the backs of other people's technology.

So why does it sell? The answer, which TVR is well aware of and which is no doubt an additional factor behind its decision not to gear up massively for increased production, is its exclusivity.

As Halstead puts it: "Someone can spend £8,000 on a 2.8 Capri, and it goes well and everything else. But it still doesn't look much different from an ordinary one parked in Joe Soap's driveway."

The exclusivity works, though, only if the car has reasonable integrity of build. Halstead claims it has. "With previous models we were building cars for enthusiasts, but now we are building serious cars which owners want to use and which won't let them down." The mainstay is "good basic engineering and keeping the quality up."

Such expansion as Halstead is prepared to undertake involves perhaps another 20 added to the workforce. The additions are likely, though, to be linked with other activities being developed. This includes the possibility of selling its glass-fibre body production experience and building space-frame tubular chassis for another manufacturer. Long term, says Halstead, the special projects side of the business will grow. "But we're not going to push it. We are not going to lose sight of the fact that the mainstay of the business is building cars."

Technology markets

Licensing has been under-exploited

BY ARNOLD KRANSDORFF

THE UK's 36 industrial research associations, established after the First World War at government behest, to help companies pool their research resources, have been criticised for their lack of success in the field of technology licensing.

The attack comes from two academics who are studying the use of licensing by small and medium-sized companies in the UK. Julian Lowe and Nick Crawford of Bath University's School of Management have found that technology licensing has a key role to play in innovation—itsself frequently a crucial facet of small company growth. Licensing works both ways, as a means of introducing new products or processes to a company, and of helping that company sell its knowledge.

Lowe and Crawford have concluded from their research into 15 of the most important research associations that their role in technology licensing "has not been to substantial."

"On average the research associations in our sample were involved in two technology licensing deals each year and few felt it part of their remit to be involved in venture research to produce marketable industrial property."

The majority of research associations, which used to be assisted by a large Government subsidy, were "privatised" in 1970, since when they have been funded by industry itself, mainly the larger companies. Only a few are still subsidised by the Government.

Instead of venture research, say the researchers, "they found it better to involve themselves reactively in co-operative research projects when they acted both as co-ordinators and sub-contractors for specific research tasks."

"It seems that even with their substantial background of research in particular areas the problems involved in setting specifications, taking risks and then selling licensable research

results were sometimes prohibitive. Possibly the background and history of the research associations along with their lack of a clear profit motive, is responsible for this relative inactivity in technology markets."

Lowe and Crawford, who made their criticism last Friday at a seminar in Bath on local business development through innovation and technology licensing, disclosed that there had been a fourfold increase in licensing royalties received between 1969 and 1979 and a similar growth in licensing payments over this period. Currently the UK has a surplus on its "technology royalty" account of almost £150m.

They say that while licensing appears to be dominated by the large companies, it can present very real benefits for the smaller company as well.

It presents a means of expansion which would otherwise be unavailable, they say. "Recent studies of small

firms have suggested that the rapid growth frequently have cash flow and liquidity problems. Certainly, licensing out allows a firm in this position to capitalise on its industrial property by selling this to a licensee who effectively speeds up the flow of cash stemming from the exploitation of the market. Similarly, with licensing in, new products and processes can be adopted quickly without necessitating "original research programmes".

But their own researches show a very high level of ignorance by small companies, patent agents and lawyers over the best way to negotiate licensing deals.

"Questions of how to price a licence, and for what period, and to whom, are clearly difficult questions for which there are no set or easy answers. Licence negotiations can take a considerable amount of management time and in a small company this could be a very scarce resource—with a high opportunity cost."

In brief...

MANY seminars are being held up and down the country in conjunction with the Yorkshire TV series "Re Your Own Boss", currently being repeated nationally on Channel 4. An evening session, for example, is being staged on April 27 by the Tower Hamlets Centre for Small Business, one of the longest established enterprise agencies. More details from 99 Leman Street, London E1 8EY. Tel: 01-481 6512.

A NEW Register of Small Business Education and Research Activities has just been compiled by Peter Wilson of the London Business School. Consisting mainly of details of those who have attended the 1977-82 National Small Business Management Teachers' Programmes, it lists 163 individual teachers from 76 educational institutions (polytechnics and colleges of further and higher education comprise the majority). For the first time the register includes coverage of current and proposed research in small business. Available from London Business School, Institute of

Small Business Management, Smurthwaite, Regent's Park, London NW1 4SA.

A MAJOR proportion of properties being let by English Industrial Estates in County Durham have been taken up by small businesses, according to the latest figures issued by EIE. Compared with 1981-82 the rate of occupation of factories and workshops more than doubled from 88 sq metres a month to 1,824 sq metres.

Geoffrey Robinson, EIE's chairman, says: "Of the 72 units let in the last 12 months, 65 per cent have been of 2,500 sq ft or less." The EIE plans to invest a further £5m in County Durham over the next 12 months.

THE 1983 Industrial Achievement Award was launched last week with a top prize of £15,000 for the winner and £1,000 available for each of the 10 finalists.

The Award, sponsored by Lloyds Bowmaker Finance Group, in co-operation with the magazine Accountancy Age, seeks to acknowledge and reward the achievements of small businesses in terms of new ideas, products or markets.

Apart from encouraging more entrepreneurs to come forward, last year's winner—a major supplier of specialised VDU colour displays in the UK—recounts the recognition which goes with the Award "has made a valuable contribution to the company's continuing success and growth."

Any UK-owned business with an annual turnover of between £50,000 and £10m, and any business person, is eligible. Write to Gordon Walter, Lloyds Bowmaker Finance Group, Christchurch Road, Bournemouth BH1 2LG. (Tel 0202-23077) before June 30.

WITH 100 enterprise agencies now officially opened—and a further 50 in the pipeline—a warning has been delivered by Dr Allan Gibb of Durham University Business School (DUBS) that they "may add little to the existing support system." They may represent he adds "merely another element of duplication."

The problem, he believes, lies "largely in the speed with which they are being set up." Because of this and because of the untapped local potential and the under-development of local assistance to date Gibb is urgently calling

for wider discussion of the issues involved. His recent paper—"Enterprise Agencies—Exploring their Future Potential"—is drawn from involvement with 30 Enterprise Agency Directors who have attended courses at Durham and from the DUBS Small Business Centre's experience over the years with Enterprise North, a volunteer counselling and promotion service.

WITH all employers now obliged to implement the new rules on Statutory Sick Pay (SSP), which came into effect on April 6, early indications suggest that many companies are still confused. An article on this page on March 29 provided a guide to the requirements and mentioned a list of booklets designed to help. A more comprehensive—and more expensive—study has been written by Greville Janner, QC, MP, which brings together all the details about sickness at work, now and old. "Janner's Guide to the Law on Sick Pay and Absenteeism" costs £20 or £21.45p (inc p and p). Available direct from Business Books, Hutchinson House, 17-21, Conway Street, London W1P 6JD.

Tim Dickson

Jennifer: "What was our sales budget for the calendar fiscal?"
 Apple: "12,364 units."
 Jennifer: "And ex-factory sales?"
 Apple: "14,960 up to the Audit. That's already 21% over target."
 Jennifer: "Hmmm. Not bad. What percentage of volume was the premium model?"

Apple: "51%. 27% over target."
 Jennifer: "That extra profit means we can invest in new equipment to increase productivity next year."
 Apple: "You mean I can have that new printer I've had my eye on?"
 Jennifer: "Let's talk about it."

Is this how your stomach feels when you start a new leasing transaction?

When you arrange a new leasing transaction it can be a nerve-racking experience; after all, it's not something most people do every day.

Unfortunately, it's not something most banks do every day, either.

So you're every right to be nervous. Unless you come to Bank of America.

Being a leader in this field, we have recently been responsible for arranging £160,000,000 worth of assets for British industry. The transactions ranged from leasing commercial

vehicles to semi-submersible drilling rigs, and our roles ranged from lease advisor on large and small transactions to placement agent.

A volume and range of transactions as wide as this means that we have day-to-day contact with the market; and that, unlike some other organisations, we can provide you with all the facilities you require ourselves.

It also means that we really do know what's going on; we know just what lessor will suit a new lessee, just

how to judge the rental profile, terms and conditions inherent in a leasing package, and exactly how to make the most efficient use of the current tax and legal environment.

If you're considering leasing, call 01-236 2010 and ask for the Leasing Services Group. It'll be a lot simpler in the long run.

Look to the Leader.

Plant and Machinery

Business failures and rationalisation programmes have wrecked home markets and undermined exports. Price competition is savage and order books weak. The prospects for recovery are uncertain

Recession biting deep

BY IAN RODGER

PLANT AND MACHINERY businesses have been among the worst hit in the current long and devastating recession. Manufacturers of equipment have seen their home markets dry up and their export margins destroyed by the strength of sterling.

Dealers in new and used equipment have been ravaged by vicious price competition and soft markets. But this very broad sector also contains a few of the recession's big winners, including the auctioneers, hauliers and brokers of plant and machinery. The trick, it seems, has been to avoid being involved in equipment as a principal.

The auctioneers, hauliers and brokers thrive on the failures of other businesses, whether it is a bankruptcy or just a rationalisation within an industry or company. And they have certainly had plenty to chew on in the past three years.

Business failures have been reaching new records in Britain throughout the recession. The latest figures, for the first quarter of 1983, show a 28 per cent increase on the same period of 1982. Failures were running at 88 per week, compared to 70 in 1982 and only 25 in 1979.

The engineering and metal industries, where much plant and machinery is located, suffered a 67 per cent increase in failures in the first quarter, to 251.

The main supply of machi-

nery, however, has come from continuing businesses that have had to rationalise. The dramatic contraction of the leading motor, textile and engineering companies in the past three years has flooded the market.

Henry Butcher and Co, the leading machinery auctioneers, claim that they have raised £40m in auctions in the past two years compared with £28m in the previous two years and only £5m in 1978-79.

Buyers

The problem with this rush of used goods is that the possibility of finding buyers for it tends to decline. Receivers and liquidators are said to be deciding more often these days to smash equipment rather than risk putting it up for option.

"It's pretty sad when the business is only one way," Mr H. D. F. Creighton, chief executive of Farmer Steadall, a newly-established machine tool dealer, says. "But it's becoming two-way again. At nearly all auctions you are seeing some of the redundant staff starting up in a small way."

Opinions vary on whether the desperate rate of contraction in British industry will remain high, but the odds are that it will level off now that a recovery seems to be getting under way.

Pickfords the removals group, say they have noticed a significant decline in their plant and moving business in the past few

months, indicating that the rationalisation process, both within industries and companies, is slowing down. Another factor is that overseas markets for UK plant and machinery have softened as recession has spread throughout the world.

Another removal specialist anticipates that business would pick up in the summer when companies shut their factories for holidays.

There is still little sign of the end of the recession in new equipment markets. Makers of machine tools, most construction equipment and industrial machinery are still reporting weak order books, although the weakening of sterling in recent months is taking some of the extreme pressure off prices.

One key to recovery for the manufacturers of many of these products will be the renewal of plant hire fleets. The plant hire industry has been very depressed in the past few years, and operators have been struggling to reduce their fleets in line with lower demand.

Rates are still uneconomic, however, and the feeling in the sector is that there is still substantial over-capacity. Although there has been a slight improvement in trading conditions in the past year, few if any of the operators have the means or the will to start renewing their fleets.

The markets for used machinery vary considerably. Markets for very large plant,

such as steelworks, are very weak. For example, when Dupont closed its three-year-old Llanelli electric steelmaking shop in 1981, it tried for a year to find a buyer, but ultimately turned it over to the British Steel Corporation's overseas sales division.

Volatile

BSC had enough trouble trying to sell its own idle plant, which now includes all the equipment at Round Oak Steel, closed last year, and the Ravenscraig slab rolling mill, which is being closed this month.

Markets for used machine tools have been extremely volatile in the past few years. Normally, dealers in standard machines thrive on sales to the U.S., especially of U.S. made or designed machines, but that market has fallen off consider-

ably in the past year. South Africa has been another important market, but it too has weakened.

One dealer reported that his turnover in the past three years was 30 per cent lower than it was in the three previous years. Prices on standard machines have collapsed to about one quarter of the levels prevailing three years ago, and with the rate of engineering bankruptcies remaining high, the prospects for recovery are not good.

The market for specialised machine tools remains active, although the risks for dealers can be much larger because of the higher costs involved. One prominent area is that of large presses. Because of the contraction in the motor industry, a lot of presses have come on the market in the past few years, notably from

and small construction projects. Demand for dump trucks and other large equipment remains weak.

Suppliers of used fork lift trucks report that demand has been recovering in the past month or so, partly because the decline in the value of sterling has made exporting profitable again and partly because many UK users are looking at second-hand machines as an economy measure. One supplier said this was especially true of users that only need trucks for a few hours' work per week.

However, the race to improve in market conditions should be seen against the background of extremely depressed conditions in the past three years. New truck prices are down about 15 per cent in real terms, and the secondhand market has suffered accordingly.

Trade in

The result is that prices on post-1976 used models are no better than on pre-1976 models, and dealers are suffering. A further problem is that there is no growth in the home market, except in the size of tractor being used. Often these days, a farmer trades in two small tractors for one large new one.

Markets for used construction equipment are recovering strongly, especially for excavators and bulldozers, reflecting the upturn in housebuilding

THE RECESSIONARY knives which have lifted the scalp of many leading British machine tool companies show no sign of being blunted. Alfred Herbert, which symbolised the UK sector for many overseas clients, has just gone into receivership a year after the core lathe-making operation was acquired from the liquidators of the original group.

Kearns-Richards, one of the few surviving indigenous heavy boring and milling machine tool manufacturers was put on to an assembly-only basis by its parent, Staveley Industries, last October.

Turnover in the British machine tool industry last year was less than half its 1975 levels and the workforce has had to follow. This savage downturn has many causes but one or two factors stand out.

The decline of the industry's principal customer, the mechanical engineering sector, has clearly played a leading role and an assessment of the outlook for machine tool manufacturers must start with the prospects for the leading metal forming companies. It may be true, as the pundits hope, that domestic industry is starting to revive but manufacturing industry was looking for an upturn which never came early last summer and in the summer before that.

Plant managers will wait to be certain that economic recovery is properly under way before committing themselves to substantial shop-floor investment.

The machine tool sector's problems have been aggravated, as in so much of the rest of British industry, by ruthlessly efficient import competition, a sponge-like exchange rate capable of absorbing almost any level of overseas competition, and an historically high unit production cost relative not only to the leading U.S. and European manufacturers but, more significantly, by the emerging industrialised countries.

It is useless now for British manufacturers to complain that imports have been subsidised, that machinery arriving through the ports can only have been sold below production cost, the bleak fact is that the machine tool industry has almost entirely surrendered to the conventional machine tool market.

Added value

Over the last few years, manufacturers have been forced to adopt the higher technology markets for numerically controlled (NC), or computer numerically controlled (CNC) machines in the belief that the element of added value would be beyond the low-cost producers of southern Europe.

The irony was that the competition from North America, West Germany and, not least, from Japan was very technically advanced.

Not only was the competition technically advanced but it was also established on British shop floors and established on price.

The hardest nut that UK manufacturers face is the effort to build big order books, long production runs

and the volume economies which characterise many of Japan's leading machine tool companies. By the turn of 1982, for example, Alfred Herbert was estimated to be making some 230 lathes each year; the competition in many cases was producing well over ten times that number.

One of the first markets tapped in the attempt to build volume was the U.S. and particularly its energy exploration sector. That effort seemed to be progressing very well indeed until cross-currency rates intervened dramatically, and towards the end of 1981, the American energy industry suddenly switched off.

Few companies operating in that area escaped the crippling effects of a sudden dearth of drilling rigs in the U.S., either at the front end or further back down the production chain to the machine tool makers.

The hope now must be that the British industry can cope more effectively with sterling parties which, if still highly volatile, do offer a substantially better chance of quoting profitably and effectively in overseas markets. Domestic manufacturers claim that their products now compete properly on range and technology but, both abroad and home, the battle to sell on price is still being bitterly waged.

Nothing in the recent history of trade international haggling suggests that the importers will gracefully surrender their shares of the UK market over the negotiating table.

Construction gear in disarray

The cutback in demand for construction equipment is forcing very tough competition on prices

THE WORLD'S construction equipment market is in disarray. Two of the biggest equipment manufacturers are deep in loss and every company in the business is suffering from steep price competition caused by an international cut-back in demand.

One of the principal ingredients of this decline is the fall in oil revenues hitherto enjoyed by Opec members, which have been among the biggest customers for building and civil engineering contracts.

The fall is best illustrated by Caterpillar, one of the giants of the industry. After over 50 years of continuous profitability, the group recorded a loss of \$180m in 1982 and has started the current year with a deficit of \$172m after tax in the first quarter.

Sharply-increased debt servicing costs take a large proportion of the blame as does the seven-month strike in its U.S. plants but Caterpillar essentially is blaming the worldwide economic depression and the effect on margins outside the U.S. of severe overseas competition.

The main beneficiary of currency swings over the past few years has been Japanese industry so it comes as something of a surprise that Komatsu has suffered a recent slip in earnings.

Komatsu's turnover in 1982 rose 15 per cent to \$3.36bn against Caterpillar's very depressed sales of \$900m—but net income dropped fractionally to \$138m. It is worth noting that

Komatsu's own sales in Japan dropped 5 per cent as a result of government spending cuts and a decline in house building but, with the exception of the American continent, the company claimed to be making progress in every other international area of operations.

On a smaller scale, the British-based Acrow has been forced to reschedule its bank borrowings following substantial redundancies and plant closures. Known best perhaps for its Coles Cranes and Priestmans Mustang range of hydraulic excavators, Acrow

has run into a series of deepening losses.

Outwardly, IBH Holding of West Germany, the world's third largest construction equipment manufacturer, is more sanguine about current year prospects. After an estimated DM 50m deficit for 1982, the group expects to break even this time or perhaps do better.

IBH has cited the upturn in building and civil engineering in West Germany as the grounds for its confidence and estimates that the rate of redundancy, which cut a fifth off the payroll last year to 10,000,

will be lower with about 600 lay-offs in 1983.

The creation of IBH is due in a real sense to the recognition by many of the leading world manufacturers over the last eight years or so that the industry could never be properly profitable unless it tightened up on a major scale. Many large equipment groups have been sold to IBH by their parent companies on the assumption that a cohesive West German management would bring the benefits of a wide spread sales network and integrated product development hitherto denied to individual subsidiaries.

The current year should see the benefits of much recent reorganisation inside IBH's expanded empire and, indeed, within the entire industry. Yet like so many other sectors, construction equipment is now anxiously awaiting an upturn in activity.

It is unlikely to come from West Africa or the Gulf, two formerly buoyant markets. And the outlook in the industrialised West is patchy, to say the least. In the UK, a pattern of some repair and maintenance, sporadic bursts of public authority spending and a more encouraging private housebuilding sector seems to have been set. But the prospect of a sustained rise in total new work output still seems hazy. The industry may be forced to tread water, if it can, for a good while yet.

And at Manchester

Anything, anywhere, any purpose.

Whether for example, it is valuing oil installations in the Thames Estuary for acquisition purposes, a distillery in South America for U.K. tax purposes, the contents of a stadium in Nigeria for insurance purposes, or 'high-tech' equipment in the United States and Canada for financial purposes, it is essential that the valuers you appoint can react quickly, work on an understood basis wherever the assets are located and can be relied upon for their expertise in your particular industry.

Fuller Peiser in the United Kingdom* allied to Cooper Appraisals in Canada and Marshall & Stevens in the United States, work together to provide a totally comprehensive valuation and appraisal service wherever you need and for whatever purpose you need it. Further information about this worldwide professional service is available from Fuller Peiser's head office, telephone No. 01-353 6851 or from any of the Association's twenty five offices in the UK, Canada, and the United States.

A SELECTION OF FORTHCOMING AUCTION SALES

DATE	LOCATION	NAME OF FIRM	TYPE OF SALE
Wednesday 27th April	Birmingham	A J Gupwell Ltd	Modern Woodworking Plant
Wednesday 11th May	Round Oak	Round Oak Steel Works Ltd	Office Furniture & Equipment
Thursday 12th May	Erith	Kent-Vactor Engineering Ltd	Heavy Engineering Plant, 100 Machine Tools
Wed/Thurs 18th & 19th May	Belfast	DeLorean Car Plant	DeLorean Cars, Machine Tools, Excellent Laboratories, Test Facilities, Furniture & Effects in over 3,000 Lots mainly post 1980.
Wednesday 25th May	Milton Keynes	Advanced Developments Engineering Ltd	Excellent EDM and ECM Machines
Thursday 26th May	Bristol	Langston Machine Co Ltd	Heavy Machine Shops and Toolroom Equipment
Wed/Thurs 8th & 9th June	Round Oak	Round Oak Steel Works Ltd	Steelworks, Ancillary Plant, Machine Tools & Equipment
To be arranged	Weston-super-Mare	Alecin Design Products Ltd	Modern Double Glazing Plant & Equipment

Regular Monthly Auction Sales of Liquidation Stock and Miscellaneous effects at our Saleroom Premises in London NW1.

PRIVATE TREATY SALES

1. Unused Plant Machinery for the manufacture of Nuts & Bolts, Tin Cans, Spot Casting & Lacquering, Diesel Generators, Waxed Paper Drinking Straws, Paper Plate & Cup Plant, Cost in excess of \$10 million, mostly export crated, lying Cyprus.
2. 110 Items of "Caterpillar" Equipment, including D9's (1982), D8's (1977-82) Scrapers, Graders, Generators, etc. Cost Naira 15-20 million. Available as individual items, lying Nigeria.
3. Complete Iron Foundry for Grade 14 and 17 castings melting 2 x 28.5 tonnes induction furnaces (1980) and other excellent equipment available as a whole or in parts. Lying Midlands.
4. Ferrous and Non-ferrous Rolling Mill Equipment, Arc Furnaces, Continuous Casting Machines, Sendzimir Mills C-M Billet Grinders and off line equipment. Lying Europe.
5. Petro chemical Plants, 3mw-10mw Gas Turbines, Packaged Boilers to 150,000 lbs/hour, etc. lying UK & Europe.
6. Two "Mitchell Webster" Hydrostatic Sterilisers recently rebuilt at cost of £250,000 lying North of England.
7. Berthiez 6 metre openside Vertical Boring Mill (lying UK).

TENDERS

Regular sales by Tender of Clothing, Fancy Goods, Office Furniture, Motor Vehicles, Shop Fixtures & Fittings, Jewellery, Specialist Manufacturing Plants, etc.

Sales for Receivers, Liquidators, Official Receivers and private individuals.

BUSINESSES FOR SALE

Brickworks, 12 million p.a. output - freehold - good clay reserves - South East.

Precision Engineers - freehold property - Southern England.

Wretworkers - freehold property - Southern England.

Sawmill - freehold - just commissioned - Southern England.

Shopfitters - long leasehold - London.

PLANT AND MACHINERY IV

Transport and installation companies chasing a stream of contracts

More plant moved

COMPANIES involved in the removal, transport and installation of industrial machinery, particularly in the secondhand equipment sector, have seen recession cause considerable fluctuations in the pattern of their business over the last few years.

While the volume of movements covering the transport and installation of new plant and equipment not surprisingly has remained subdued in the face of widespread cutbacks in manufacturing industry, the level of activity involving used or secondhand machinery has varied considerably.

When recession first began to bite about four years ago, the secondhand plant and machinery market experienced something of a boom. Many UK manufacturing companies either went to the wall or were forced to sell off much of their equipment, a lot of it to buyers from overseas countries who saw the chance to develop their own industries using bargain-price plant.

Survived

"A few years ago we found there was a steady stream of used industrial machinery going overseas to Third World and developing countries which took advantage of the situation," says John Robinson, marketing manager for Pickfords, one of the specialists in industrial removals.

"Over the last couple of years though, it is fair to say that this boom has passed. The UK companies which survived the impact of recession have now generally rationalised their production activities and are not having to sell off so much equipment while the potential buyers from overseas have themselves been hit by recession and cannot afford to buy so much."

A second effect of recession as far as transport and removals companies were concerned was an increase in the volume of used machinery being moved between various UK manufacturing plants of the same company or group.

In the early 1970s, a number of manufacturing companies established new production centres in areas such as South Wales and Scotland to take advantage of the financial incentives offered to them. As recession hit harder, so some of these

companies closed satellite production centres and concentrated their operations on fewer locations.

Such developments often involved moving the best plant and machinery from factories which were being closed down to be relocated at a centre where production was being continued.

In some instances, relocation work involved the movement not just of plant and machinery but also of office equipment, records and even personnel.

Mr Robinson says: "This sort of relocation work has increased over the past few years. With these projects an awful lot of planning is needed—probably more than 50 per cent of our work in such moves is in the planning stage."

An example of the scale of some such projects is provided by Roygrove, Nottingham, a company which offers a mechanical and electrical plant erection and installation service throughout the UK.

Last year, Roygrove was involved in a six-month operation to move a rubber moulding plant from just outside London to the East Midlands area, a contract worth nearly £300,000. Roygrove says: "The move involved the transport of a large number of moulding presses, calendaring machines, roll mills, test presses, and so on. The largest single machine weighed about 85 tonnes."

Such an operation, which involved the dismantling, removal and re-installation of the plant, was larger than most of the field although Roygrove has done similar jobs on a smaller scale.

Competition for the work of removing and transporting industrial machinery and plant comes from a variety of different sources. Leading specialists in the industrial plant removals field, apart from Pickfords and Roygrove, include Vanguard and Beck & Pollitzer. In addition, leading freight forwarders such as the Lep Group are also involved, as are some of the heavy haulage companies like Sunter.

In some cases, the contract for removing and transporting machinery is directly between the manufacturing company and

the remover; in others, particularly where an international move is being made, freight forwarders become involved.

Removers and installation specialists tend to claim they have the expertise in actually handling the equipment, whereas the forwarders emphasise their skill in dealing with all aspects of transport. Sometimes, for instance, forwarders are approached even before a purchase is made as prospective buyers seek to establish the total cost of securing equipment and getting it into operation on site.

"For example, a buyer interested in acquiring some secondhand equipment, say at an auction, might ask us for a quote to cover the transport of that equipment or home to his premises elsewhere in the UK or overseas," according to the Lep Group in Scotland where the movement of industrial plant and equipment, particularly in the secondhand sector, has been a substantial activity in recent years.

If the prospective buyer gets a quote for transport of, say £5,000, and he has set himself a limit of £10,000 for the acquisition and installation of the machinery then he knows he can afford to bid up to £5,000 at the auction or sale."

An interesting but rather sad reflection of the way Scottish industry has been hit by recession is the fact that over the first quarter of this year the Lep operation, based at East Kilbride, Glasgow, handled about 30 jobs involving the movement of secondhand equipment and just six involving new installations.

General observation among those involved in the transport of new plant is that the market as a whole is still depressed. As far as the movement of secondhand machinery is concerned, most removers and transport companies agree that while the nature of the market has changed over the last few years as recession had various effects, the actual volume of traffic moving probably has remained about the same.

In a lot of cases, where factories were forced to close by recession, their equipment was old and obsolete. Since it was

of little or no interest to prospective buyers, such plant was often broken up on site and taken away as scrap rather than transported to a new location by a specialist company.

"I think there will be a certain amount of the more modern and specialised secondhand equipment which will continue to arouse interest from prospective purchasers but a lot of the general plant will probably end up as scrap," said Mr Robinson of Pickfords.

In the secondhand market, he added, removers or transport companies tended to work for the purchasers of machinery, whereas in the new equipment sector they could work either for the purchaser or the supplier.

Phillip Hastings

The ill-fated De Lorean plant at Dunmurry when production was at its height. New equipment used to build the gull-wing sports cars is to come under the auctioneer's hammer for the second time.

Auctioneers follow the receivers

WHEN THE Receivers went into De Lorean's car assembly plant in Belfast they found equipment which still carried an auctioneer's label from a closing down sale which had been held only three months previously at the Talbot car plant in Linwood, Scotland.

"Next month the same machinery will come under the auctioneer's hammer for a second time when plant and equipment at De Lorean's Dunmurry factory in Belfast is put on sale."

Henry Butcher, which will handle next month's sale, also organised the Talbot auction. The firm says: "We were amazed to find our labels on machinery at Dunmurry. There was hardly time for the company to install the equipment before it was in the hands of the Receiver."

Butcher, chartered surveyors, estate agents, valuers and one of the largest UK auctioneers of second hand plant and machinery, estimates that during the past two years it has averaged about two auctions a week taking in the process approaching £40m from used equipment sales.

The wave of company failures and factory closures which has

swept over British industry during the past few years has flooded the market with secondhand equipment as industrial investment has slumped and buyers have become more selective about what they buy and at what price.

"The overall result is that, in many areas of manufacturing industry, there is now a significant over-supply of used plant chasing a contracting number of buyers," says Christopher Derry, partner at Henry Butcher. Prices have slumped, he says, and some machine tool dealers have been badly squeezed as a result.

"Nowhere is this more clearly illustrated than in the engineering sector. The sheer volume of used machinery advertised in trade journals is quite staggering when compared with the situation only a few years ago. To underline the point, the names of several machine dealers now bear the suffix 'In Receivership,'" says Mr Derry.

"The market has been undermined further by a reduction in international demand. In the early months of the recession sales of machine tools and equipment no longer required by contracting British industries, had been boosted by

overseas buyers seeking to expand their companies on the back of cut price bargains from the UK.

"It was not always clear exactly where the final destination of this equipment was to be, since the actual bidding was often undertaken by an agent," Mr Derry says.

"However, machinery certainly found its way into countries as diverse as Mexico, Indonesia, India, Israel, Nigeria and South Africa. Other countries included Sweden, the United States and Japan."

Big buyer

For example, Saab Scania was one of the big buyers 18 months ago at the Talbot, Linwood sale—the largest auction of used industrial plant and machinery ever held in the UK. Saab paid £150,000 for a single-action 1,000 tonne press which the Swedish company said would have cost between £350,000 and £400,000 to buy new.

"Over the last year or so, demand from overseas purchasers has noticeably slackened as world recession has bitten deeper, although there is still a fairly constant demand from the U.S. for used

American-built machine tools," Mr Derry says.

Graham Knowles, joint managing director of Hubbert Group, machine tool dealers and traders, says that prices of some used machines are about a quarter of what they were four years ago.

"Purchasers are using their strong bargaining position to demand extended credit terms, guarantees and re-engineering of some equipment to meet new safety requirements," says Mr Knowles.

Hubbert says that in one instance it has been holding stock, originally destined for the U.S. market, for about three years.

Edward Roughton Son and Kenyon estimates its used equipment auctioneers business had a 44 per cent increase in instructions during 1982. "It is without doubt one of the best times in recent history to purchase secondhand plant and machinery," says the firm, which believes there will be a continuing stream of company failures in 1983.

"There are a number of companies still poised on a knife's edge," says Edward Roughton. "Companies which have run down stocks or are under-

capitalised might find it very difficult to respond to increased demands as the recession ends. A number of companies are still being kept afloat, largely through the goodwill of their bankers."

Roughton, however, says that reasonable prices can still be achieved for top quality equipment where there is strong demand from new companies just starting or from existing businesses seeking to expand or become more efficient. "Quality tends to maintain its value even in a depressed market," says the company.

Obsolete

Christopher Derry of Henry Butcher says: "Much of the early numerically controlled automatic plant introduced in the mid-1970s was rapidly superseded by computer-controlled equipment and became technically and economically obsolete when only three or four years old. Since there are few viable alternative uses for such equipment it is worth very little on the second hand market."

"By way of comparison a standard general purpose machine tool will often have a significant resale value when it is well into its second decade of operation."

Butcher says prices will vary according to whether a piece of machinery can be adapted for use in certain sectors. For example, general sub-contract engineering and iron foundry work had remained in the doldrums and there was a considerable amount of equipment on the market following closures and company rationalisations. Demand for sheet metal working plant and wood-working machinery had held up better.

Stocks

"The unavoidable effect of the considerable quantity of second-hand plant that has become available for sale and the contraction in demand from industry, is that stocks held by machinery merchants have been running at very high levels," says Christopher Derry.

"With overflowing warehouses and a difficult market for their offerings, dealers have understandably become more selective about equipment which they purchase at auction sales. The buying pattern has certainly changed to the extent that the dealer will no longer bid for many types of machinery on a purely speculative basis, however cheaply it may be offered. Therefore at the lower end of the value scale, equipment is now much more readily scrapped."

Andrew Taylor

The last thing we'll do is sell you our oil.

Of course we're as keen as anybody to sell you our oil. But not before we've completed a detailed and logical analysis of your needs. After all, how can we sell the right products if we don't fully understand your particular problems.

This explains why our Texaco representatives are qualified to help in far more areas than mere technical knowledge of fuels and lubricants. The proof of this effectiveness lies in our longstanding relationship with many mining and construction companies.

Unlike some pitch-and-run suppliers,

we have perfected and proven other services that make your job as a manager or engineer much easier.

Massive earth moving equipment is not only expensive in capital outlay, but sudden and unscheduled breakdowns can be disastrous. No operator can afford to take chances on his lubricants, that's obvious. Less obvious are the additional services that Texaco supplies.

Cost savings and efficiency are built into the services we can provide. These range from stock depletion schemes to

comprehensive ranges of high technology lubricants and fuels available anywhere.

At Texaco we believe great products deserve even greater back-up service.

You won't find us shy to get our hands dirty.

our unique Texchek service. With Texchek our clients take samples from equipment in service and can have it scientifically analysed in our laboratories. The result of this analysis can reveal potential problems long before they become major breakdowns.

These and other services are available when you talk Texaco. All this is beside offering one of the most

Two ways with bank claims

THE INTERNATIONAL banking lifeboat, a combined operation of central banks, the Bank for International Settlements and the IMF was launched last summer to be greeted with general applause and relief; but as it wallows towards the last quarter of its first year of operation, there are growing signs of dissent even among the lifeboat crew.

Recently Dr Fritz Leutwiler, head of the Swiss National Bank and chairman of the BIS board, expressed his disquiet at the activities of some of his fellow central bankers—a very rare event in this normally most discreet of clubs. He singled out as imprudent the pressure being brought on commercial banks to renew and extend their interbank interbank lines.

This week the belated publication in England of the full text of a memorandum to the Senate banking committee of a distinguished group led by Dr Karl Brunner makes a more general assault on banking bailouts. Arguing that bad loans mean losses which ought to fall on those whose judgment was at fault, the report takes a robust attitude to defaults; they should be written off, it says, rather than being used to justify a more general assault on banking bailouts. Arguing that bad loans mean losses which ought to fall on those whose judgment was at fault, the report takes a robust attitude to defaults; they should be written off, it says, rather than being used to justify a more general assault on banking bailouts.

As if to illustrate this thesis, the news of the proposed takeover of Seafirst by BankAmerica Corporation has emerged on the day of publication of the Brunner memorandum. Seafirst's troubles arose from its unwieldy support of the wildly inflated lending of the Penn Square bank in energy development. The Federal Reserve allowed Penn Square to fail, and provided no protection for its interbank depositors. Seafirst was kept afloat by its lender of last resort, but the management went, and now the shareholders are offered less than book value.

This approach meets the Brunner criteria perfectly: it has been non-inflationary, and has cost the U.S. taxpayer nothing. Bank depositors, except in the instant market, have been fully protected throughout, but bankers have learned a sharp lesson in prudence. Alert prudence is a better way of keeping credit growth in check than high interest rates, and this and similar episodes should help to reduce rates. A fall in rates, in turn, is easily the most effective way of turning over

A formula for export credits

THE industrialised nations this week have their best opportunity since 1978 to remove from the trading system a persistent irritant, which in recent years had often chimed with other issues to produce serious tensions between the U.S., the EEC and Japan: this is the level at which interest rates are set for export.

Each year, the 22 countries in the OECD export credit group, known as the Consensus, grapple with the question of whether rates should go up or down and which country should pay what rate. Each year the Consensus seems on the verge of breaking up, opening the way to unilateralism, and whether by official support of unrealistically low interest rates, a European habit, or by offering inordinately long maturities, a U.S. habit.

This week, certainly, there will be a huddle about interest rates. There has already been a foray into the EEC discussions when agreement was reached that they should go down but no accord on how much. But more important is the longer run is the EEC acceptance that there should be a semi-automatic mechanism which would work to keep Consensus interest rates aligned with market rates.

Technically, the way in which such a mechanism would work is not clear and, indeed, there are bankers who doubt whether it is practical. But the central cog of the mechanism would probably be a Consensus interest rate based on the weighted average of long-term money market rates in the Consensus countries, with provisions to protect credit-giving countries whose domestic rates stray too far from what would be established as the norm.

The rate would change at pre-arranged intervals, thus reflecting the movements in commercial interest rates. Clearly, the system is not ideal, but it is worth a try as the best that can probably be

questionable loans into sound and serviceable ones.

By contrast, a general effort to reschedule all existing loans, sound and unsound, in many ways actually hampers the recovery which would equally help to solve the problem. Banking spreads rise to cover enhanced risk, and banks must bid for larger deposits to finance the inevitable growth of loans to borrowers who cannot find the interest on their debts. The expansion of bank balances tends to be reflected in unruly money supply figures, arousing fears of future inflation and adding to the pressure for high rates. Finally, large government borrowings to finance IMF expansion will in due course depress the bond market.

When it is stated in these terms, the case for severity—or at least for a fairly harsh realism—looks unassailable. Unfortunately, though, it is easier to preach such realism for the Eurozone than to put it into practice. Sovereign borrowers can hardly be forced into bankruptcy like a failing commercial enterprise, leaving the assets available for new management; this is a political as well as a banking question. Lender-of-last resort facilities can also be difficult to provide where a central bank concerned had to borrow foreign currency to support its own banks.

However, there are steps which could sensibly be taken towards greater realism. Other central banks could more energetically follow the example of the U.S. Comptroller of the Currency in insisting on adequate and uniform provision in bank balance sheets against questionable loans. Such a writing-down of inflated values might reduce the resistance of the banks to proposals for the radical reconstruction of some irredeemable short-term debt into medium-term loans, to be sold on where possible in the bond market.

Dr Leutwiler also has a sound point: the interbank market proved to be an engine of illusion, in which depositing banks foresaw no difficulty in calling their money in. Lending banks assumed that they could always refinance short loans which were rolled over into long ones. This market certainly needs no official approval and underwriting. As Mr Stanislas Vassilovitch argues in a current article, commercial banks should have no long-term role in sovereign lending, where they have no effective sanctions. The guiding principle for central bank operations should surely be that the aim is not to reduce rates, but to cut it down to size in an orderly way.

Its main constituent is social partnership—the readiness of labour and management, but also of other special interests, such as the peasantry, to settle grievances by compromise. It is an attitude rooted in Austrian history and almost amounts to voluntary wage and price restraint, arrived at on a fairly informal basis.

The second main constituent is a hard currency policy which has enabled the Austrian schilling to become linked de facto to the D-mark. This policy amounts to a recognition of the country's extreme dependence on both exports and imports. Logically, it has forced everyone to agree to a firm stand against inflation.

So much is common ground in Austria. But great controversy surrounds the policy of deficit spending adopted to protect employment. The non-socialist parties maintain that a bewildering confusion of public works programmes has driven the budget into intolerable deficit. Sooner or later—probably sooner, the non-socialists say—the bill will be presented.

They will, therefore, exert their newly-enhanced political influence to achieving spending cuts, limited though they will be, and to diverting more money from state-owned industry to the private sector. The latter is populated mainly by small business.

The importance to Austria of small business cannot be over-estimated. By nature paternalist, it provides a cushion against unemployment. By virtue of its smallness, it can be, and often is, very adaptable. It is, therefore, called upon to play a prime role in keeping Austrian industrial structures competitive. A small increase of the Austrian share in world export markets last year has given rise to the hope in Vienna that a necessary restructuring is under way.

What is the statistical score-boat? A current account surplus last year of Sch8bn (about \$200m), expected to rise to Sch10bn this year; real growth of GDP by 1.1 per cent last year, with 0.7 to 1 per cent forecast for 1983; an unemployment rate expected to rise only marginally from 3.7 per cent in 1982 to 4.5 per cent in 1983; and an

Kaiser Bruno of Austria is no more. Dr Bruno Kreisky, Chancellor since 1970, may yet have a role to play in his country's politics—behind the scenes, or on stage. But a quasi-imperial ability to impose his wishes, seemingly at will, vanished on Sunday, together with the absolute parliamentary majority of the Socialist Party.

Almost 17 years of one-party Government—first by the conservative People's Party, then by the Socialists—are over. During that time, the Austrian tradition of compromise, checks and balances and of consensus was never far from the surface. Now it returns to politics at the highest level. Coalition government of one form or another looks inevitable, falling the quite unexpected.

Such an outcome corresponds not only to the arithmetic of the election result but also to the popular mood. As islanders feeling threatened by the surrounding tide of world recession, Austrians have turned away from adventure. The reformist wave which brought Dr Kreisky to power has subsided. Closing ranks is the order of the day for the man in the street.

It is not especially hard to pin down why this should have happened. Dr Kreisky himself identified the reason on election night. After 13 years in power, the Socialists inevitably suffered from wear and tear. To that, one must add that, at 72, the Chancellor was showing his age. He suffers from a kidney complaint and often looks tired, even listless. But the mere passage of time only very partly explains what has gone wrong for him. Dr Kreisky lost his absolute majority because of the patent fact that the world has greatly changed since he became Chancellor.

Though Austria has remained almost immune to recession and inflation, at least so far, unemployment did creep up last year. At the same time, the Government's continuing efforts and its expenditure to preserve jobs in deficit-ridden state-owned industry caused growing budget deficits. The attempt to hold them down to 2.5 per cent of GDP appears to have succeeded in 1981. But last year, the deficit was once more well up and this year it promises to be no better.

Dr Alois Mock, leader of the People's Party, made much of this during the campaign, as of a prospective, slight increase in unemployment. The Socialists stuck to their guns. More debt, they said, was better than more unemployment. It is not a message that goes down well in countries where economic policy is equated with good housekeeping.

Besides encouraging this sort of defensive popular reaction, the recession also seemed to

Austria's election

Kreisky: the Kaiser bows out

By W. L. Luetkens in Vienna

THE POLITICAL PICTURE

SOCIALIST PARTY. Seats in new parliament: 90 (provisionally). In power alone since 1970, in coalition with the People's Party from the end of the war until 1966. Social democratic, but with a surviving tradition of state intervention in the economy. Base: trade unions.

Led by Dr Bruno Kreisky, Chancellor since 1970, when he modified party policy to appeal to reformist middle-classes traditionally opposed to Socialists. One-time Foreign Minister. Born 1911. Dr Kreisky has said he will resign as Chancellor and has recommended Fred Sinowatz, his Vice-Chancellor, as his successor.

PEOPLE'S PARTY. Seats in new parliament: 81 (provisionally). Largest party, until displaced by the

Socialists in 1970. Combines conservative with Christian social tradition. Base: small business, urban middle class, rural.

Led since 1979 by Alois Mock, a representative of the party's trade union wing. Served on Austrian delegation to OECD, 1962-66. Born 1934.

FREEDOM PARTY. Seats in new parliament: 12 (provisionally). Perpetually the smallest of the three parties in Parliament. Continental-style liberal with left and right wing. Base: urban middle class.

Led since 1980 by Norbert Steger. Made his mark in student politics. One-time member of the celebrated Vienna Boys' Choir. Born 1934.

change Dr Kreisky. He came to power (as Herr Willy Brandt's Social Democrats did in West Germany one year before) largely by putting his party on to a social democratic, rather than a socialist, course. But a few years later, Dr Kreisky is reported to have said of himself that the older he grew, the further he moved to the left.

The change may have been more apparent than real. But it was not calculated to encourage what became known as "Kreisky's voters," meaning middle-class people who have deserted their own parties in the election of 1971. They were not satisfied with the Government's increasingly interventionist economic policy and the costs it entailed.

Much younger than the Chancellor, these "Kreisky voters"

had no personal memories of the recession of the 1930s, which drove unemployment in Austria to about 40 per cent. They had no first-hand experience of how that recession led on to fascism and war. To Dr Kreisky, these were memories of paramount importance: he had been imprisoned both by the Nazis and by the authoritarian regime in power before the German annexation of Austria in 1938.

Dr Kreisky's reputation was built on his conduct of external affairs as Foreign Minister in the early 1960s. Once he became Chancellor, he retained his interest in this subject, making contributions to world affairs well beyond what might be expected from a small, neutral state. He was one of the pioneers of détente in Europe and one of the first statesmen in

Western Europe to try to bring the Palestinians into the search for a Middle East settlement.

His standing abroad was largely based upon his creative contributions to world politics. At home, Dr Kreisky primarily aroused suspicion for his pains to bring about a "Grand Coalition" with the People's Party, which lasted from 1967 until 1966. The Chancellor's preferred successor, Herr Fred Sinowatz, has also spoken against a renewed "Grand Coalition". But both men became much less categorical as the election results came in.

That was not mere cageiness; they know that Herr Anton Benya, grand old man of the trade union federation, hankered after a Grand Coalition.

In spite of the many uncertainties, two points can be firmly made. First, the realisation of the budget deficit in its little Austria's position in the world preclude drastic changes to economic policy. Even in the unlikely event of an anti-Socialist coalition emerging, changes will be limited; a little lessening of money for public works, a little more for small business in the form of tax incentives. The transition will be nothing like that from Labour to Mrs Thatcher in Britain.

Second, social consensus to which most Austrians ascribe their freedom from strikes and their economic successes will not be cast away; it could even emerge strengthened.

dead ever since and may eventually have to be knocked down.

Zwentendorf is important for two reasons not connected with energy policy. It was the first occasion on which the environmentalists and anti-nuclear movement showed its teeth in Austria. The referendum also produced a spectacular breakdown of the usual consensus in Austrian politics.

The Government wanted nuclear power; so did the trade unions; so did industry and a majority in the People's Party. But because Dr Kreisky seemed to turn the referendum into a personal vote of confidence in himself, the People's Party did not campaign for the power station. From an opposition viewpoint, the Chancellor had become too big for his boots and needed a lesson.

An important truth underlay

this attitude: Dr Kreisky has striven for social and political consensus, but it has usually been consensus around his own person and party. Many opposition supporters believe that his aim in this year's election campaign was to make the eclipse of the People's Party permanent.

If that was so, he has failed. Consensus will survive what has happened, and will return in its classic form of coalitions or understandings between parties and between the many lobbies which have the last word in so much of the country's affairs.

A case can be made that such backstage management lends itself to corruption and even to cynical manipulation. Corruption there occasionally is: a few spectacular court cases have been heard, but since they involved men from both big parties, the effect on the election result cannot have been great.

As regards disenchantment with the establishment, it is a notable lesson of the election that voters have been far less infected than once thought. Pure protest parties did increase their share of the 4.7m valid votes to 4 per cent from 1 per cent in 1979, but in practice made no impact.

At this stage, nobody can be sure what sort of government will emerge. Most probably, a coalition between the Socialists and the liberal Freedom Party. It is probable that, as party chairman, Dr Kreisky will work for that. In the past, he has rejected a revival of the so-called Grand Coalition with the People's Party, which lasted from 1967 until 1966. The Chancellor's preferred successor, Herr Fred Sinowatz, has also spoken against a renewed "Grand Coalition". But both men became much less categorical as the election results came in.

That was not mere cageiness; they know that Herr Anton Benya, grand old man of the trade union federation, hankered after a Grand Coalition.

In spite of the many uncertainties, two points can be firmly made. First, the realisation of the budget deficit in its little Austria's position in the world preclude drastic changes to economic policy. Even in the unlikely event of an anti-Socialist coalition emerging, changes will be limited; a little lessening of money for public works, a little more for small business in the form of tax incentives. The transition will be nothing like that from Labour to Mrs Thatcher in Britain.

Second, social consensus to which most Austrians ascribe their freedom from strikes and their economic successes will not be cast away; it could even emerge strengthened.

THE INGREDIENTS OF AN ECONOMIC SUCCESS STORY—SO FAR

AUSTRIAN economic success and management have fascinated outsiders for years, especially the socialists among them. The Austrian model, as it has been called, has attracted men like Mr Georges Mitterrand, now the French President, and Mr Denis Healey, deputy leader of the British Labour Party. One thing that they have generally learned is that the Austrian model is not really exportable.

Its main constituent is social partnership—the readi-

ness of labour and management, but also of other special interests, such as the peasantry, to settle grievances by compromise. It is an attitude rooted in Austrian history and almost amounts to voluntary wage and price restraint, arrived at on a fairly informal basis.

The second main constituent is a hard currency policy which has enabled the Austrian schilling to become linked de facto to the D-mark. This policy amounts to a recognition of the country's extreme dependence on both exports and imports. Logically, it has forced everyone to agree to a firm stand against inflation.

So much is common ground in Austria. But great controversy surrounds the policy of deficit spending adopted to protect employment.

The non-socialist parties maintain that a bewildering confusion of public works programmes has driven the budget into intolerable deficit. Sooner or later—probably sooner, the non-socialists say—the bill will be presented.

They will, therefore, exert their newly-enhanced political

influence to achieving spending cuts, limited though they will be, and to diverting more money from state-owned industry to the private sector. The latter is populated mainly by small business.

The importance to Austria of small business cannot be over-estimated. By nature paternalist, it provides a cushion against unemployment. By virtue of its smallness, it can be, and often is, very adaptable. It is, therefore, called upon to play a prime role in keeping Austrian industrial structures competitive. A small increase of the Austrian share in world export markets last year has given rise to the hope in Vienna that a necessary restructuring is under way.

What is the statistical score-boat? A current account surplus last year of Sch8bn (about \$200m), expected to rise to Sch10bn this year; real growth of GDP by 1.1 per cent last year, with 0.7 to 1 per cent forecast for 1983; an unemployment rate expected to rise only marginally from 3.7 per cent in 1982 to 4.5 per cent in 1983; and an

inflation rate expected to decline from 5.4 per cent to 3.7 per cent.

Where is the catch? There may not be one, if the world economy goes right. As a marginal supplier to world markets, Austria would immediately profit if demand in the world, and above all in West Germany, were to pick up strongly. If the world economy goes wrong, another attempt may have to be made to buy Austria's way out of trouble. That could be expensive.

Men & Matters

Power vacuum

There's a job going at around £25,000 at CEBG headquarters in the City—as anyone calling the director of public relations there, about 11.00 am yesterday would have found out.

Michael Pickering, whose arrival from British Airways as recently as last summer almost coincided with Sir Walter Marshall (who followed Glyn England as chairman) has left abruptly "by mutual agreement."

"Efforts were made on both sides to establish a *modus vivendi* but it didn't work out," says John Baker, board member responsible for commercial affairs and public relations, diplomatically. Baker was responsible *via* head hunters—for Pickering's appointment.

But Baker acknowledges that the final arbiter in any new appointment is going to be his chairman who stands, above all, a spokesman who will be adroit at handling the board's nuclear affairs. Pickering, with a long career in British Airways, had no experience of the nuclear industry and the kind of opponents it begot.

Pickering himself tells the story of how he consulted an old school chum Christopher Ward, editor of the Daily Express (until he too was abruptly replaced last week). Ward replied helpfully that he supposed the Express ought to be against nuclear energy...

But if asked why, he couldn't offer any good reason. Pickering really came to grief over a World in Action programme early this year when, according to Marshall, undertakings were asked for and given before he agreed to appear, but were not honoured by the TV team. Pickering's was not to intervene as his beleaguered chairman wished him to.

While Marshall seeks his new spokesman—probably in the

nuclear industry which has long experience of the williness of its opponents—those left in the most invidious position round at the CEBG are two newish recruits respectively head of press relations and head of public affairs.

Pickering has recently recruited them from British Airways.

Stamina needed

The inquisitive Fourth Estate and its constant inquiries to the Lloyd's insurance market has led to a shake-up in the information department there.

My man in Lime Street says that Lloyd's is poised to announce that John Bryant, an assistant editor of the Daily Mail, is to become director of public affairs.

He seems to have one obvious qualification for the job. He ran in the last London marathon and notched up an impressive 2 hours 48 minutes time.

Currently meetings at Lloyd's have taken on a marathon nature and require a certain stamina.

The last council meeting lasted eight hours and those responsible for public affairs often have to sit in on the proceedings.

Another long distance runner, who chairs the internal Lloyd's information policy board, is Peter Miller, chairman of the Lloyd's broking firm Thomas R. Miller, and a member of Lloyd's council. Miller, who is a personal friend of Bryant, put his name forward for the job and feels the choice is ideal.

Cab-grams
Couriergram, the new private enterprise telegram service, is seeking the Royal seal of approval by being allowed to deliver one of the Queen's 100th

Birthday greetings telegrams to the next loyal subject to score the century.

Couriergram deserves a try simply to see if its new messages possess the penetrating qualities of the late lamented telegram.

When a company was falling down on the job, failing to deliver and ignoring the customer's entreaties, a telegram to the chairman used to be the most certain way to galvanize the body corporate into some semblance of life.

The slower Telegrams now offered by British Telecom have not filled that gap.

Couriergram is sensibly relying upon a well-proven British network to carry its messages—some 750 local taxi companies.

Courier and the cashmen together reckon they can deliver a message almost anywhere in the country within two hours of it being phoned to a central office in Northampton.

At rates of between £5.95 and £11.95 for a short message, depending upon the remoteness of the destination, we will be forced to choose our words carefully.

Candles are out

Shareholders in one British multinational group are used to opening the annual report and finding that they have invested in a company whose objects are "to carry on business as soap makers, candle makers, seed crushers, paper makers, printers, builders, carpenters, and stone merchants..."

The soap, and the seed, but little else may enable the eagle-eyed to identify the company as Unilever plc.

Sadly, these splendid corporate purposes are now to be cast aside.

Unilever, which was estab-

lished as Lever Brothers in 1890, is apparently determined to drag itself thoroughly into the closing years of the Twentieth Century and is proposing to change the old Memorandum of Association. The substitution will have an altogether greyer and less exciting quality and will be included in the 1983 report.

Apart from the old memorandum of interest as an item of industrial archeology it also confounds the notion that conglomerates are modern invention.

By George!

The British community in Kampala, Uganda's capital, is determined not to let the occasional round of gunfire at night deter it from traditional pursuits.

Nearly 100 of its members turned up in black tie and dinner jackets at the Speke Hotel the other evening to hold the annual banquet of the Royal Society of St George-Uganda branch.

A huge baron of beef was toted in by the honorary carvers to appreciative applause from guests. Hotel staff looked on tolerantly as the British enacted their tribal ritual. Beef, Yorkshire pudding, horseshoe sauce and vegetables, were followed by plum pie and fresh cream.

The raffle was duly drawn: "the prize" called out a wag "is a weekend in Kampala."

Cheep advice

From the latest issue of the British Medical Journal. What do you get if you kiss a budgeter?

Cherpes—and its untweaked.

Observer

After all is said and done

When the affairs of business are over and the last resolution has been made, then is the time to reflect upon a time well spent at the Inn on the Park. It goes without saying that the Inn on the Park is one of London's more elegant meeting places.

As a business arena, however, this internationally celebrated hotel at the corner of Hyde Park boasts facilities second to none.

The superbly appointed suites lend themselves to any function, whatever the matter in hand, whatever the numbers involved.

Our famous Ballroom has been entirely redesigned—even more of an elegant showpiece now—and any gathering may be held there in a style that is nothing short of magnificent.

Whilst on the subject of magnificence, there's the superb cuisine. And the impeccable service.

Our business clientele can expect only the very highest standards—what else from a hotel whose restaurants are acknowledged to be the finest in London?

It must be said that a business meeting at the Inn on the Park will never be a run of the mill affair. And if it must be said, say it at the Inn on the Park.

To find out more, simply call our Banqueting Manager, David Petrie on 01-499 0888.

Merrill Lynch sees profits rise fourfold

By William Hall in New York

MERRILL LYNCH, the biggest U.S. securities group, increased its net earnings in the first quarter of 1983 from \$30m a year ago to \$127m, and announced that it was increasing its quarterly dividend by 11 per cent.

Primary earnings per share in the first quarter of 1983 totalled \$3.07, compared with 18 cents a share in the comparable period of last year. The latest quarter was the best in Merrill's history after the record fourth quarter of last year, when the company earned \$3.45 a share.

Merrill Lynch announced yesterday a two-for-one split of its common stock in the form of a stock dividend payable on June 27. This is the first stock split since Merrill became a public company 12 years ago. Merrill's quarterly dividend has also been increased to 40 cents a share on present (pre-split) shares. This is the second increase in Merrill's dividend in the past six months, and the fifth in the past five years.

Mr Roger Rick, chairman of Merrill Lynch, said yesterday: "While the strong stock market and record trading volume helped us achieve these records, it is once again a case of broad-based strength generated by the many different services and products we offer our customers."

Commission revenues in the latest quarter rose 93 per cent to \$411m and principal transaction revenues rose 59 per cent to \$221m. Investment banking revenues rose 114 per cent to \$188m.

William Hall in New York looks at BankAmerica's \$400m rescue bid

How Seafirst Corporation swiftly fell from grace

BANKAMERICA'S \$400m rescue of Seafirst Corporation, the Seattle-based banking group which ran into serious difficulties in energy lending, demonstrates the speed with which a fine bank with a distinguished record can fall from grace.

Until last July, Seafirst had a reputation as one of the best managed regional banks, which was growing quickly outside the traditional market in the Pacific northwest where it already had banking relationships with two out of three households in the state of Washington. Under the leadership of Mr William Jenkins, who had run the bank for the past 20 years, it had notched up an impressive growth record. Dividends and earnings had grown every year during Mr Jenkins' time at the top and assets had grown ninefold to some \$11bn. Then disaster struck.

The first signs of Seafirst's problems came last July when the group issued a terse statement following the closure of Penn Square Bank of Oklahoma City. It said that as a result of its participation in Penn Square loans, it expected a large increase in loan losses.

A week later it issued its second-quarter results, which showed a net loss of \$56.2m, and it announced

that it had set up \$125m provisions to cover estimated future losses on loan participations from Penn Square. Seafirst, which had only been in energy lending in a big way for two years, had bought some \$400m of loans from Penn Square and these loans made up the biggest single segment of its \$1bn energy loans portfolio.

At the time, few people fully appreciated the scale of Seafirst's problems. Mr Jenkins described the Penn Square involvement as a "body blow that slows you down a little." By the third quarter of last year, Seafirst was back in the black, and even when it set aside an extra \$45m for its Penn Square and other energy-related lending the assumption was that Seafirst would weather its problems, albeit with a badly battered reputation.

Just before Christmas, Mr Richard Cooley, the 59-year-old head of Wells Fargo, the third biggest banking group on the west coast, announced that he was quitting to take the job at Seafirst, replacing Mr Jenkins, who had already announced his intention to retire.

The arrival of Mr Cooley at Seafirst, plus some other Wells Fargo executives, coincided with a major reshuffle of Seafirst's senior management team.

There had clearly been an unprecedented breakdown in the credit review procedures at a bank that was eager for growth. It was how one banker summed up the problems facing Mr Cooley and his new executive team. Another banker describes Seafirst as "a bank hungry for growth and intoxicated with its past success."

Mr Cooley's first act was to put Mr Glenhall Taylor, one of his men from Wells Fargo, into the key credit

decision-making committee as chairman. He also brought in Arthur Andersen, the accountants, to review the group's loan portfolio independently. Finally, he put together a \$1.5bn standby agreement with more than a dozen U.S. banks which was designed to bolster confidence in Seafirst in case it ran into funding difficulties.

Seafirst's problems started when it moved out of its traditional north western markets and began hunting for lending business in the oil

patch. Mr Cooley began to redirect the bank back to its traditional markets and emphasised its regional strengths.

For a while, it looked as if Mr Cooley's efforts to clean up Seafirst's energy lending portfolio and maintain its independence, albeit on a shorter lease than before, was beginning to work. It soon became obvious that Seafirst would need some extra capital to boost its net worth, which had shrunk as a result of the loan losses. Mr Cooley hired Salomon Brothers to help the bank find the \$200m it wanted. But even as recently as last week it still believed that it could raise the money while retaining its independence.

However, last Friday afternoon, Seafirst directors went into a special meeting to review the first-quarter results, which showed a loss of \$133m - more than double what the market had been expecting - and further heavy losses on its energy loans plus a growth in non-performing loans to around 12 per cent of the loan portfolio.

The scale of the losses and their impact on Seafirst's capital base were such that there was a very real fear that release of the figures might precipitate a run on the bank. Consequently late on Saturday evening Seafirst announced

that it had agreed to merge with BankAmerica.

Seafirst had lost its battle to stay independent.

Both sides were trying to put a brave face on the affair over the weekend. Mr Sam Armacost, chief executive of BankAmerica, said: "It is difficult to imagine two organisations with a better combination of franchises or whose operations and values are more compatible and mutually reinforcing."

Mr Armacost says that he is confident that Seafirst's problems are manageable. "Given the size of the charge-off already made, we believe the downside risk is containable and that the strengths we can bring to the table will permit the company to rise over its present problems and really work on achieving its full potential," he says.

But despite the brave words and BankAmerica's promise that it intends to keep Seafirst as an independent bank with its own management and board of directors, there can be no disguising the fact that Seafirst has been rescued because of the excesses of its energy lending activities. It also demonstrates the ease with which once powerful U.S. banks can be toppled from grace.

Earnings jump at Sears Roebuck

By Richard Lambert in New York

SEARS ROEBUCK, the giant merchandising and financial services group, reported a sharp jump in first-quarter profits. Nearly all sides of the business contributed to the increase. The group said it expected revenues would continue to strengthen over the rest of the year, although net income was unlikely to rise at the same rate as in the first quarter.

Sales in the first three months rose from \$6.43bn to \$6.9bn and net income jumped from \$71.4m, or 20 cents a share, to \$164.8m, or 47 cents a share.

Revenue on the merchandise side rose from \$4.26bn to \$4.39bn. This business swung from a loss of \$23.2m to a profit of \$18.2m.

The group attributed most of the gain to lower interest rates and tight cost controls.

Income from the Allstate Insurance company rose from \$118.1m to \$135.7m, while Dean Witter Financial Services reported a profit of \$40.2m compared with a loss of \$7m a year earlier.

Sears said this was largely a reflection of the improved investment climate. The group's savings and loan association reported its first profit since 1980.

Sears also reported a profit of \$3.3m on its real estate side, compared with a loss of \$2m in the same period of 1982, thanks in part to the sale of a share in two shopping centres. But Sears World Trade, the group's newly established international trading company, reported start-up losses of \$1.3m.

● Sears Roebuck is selling its loss-making chain of department stores in Brazil to a consortium made up of a Brazilian company and Vindex International, the major Dutch retailing concern, writes Andrew Whitley from Rio de Janeiro.

The sale price of between \$40m and \$50m will be finalised in the coming months.

CONTRACTS AND TENDERS

REPUBLIQUE ALGERIENNE DEMOCRATIQUE ET POPULAIRE

(The Democratic and Popular Republic of Algeria)

MINISTRE DE L'ENERGIE ET DES INDUSTRIES PETROCHIMIQUES

(Ministry of Energy and the Petrochemical Industries)

ENTREPRISE NATIONALE DE FORAGE

(National Drilling Company)

NOTICE OF NATIONAL AND INTERNATIONAL INVITATION TO TENDER No. EX46/83

A notice of National and International Invitation to Tender is hereby issued by the Entreprise Nationale de Forage, "ENAFOR", for the supply of:

Item No 1-7,100 pairs of safety shoes

Item No 2-4,000 Pairs of "FOREUR" type working gloves

This invitation to tender is addressed solely to manufacturing companies, assemblages, agents and other intermediaries being excluded in accordance with the provisions of Law No. 78-42 of the 11th February 1978, concerning State monopoly on Foreign Trade.

Tenders interested in this invitation to tender may obtain specifications from: ENAFOR-Département Engineering et Approvisionnements (Engineering and Supplies Department)-1, Place BIR MARCHAL-2, BORDJ-ALGER (ALGERIA), as from the date of publication of this notice.

Tenders, drawn up in eight (8) copies, must be sent in a double sealed and registered packet; the envelope must be anonymous without the tenderer's heading, initials or stamp, and must bear the endorsement:

"APPEL D'OFFRES NATIONAL ET INTERNATIONAL No. EX46/83-CONFIDENTIAL-A NE PAS OUVRIR-A L'ATTENTION DE MONSIEUR LE CHIEF DE DEPARTEMENT ENGINEERING ET APPROVISIONNEMENTS (National and International Invitation to Tender No. EX46/83-Confidential-Do not open-For the attention of the Head of the Engineering and Supplies Department).

Tenders must arrive by 26th May 1983, at the very latest. Any tenders arriving after this date will be rejected.

Selection will be made within 120 days from the closing date of the invitation to tender.

REPUBLIQUE ALGERIENNE DEMOCRATIQUE ET POPULAIRE

(The Democratic and Popular Republic of Algeria)

MINISTRE DE L'ENERGIE ET DES INDUSTRIES PETROCHIMIQUES

(Ministry of Energy and the Petrochemical Industries)

ENTREPRISE NATIONALE DES TRAVAUX AUX Puits

(National Company for the Exploitation of Oilwells)

NOTICE OF INTERNATIONAL INVITATION TO TENDER NUMBER 0274/DIV.

A notice of International Invitation to Tender is hereby issued by the Entreprise Nationale des Travaux aux Puits for the supply of:

LAMPS AND ACCESSORIES

This invitation to tender is addressed solely to manufacturing companies, assemblages, agents and other intermediaries being excluded in accordance with the provisions of Law No. 78-42 of the 11th February 1978, concerning State monopoly on Foreign Trade.

Tenders interested in this invitation to tender may obtain specifications from the following address: Entreprise Nationale des Travaux aux Puits, rue de la Capitale Algérie, Casbah, Hussein-Dey, ALGER (ALGERIA) - Département Approvisionnement et Transport, as from the date of publication of this notice.

Tenders, drawn up in five (5) copies, must be sent in a double sealed and registered packet to the "Secrétariat du D.A.T. (Supplies and Transport Department) at the above address. The outer envelope must be completely anonymous without heading and must bear the endorsement: "APPEL D'OFFRES INTERNATIONAL, Numéro 0274/DIV. Confidential - A ne pas ouvrir" (International Invitation to Tender Number 0274/DIV. Confidential - Do not open).

Tenders should be despatched to arrive by 1200 hours on Saturday, 28.5.1983, at the very latest. Any tenders arriving after this date will be rejected.

Selection will be made within 180 days from the closing date of this invitation to tender.

Downstream side hits Standard Oil Indiana in quarter

BY WILLIAM HALL IN NEW YORK

STANDARD OIL COMPANY Indiana, the fourth biggest U.S. oil company and the first to report first-quarter results, said its net income fell by 15 per cent to \$39m in the first three months of 1983.

Earnings per share in the latest period totalled \$1.36 against \$1.60 a year ago. Group revenues rose by 4 per cent to \$7.5m.

Mr John E. Swearingen, the group's chairman and chief executive, says that "the earnings decline was largely attributable to poorer results for U.S. refining, marketing and transportation operations which have suffered from severely depressed margins as a result of competitive gasoline market conditions." However, margins strengthened somewhat towards the end of the first quarter.

Standard Oil Indiana is the fourth biggest refiner in the U.S. and markets over 5 per cent of petroleum products sold in the U.S. It is also the second biggest natural gas producer.

The group says that its refining, marketing and transportation operations lost \$58m in the first quarter against a profit of \$13m a year ago.

First-quarter earnings were also affected by lower crude oil prices, but these were substantially offset by reduced crude oil excise tax payments in the U.S. and higher foreign production volumes.

The group's worldwide capital spending and exploration spending fell by 37 per cent in the first quarter to \$687m.

Coca-Cola advances

BY OUR FINANCIAL STAFF

COCA-COLA, the world's biggest soft drinks maker, lifted first-quarter net earnings from \$107.6m or 87 cents a share to \$122.1m or 90 cents. Revenues rose from \$1.27bn to \$1.32bn.

The company said the increase, along with its strategy for soft drinks growth, would enable it to continue to achieve excellent results in the latter half of 1983 and beyond.

Shipments of the Coca-Cola USA division's syrup and concentrate rose 8 per cent. The profits performance at the foods division was strong, but Wine Spectrum profits suffered from price competition with domestic producers and imported wines.

Earnings at Columbia Pictures Industries contributed significantly to total first-quarter profits.

SmithKline ahead 10%

BY OUR NEW YORK STAFF

NET income of SmithKline Beckman, the U.S. pharmaceutical group, rose 10 per cent to \$124.8m in the first three months of 1983. Sales rose by nearly 8 per cent to \$790m, and the increase would have been sharper but for the strength of the dollar, which held down growth on the international side.

In ethical pharmaceuticals, the group's two big sellers - Tagamet and Ancef - recorded "solid" advances, mainly in the U.S.

"Internationally, Tagamet is achieving notable success in Japan," the group added.

Net earnings per share for the quarter rose from \$1.37 to \$1.50.

AEG-Kabel announces healthy results

By John Davies in Frankfurt

AEG-KABEL, the sturdy cable-making subsidiary of the West German electrical group, AEG-Telefunken, has reported further healthy results.

Despite recessionary weakness in markets, sales revenue was stable at DM 1,072m (\$440m) and net earnings after tax rose 17.5 per cent to DM 14.4m.

A dividend of 13 per cent is proposed, compared with a combination of a 14 per cent dividend and 2 per cent bonus last year.

Herr Walter Birkenh, the chief executive, said that the company had benefited from structural improvements and energy-saving measures.

The overall volume of cable sales increased, with electricity and telecommunications cable business making gains, while there was a decline in business for high-power transmission wires and winding wires.

Investment was boosted by 35 per cent to DM 24.4m.

Hertie move to restructure Bilka shops

By Our Frankfurt Correspondent

HERTIE, West Germany's third biggest retail stores group, is casting a critical eye on its "problem child" - its slightly down-market, Bilka shops, which have been making losses for the past 10 years.

The group has declared that it is determined to restore profitability at Bilka, whose 3,900 employees turned in sales revenue of DM 513m (\$210m) at 37 stores last year.

Hertie said that high overhead costs were the main reason for Bilka's losses. There was a need for some restructuring and closer co-operation with the main Hertie concern, notably in administration and purchasing.

The Hertie parent company itself has been wrestling with serious problems, but almost halved its operating losses last year and expects to break even this year. Exact results have not yet been published.

It has also embarked on store modernisation, with an emphasis on quality and design.

Union Oil falls 24%

By Our New York Staff

FIRST QUARTER net income of Union Oil, the Los Angeles-based petroleum company, fell by 24 per cent to \$128.3m. Earnings per share fell 23 cents to 74 cents in the first quarter.

The company blamed its lower earnings on a reduction in profits on refining and marketing operations, a drop in natural gas sales and a fall in prices and volumes in its chemicals business. Total revenues fell marginally to \$2.47bn in the first quarter.

Flat orders leave Digital down \$28m

BY OUR NEW YORK STAFF

THIRD QUARTER net income of Digital Equipment Corporation, which claims to be the world's second largest computer manufacturer, fell from \$107.5m to \$79.8m. The company blamed the setback on lower than anticipated equipment sales, price reductions and higher research and engineering expenses.

Digital said "the uncertain status of an economic recovery both in the U.S. and overseas" as still a major concern. Customer orders had re-

mained flat in the latest period, and start-up delays on a number of new products had kept product shipments below expected levels.

Revenues in the latest three months were marginally ahead at \$1.1bn. Net income after nine months is down from \$295.4m, or \$5.33 a share, to \$197.6m, or \$3.50 a share. Operating revenues so far this year amount to just over \$3bn compared with \$2.8bn in the first nine months of 1982.

First class.

International Treasury Management, Ltd.

We are brand-new. But we have years of experience providing first-class global financial services.

ITM Ltd. is a joint venture of The Hongkong and Shanghai Banking Corporation and Marine Midland Bank. We are here to help you manage your international financial exposures with broader and more in-depth services.

To meet your world-wide requirements, only ITM Ltd. has coordinated and fully integrated offices operating in New York, London, Singapore, and Hong Kong—the world's money centers.

Our wider spectrum of information, advisory and transaction services, is tailored to the financial needs of international corporations and institutions. Our global services are designed for maximum flexibility to meet individual needs. So when financial challenges surface, you are provided with the appropriate solutions.

An integral part of our services is our flexible computer software programs on 24-hour access via a satellite network. These data services encompass: foreign exchange rate forecasts and analysis for 21 currencies; market reports with interpretations, updated six times a day from the major markets; and analysis of your foreign exchange contract portfolio.

We are an organization with ideas. We offer corporate advisory and consulting services that specialize in exposure management, treasury systems development, training, and tactical/strategic hedging advice.

Our innovative transaction techniques give you superior capabilities in long-term debt conversion, assessment, guarantees, and swaps.

Because two leading financial institutions have combined as never before, you now can have a complete grasp of immediate economic and financial developments throughout the world.

Our offices may be reached at the following telephone numbers: New York, (212) 440-5690; London, (01) 638-9411; Singapore, 2240-333; Hong Kong, (5) 256145.

International Treasury Management, Ltd.

A partnership between The Hongkong and Shanghai Banking Corporation and Marine Midland Bank.

Interim Report and Dividend Announcement for the six months ended 31 March, 1983

Interim Report

The unaudited net operating income after provision for taxation and after transfers to internal reserves amounts to R44.5 million which represents an increase of 36% over the same period last year.

General

The South African economy continued to slow during the half-year under review. As consumer spending and fixed investment declined, and the process of destocking in commerce and industry got under way, the demand for credit weakened noticeably. While the import bill fell, gold revenue improved and the balance of payments staged an excellent turnaround. The resulting rise in the gold and foreign exchange reserves, combined with the weak demand for credit and capital, led to a sharp fall in interest rates.

As government finances were exerting a contractionary influence on the money supply, the economic downswing was well entrenched, and the balance of payments had improved substantially, the monetary authorities chose not to counteract the decline in interest rates. The move towards more market-related economic policies was advanced considerably by the abolition of exchange controls over non-residents. The financial markets coped well with the immediate transition, but are expected to be more volatile in future.

While 1983 will still be a difficult year for the economy with the drought accentuating the position, the preconditions for the next economic upswing are being put in place. The Nedbank Group, with its substantial capital surplus, is in a strong position to play its role in the next growth phase. Our assessment of the economy and trends in interest rates make us confident that the rate of growth of earnings reflected in this statement will be maintained in the second half of the financial year.

For and on behalf of the board
Dr. F. J. C. Cronje, Chairman
G. S. Muller, Chief Executive and Deputy Chairman

Dividend Announcement

An interim dividend in respect of the year ending 30 September, 1983 of 17.5 cents (1982-13 cents) per share has been declared payable to shareholders registered in the books of the company at the close of business on 6 May, 1983. The transfer books and register of members will be closed on 7 May, 1983 and will reopen on 16 May, 1983. Dividend cheques will be posted on or about 2 June, 1983. Non-resident shareholders' tax will be deducted where applicable.

D. A. Peterson
Secretary

The group is a registered company under the Companies Act, 1973 (Act No. 71 of 1973) and is a member of the South African Banks Association.

The company's activities are primarily in the banking and financial services sector, and it is a member of the South African Banks Association.

INTL. COMPANIES and FINANCE

Swraj Paul's recent share purchases have prompted takeover fears Indians resist expatriate predator

BY JOHN ELLIOTT IN LONDON AND K. K. SHARMA IN NEW DELHI

A MAJOR ROW has broken out in New Delhi over shareholdings bought in two prominent Indian companies by an Indian-born businessman resident in London.

The businessman, Mr Swraj Paul, is a close confidante of Mrs Indira Gandhi, the Indian Prime Minister. His investments are in line with the Indian government's industrial liberalisation policies, which include the encouragement of investments from Indians living abroad.

During the past three months, Mr Paul has acquired significant holdings in two important Delhi-based companies, Escorts and Delhi Cloth and General Mills. Existing family owners of the companies fear that Mr Paul's new holdings exceed the size of their own relatively small stakes of 5 per cent or so. They also fear that Mr Paul may use his influence to gain Government approval for taking the companies over.

Mr Pranab Mukherjee, the Indian Finance Minister, has said that the Government is closely watching the purchase of shares in Indian companies by expatriate Indians and would take appropriate action to safeguard the interests of the pre-

sent owners and managers.

Share prices of the two companies into which Mr Paul has bought have more than doubled because of his purchases, which have convulsed the Delhi stock exchange.

Indian industrialists have met the Finance Minister to voice their fears of takeovers by expatriates. The Minister is expected to make a statement to Parliament this week on the Government's attitude. It will be watched with considerable interest, since he will be pressed to define the attitude of the government-owned financial institutions which own large amounts of equity of the two companies and in many others that could face a similar situation.

The institutions have voting rights that could be crucial in any bid to topple the existing boards of the firms, but these would be used only on a direction from the Government, which has undertaken to ensure that management of well-run companies are not threatened.

Speaking in London over the weekend, Mr Paul denied that he enjoyed any special influence. "I do not mix politics and business and I have never gone to a politician with a

business proposition."

The Indian industrialists' reaction has, however, increased Mr Paul's interest in making use of his new shareholdings in two ways:

"First, I want to shake up the corporate setup in India where it seems that it is possible for chairmen who originate from business-owning families to continue to think of themselves as owners, even when they have thinned out their holdings to minor proportions."

"The government should make sure directors are responsible to all shareholders and should bring disclosure laws into line with Western international practice. And the companies should move away from a feudal style of management."

"That I want to do for the good of India. Secondly, the businessmen in me means that I would certainly like to have a management voice in the companies so that the managerial job is done better for the benefit of all the shareholders."

Mr Paul controls the Caparo group, an engineering, steel stockholding, industrial services and property conglomerate which has spent some £13m (\$20m) on recent acquisitions in the UK.

Caparo's only major Indian interest is a 74 per cent stake in three companies which own 16 tea estates in Assam.

But there are strong family ties with Mr Paul's old family company, his native Calcutta, Azeeljee Surrendra.

While Mr Paul insists there are no financial shareholding links between Caparo and Azeeljee, the family as a whole runs the companies and Mr Paul agrees he might involve his brothers who control Azeeljee in his new Indian acquisition.

His shareholdings in DCM, an old textile company which is diversifying widely into electronics and engineering, and in Escorts, a well known automotive and engineering company, stem from a new Indian law passed last year. This was aimed at attracting investments from Indians living abroad.

Mr Paul is a well-known figure in international Indian circles, not least because of his links with Mrs Gandhi—he played a prominent role in organising and funding last year's UK Festival of India. He says that, as a result, he was asked by leading figures in Delhi—not Mrs Gandhi—to make some token investments to act as a catalyst.

Deficit at Balco lower than expected

BY MARY FRINGS IN BAHRAIN

LOSSES at Balco, the Bahrain-Saudi aluminium marketing company, were not as heavy as the US\$80m forecast for 1982, despite a \$16.4m deficit in the first half.

The company ended the year to be \$25.5m in the red, after provisions for a potential loss on inventory valuation of \$7.6m, and interest on overdrafts to finance the stockpile of \$6.9m.

Over the previous five years, Balco achieved aggregate trading profits of some \$100m, although the restructuring of the company to accommodate a 26 per cent Saudi shareholding makes it difficult to calculate an exact figure.

The volume of sales increased

last year by 90 per cent over 1981, when Balco reported a net profit of \$6.2m, but revenue at \$189m was up only 40 per cent as a result of low prices.

The stockpile remained at much the same level throughout the year, with over 60,000 tonnes of uncommitted metal awaiting an upturn.

Mr Faisal Ali Mirza, general manager of Balco, is confident of a return to profitability in 1983, with metal prices up more than 30 per cent since the beginning of the year.

The Alba smelter is doubling its billet capacity to 60,000 tonnes a year, and there are modest prospects in the powder market.

Kuala Lumpur rejects UK firm's broking licence bid

BY WONG SUIKONG IN KUALA LUMPUR

AN ATTEMPT by Laurence Prust, the UK securities investment firm, to secure a broking licence to operate on the Kuala Lumpur Stock Exchange (KLSE) has been thwarted.

At an extraordinary meeting in Kuala Lumpur over the weekend, members of the stock exchange voted almost unani-

mously to bar foreign firms and individuals from becoming members of the exchange even if the foreign parties were coming in as minority partners.

The Laurence Prust move is seen as a test case as several broking houses from the UK, Singapore and Hong Kong, are believed to be keen in getting a seat on the KLSE.

EAC Malaysia sells HQ

BY OUR KUALA LUMPUR CORRESPONDENT

EAST ASIATIC Company of Malaysia, the subsidiary of EAC Denmark, is to sell a prime piece of property in Kuala Lumpur for 20.1m ringgit (U.S.\$8.2m), giving it a net

capital gain of 14m ringgit. The property, which currently houses EAC's Malaysian headquarters, is being sold to United Secretaries Sdn. Berhad, which intends to redevelop the land.

When you're trading with an increasingly important market, you need the finest bank to look after your interests on the spot.

And when the market is Turkey, that means Interbank: Turkey's leading wholesale bank.

Founded in 1888 as Banque de Salonique, we've specialized since then in import/export finance—now Turkey's fastest-developing economic sector.

Some 1982 examples: Interbank financed 20% of Turkey's oil imports from North Africa.

We recently handled the two largest LCs covering transit exports from the UK and West Germany through Turkey to the Middle East.

And we are one of two Turkish banks participating in the largest guarantee facility syndicate for Turkish contractors in Saudi Arabia.

We're strong. Growing fast. Highly profitable. And we work mainly with the top 100 companies and government agencies in Turkey.

Our outstanding financial results reflect our high-volume transactions and low overheads.

Interbank's internationally-qualified staff are always available by phone or telex, and are ready to travel at short notice.

When you're doing business with Turkey, Interbank is your natural and best possible banking partner.

Some key Interbank figures as of 31st Dec. 1982 (unaudited):
Total Deposits: TL 43,713,443,000
Total Assets: TL 65,959,007,000
Shareholders' Equity: TL 3,039,671,000
Share Capital increased to TL 1,000,000,000 (TL 2,242,000,000 paid up at March 31 1983)

This Prospectus includes information given in compliance with the Regulations of the Council of The Stock Exchange in London for the purpose of giving information with regard to the Stock to be issued by Her Majesty the Queen in right of New Zealand ("New Zealand"). New Zealand has taken all reasonable care to ensure that the facts stated herein are true and accurate in all material respects and that there are no other material facts the omission of which would make misleading any statement herein whether of fact or of opinion. New Zealand accepts responsibility accordingly.

Dated 26th April, 1983

New Zealand

Issue on a yield basis of

£100,000,000 Stock 2008

payable as to £30 per cent. on application
and as to the balance by 15th September, 1983
with interest payable half yearly on 4th May and 4th November

The Issue has been underwritten by
S. G. Warburg & Co. Ltd.

Baring Brothers & Co., Limited
Hambros Bank Limited
Kleinwort, Benson Limited
Morgan Grenfell & Co. Limited

County Bank Limited
Hill Samuel & Co. Limited
Lloyds Bank International Limited
Bank of New Zealand

Application has been made to the Council of The Stock Exchange in London for the £100,000,000 Stock 2008 (the "Stock") to be admitted to the Official List for dealing in the Gilt-edged market. Stock in registered form, when listed, will be an investment falling within Part II of the First Schedule to the Trustee Investments Act 1961 and an investment falling within Part III of the Schedule of the Building Societies (Authorised Investments) (No. 2) Order 1977. It is expected that dealings in the Stock on the Stock Exchange in London will begin on Friday, 29th April, 1983 for deferred settlement on Friday, 6th May, 1983.

Renounceable allotment letters (partly paid) in respect of the Stock will be despatched on Thursday, 5th May, 1983. Certificates in respect of Stock in registered form and bearer bonds in respect of Stock in bearer form will be available on 18th October, 1983 provided the balance of the moneys payable has been duly paid.

PROCEDURE FOR APPLICATION

All applications must be made in the form of the application forms provided and must be lodged with Lloyd's Bank Plc, Registrar's Department, Issue Section, 111 Old Broad Street, London EC2N 1AU (the "Registrar") not later than 10.00 a.m. (London time) on Thursday, 28th April, 1983 and must comply with the provisions of "Terms of Payment in Respect of Applications" below.

Applications for Stock must be for a minimum of £400 nominal amount of Stock and thereafter for the following multiples of Stock—

Amount of Stock applied for	Multiple
Up to £1,000	£ 100
£1,000 to £10,000	£ 1,000
£10,000 to £50,000	£ 5,000
£50,000 or greater	£25,000

S. G. Warburg & Co. Ltd. on behalf of New Zealand reserves the right to reject any application and to accept any application in part only. If any application is not accepted the relevant application form and the amount paid thereon will be returned by post at the risk of the person submitting the application and, if any application is accepted for a smaller amount of Stock than that applied for, the balance of the amount paid on application will be so returned, and in the meantime all such amounts will be held in a separate account.

S. G. Warburg & Co. Ltd. on behalf of New Zealand will announce the basis of allotment by 10.00 a.m. (London time) on Friday, 29th April, 1983. It is expected that confirmations of allotments will be despatched on that day.

THE APPLICATION LIST WILL OPEN AT 10.00 A.M. (LONDON TIME) ON THURSDAY, 28TH APRIL, 1983 AND CLOSE LATER ON THE SAME DAY.

TERMS OF PAYMENT IN RESPECT OF APPLICATIONS

Each application, unless made by a recognised Bank or Stockbroker taking advantage of the alternative method of payment described below, must be accompanied by a separate cheque in pounds sterling made payable to "Lloyd's Bank Plc" and crossed "New Zealand Loan" representing payment at the rate of £30 per cent. of the nominal amount of Stock applied for. Such cheques must be drawn on a branch in the United Kingdom or the Channel Islands of a bank which is either a member of the London or New Zealand Clearing House or which has arranged for its cheques to be cleared through the facilities provided for the members of those Clearing Houses.

An alternative method of payment is available in respect of payments of £10,000 or more only to recognised Banks or Stockbrokers (as defined under "General Information") who are members of the London or New Zealand Clearing Houses. Such payments may be made by means of a cheque drawn on the account designated "New Zealand Loan - Alternative Payment" by 10.00 a.m. (London time) on Wednesday, 4th May, 1983 at which time the Registrar will be open for the receipt of such cheques. The Registrar will be open for the receipt of such cheques from 10.00 a.m. to 3.00 p.m. on 15th September, 1983. Any amount payable in advance of its due date shall not bear interest or be entitled to any other payment.

S. G. Warburg & Co. Ltd. on behalf of the Underwriters referred to below, reserves the right to interest the Registrar to retain the relevant allotment letters and to apply application moneys (if any) pending clearance of applicants' remittances. Subject to the balance due on 15th September, 1983 may be made either by means of a cheque, drawn as aforesaid, received by Lloyd's Bank Plc not later than 3.00 p.m. on 15th September, 1983 or, for payments of £10,000 or more, by means of Town Clearing Funds (as defined above) to be received by Lloyd's Bank Plc not later than 3.00 p.m. on 15th September, 1983. Failure to pay the balance on any Stock when due will render all amounts previously paid liable to forfeiture and the allotment letters will be cancelled. Interest at the rate of two per cent. above the Base Rate for the time being of the nominal amount of the Stock in respect of which their applications shall have been accepted. The expression "Town Clearing Funds" shall mean cheques or remittances (payment for £10,000 or more drawn on a Town Clearing Branch of a bank in the City of London).

S. G. Warburg & Co. Ltd. on behalf of the Underwriters referred to below, reserves the right to interest the Registrar to retain the relevant allotment letters and to apply application moneys (if any) pending clearance of applicants' remittances. Subject to the balance due on 15th September, 1983 may be made either by means of a cheque, drawn as aforesaid, received by Lloyd's Bank Plc not later than 3.00 p.m. on 15th September, 1983 or, for payments of £10,000 or more, by means of Town Clearing Funds (as defined above) to be received by Lloyd's Bank Plc not later than 3.00 p.m. on 15th September, 1983. Failure to pay the balance on any Stock when due will render all amounts previously paid liable to forfeiture and the allotment letters will be cancelled. Interest at the rate of two per cent. above the Base Rate for the time being of the nominal amount of the Stock in respect of which their applications shall have been accepted. The expression "Town Clearing Funds" shall mean cheques or remittances (payment for £10,000 or more drawn on a Town Clearing Branch of a bank in the City of London).

Failure to pay the balance on any Stock when due will render all amounts previously paid liable to forfeiture and the allotment letters will be cancelled. Interest at the rate of two per cent. above the Base Rate for the time being of the nominal amount of the Stock in respect of which their applications shall have been accepted. The expression "Town Clearing Funds" shall mean cheques or remittances (payment for £10,000 or more drawn on a Town Clearing Branch of a bank in the City of London).

Each Stockholder who elects in the allotment letter to receive bearer bonds may receive them in one of the following ways—

(a) by post at the risk of the applicant. The allotment letter will include details of insurance arrangements; or

(b) by delivery to an existing account with Euro-clear or CREST S.A.; or

(c) by collection from the offices of the Registrar.

Stock certificates in respect of Stock in registered form will be despatched to the registered holders (in the case of joint holders to the first named) at their registered addresses on 18th October, 1983. After such date the relevant allotment letters will cease to be valid for any purpose.

No Stock certificates will be issued and no bearer bond will be delivered unless the Stock to be represented thereby is fully paid.

INFORMATION RELATING TO THE ISSUE

The Stock is created and the issue is made under the Public Finance Act 1977 (as amended) of New Zealand and S. G. Warburg & Co. Ltd. has been authorised to receive applications for the Stock. The Stock will be constituted by a Deed Poll and Stockholders will be deemed to have notice of and will be bound by its terms.

Stamps
The Stock will represent an unconditional, unsecured and general obligation of New Zealand. The principal of and interest on the Stock will be a charge on and payable out of the Public Revenues of New Zealand, equally and rateably with all other amounts so charged and payable in respect of all other general obligations of New Zealand for money borrowed.

Interest
The Stock will bear interest from 4th May, 1983 at a rate per annum to be determined in accordance with "Determination of Rate of Interest and Issue Price" below. Interest on the Stock will be payable (less, where applicable, United Kingdom income tax) by equal half yearly instalments on 4th May and 4th November in each year, except that the first payment of interest in respect of the period from 4th May, 1983 to 4th November, 1983 will be made on 4th November, 1983 and will be calculated using the following formula—

$$I = \frac{134}{365} \times \frac{30}{100} \times R \times \frac{50}{365} \times R$$

where I is the first payment of interest on £100 nominal amount of Stock, R is the percentage rate of interest attaching to the Stock, and P is the issue price.

Determination of Rate of Interest and Issue Price

The Stock will have attached such rate of interest and be issued at such price as will result in the Stock having a gross redemption yield determined on the basis described below at 13.5% per cent.

The Issue Yield shall mean the sum of 1.30 per cent. and the gross redemption yield, rounded to three places of decimals (with 0.0005 being rounded upwards), on 13.5 per cent. Treasury Stock 2004-08 at 3.00 p.m. (London time) on Wednesday, 27th April, 1983, the price of such Treasury Stock to be determined by S. G. Warburg & Co. Ltd. to be the arithmetic mean of the bid and offered prices quoted on a clearing basis for settlement on the following business day by three jobbers in the Gilt-edged market. The gross redemption yield will be expressed as a percentage and will be calculated on the basis indicated by the Joint Index and Classification Committee of the Institute and Faculty of Actuaries as reported in the *Journal of the Institute of Actuaries* Vol. 165, Part 1, 1979, page 18.

The rate of interest attaching to the Stock will be determined by S. G. Warburg & Co. Ltd. and will be an integral multiple of one quarter of one per cent. and will be as high as possible consistent with an issue price as near as possible to, but not less than, 92% per cent. The issue price will also be determined by S. G. Warburg & Co. Ltd. and will be expressed as a percentage rounded to three places of decimals (with 0.0005 rounded upwards).

It is intended that notice of the Issue Yield, rate of interest and issue price will be published in the *Financial Times* on Thursday, 28th April, 1983.

(a) The Stock, if not previously cancelled after purchase, will be repaid at par on 4th May, 2008.

(b) New Zealand will irrevocably authorise and direct S. G. Warburg & Co. Ltd. or its successor as purchase agent, (the "Purchase Agent") to underwrite to purchase for the account of and at the expense of New Zealand £100,000,000 nominal amount of the Stock during the period from 15th September, 1983 to 3rd May, 1984 and during each of the four 12 month periods beginning on 4th May in the years 1984 to 1987. In each case purchases will be made at such prices not exceeding the issue price (exclusive of accrued interest and all costs of purchase) as the Purchase Agent may at its sole discretion consider appropriate in order to purchase Stock in such amount during each such period. If during any such period the Purchase Agent is unable to purchase the relevant nominal amount of Stock, the Purchase Agent will be irrevocably authorised and directed to purchase for the account of New Zealand during the six months next following the expiry of that period, on the conditions set forth above and before purchasing any Stock which it shall be authorised to purchase during the next following 12 month period, Stock of an aggregate nominal amount equal to the shortfall in the nominal amount of Stock purchased during that earlier period, provided that any such shortfall shall in no circumstances be carried forward beyond the six months next following the expiry of that period. The purchases may be made by the Purchase Agent on the Stock Exchange or otherwise, from such persons and at such times as the Purchase Agent in its sole discretion may determine. In acting under the foregoing provisions, the Purchase Agent shall not assume any obligation to Stockholders.

(c) New Zealand may at any time purchase Stock in the open market at any price or by private treaty at a price not exceeding ten per cent. above the middle market quotation for the Stock, as shown by The Stock Exchange Daily Official List, ruling on the previous day (allowing for accrued interest but exclusive of all costs of purchase) but not otherwise.

(d) Stock purchased shall be cancelled forthwith.

Registration, Transfer and Exchange
Lloyd's Bank Plc has been appointed Registrar of the Stock, which will be transferable in registered form in multiples of one penny by instrument in writing in the same manner as if the Stock were a security to which Section 1 of the Stock Transfer Act 1963 applied. The Stock represented by bearer bonds will be transferable by delivery. Under present legislation the Stock is transferable free from United Kingdom stamp duty.

Applications for exchange of Stock in registered form for bearer bonds and vice versa should be made on the forms of exchange available at the offices of Lloyd's Bank Plc, Registrar's Department, Goring-by-Sea, Worthing, West Sussex BN12 6DA and 111 Old Broad Street, London EC2N 1AU (the Registrar's Department) or by post to Lloyd's Bank Plc, Registrar's Department, 111 Old Broad Street, London EC2N 1AU, for credit to the account designated "New Zealand Loan - Alternative Payment" by 10.00 a.m. (London time) on Wednesday, 4th May, 1983 at which time the Registrar will be open for the receipt of such cheques. The Registrar will be open for the receipt of such cheques from 10.00 a.m. to 3.00 p.m. on 15th September, 1983. Any amount payable in advance of its due date shall not bear interest or be entitled to any other payment.

Failure to pay the balance on any Stock when due will render all amounts previously paid liable to forfeiture and the allotment letters will be cancelled. Interest at the rate of two per cent. above the Base Rate for the time being of the nominal amount of the Stock in respect of which their applications shall have been accepted. The expression "Town Clearing Funds" shall mean cheques or remittances (payment for £10,000 or more drawn on a Town Clearing Branch of a bank in the City of London).

Each Stockholder who elects in the allotment letter to receive bearer bonds may receive them in one of the following ways—

(a) by post at the risk of the applicant. The allotment letter will include details of insurance arrangements; or

(b) by delivery to an existing account with Euro-clear or CREST S.A.; or

(c) by collection from the offices of the Registrar.

Stock certificates in respect of Stock in registered form will be despatched to the registered holders (in the case of joint holders to the first named) at their registered addresses on 18th October, 1983. After such date the relevant allotment letters will cease to be valid for any purpose.

No Stock certificates will be issued and no bearer bond will be delivered unless the Stock to be represented thereby is fully paid.

Stamps
The Stock will represent an unconditional, unsecured and general obligation of New Zealand. The principal of and interest on the Stock will be a charge on and payable out of the Public Revenues of New Zealand, equally and rateably with all other amounts so charged and payable in respect of all other general obligations of New Zealand for money borrowed.

Interest
The Stock will bear interest from 4th May, 1983 at a rate per annum to be determined in accordance with "Determination of Rate of Interest and Issue Price" below. Interest on the Stock will be payable (less, where applicable, United Kingdom income tax) by equal half yearly instalments on 4th May and 4th November in each year, except that the first payment of interest in respect of the period from 4th May, 1983 to 4th November, 1983 will be made on 4th November, 1983 and will be calculated using the following formula—

$$I = \frac{134}{365} \times \frac{30}{100} \times R \times \frac{50}{365} \times R$$

where I is the first payment of interest on £100 nominal amount of Stock, R is the percentage rate of interest attaching to the Stock, and P is the issue price.

Determination of Rate of Interest and Issue Price
The Stock will have attached such rate of interest and be issued at such price as will result in the Stock having a gross redemption yield determined on the basis described below at 13.5% per cent.

The Issue Yield shall mean the sum of 1.30 per cent. and the gross redemption yield, rounded to three places of decimals (with 0.0005 being rounded upwards), on 13.5 per cent. Treasury Stock 2004-08 at 3.00 p.m. (London time) on Wednesday, 27th April, 1983, the price of such Treasury Stock to be determined by S. G. Warburg & Co. Ltd. to be the arithmetic mean of the bid and offered prices quoted on a clearing basis for settlement on the following business day by three jobbers in the Gilt-edged market. The gross redemption yield will be expressed as a percentage and will be calculated on the basis indicated by the Joint Index and Classification Committee of the Institute and Faculty of Actuaries as reported in the *Journal of the Institute of Actuaries* Vol. 165, Part 1, 1979, page 18.

The rate of interest attaching to the Stock will be determined by S. G. Warburg & Co. Ltd. and will be an integral multiple of one quarter of one per cent. and will be as high as possible consistent with an issue price as near as possible to, but not less than, 92% per cent. The issue price will also be determined by S. G. Warburg & Co. Ltd. and will be expressed as a percentage rounded to three places of decimals (with 0.0005 rounded upwards).

GENERAL INFORMATION

Underwriting Arrangements

By an Underwriting Agreement dated 25th April, 1983, S. G. Warburg & Co. Ltd., Baring Brothers & Co. Limited, County Bank Limited, Hambros Bank Limited, Hill Samuel & Co. Limited, Kleinwort, Benson Limited, Lloyd's Bank International Limited, Morgan Grenfell & Co. Limited and Bank of New Zealand (the "Underwriters") have agreed with New Zealand to underwrite the issue of the Stock. The Underwriting Agreement is subject to certain conditions and S. G. Warburg & Co. Ltd., on behalf of the Underwriters, may terminate the Underwriting Agreement if such conditions are not fulfilled. If the Underwriting Agreement is so terminated, acceptances of applications for the Stock will become void.

New Zealand has agreed to pay to the Underwriters commissions aggregating £1.25 per £100 of Stock for their services as managers and underwriters of the issue out of which will be paid commissions to the brokers to the issue (Springer, Kemp-Gee & Co. and Rowe & Pim) and certain other persons who have agreed to accept sub-underwriting participation in respect of the issue of the Stock. New Zealand will pay brokerage of 12 1/2 p per £100 of Stock to recognised Banks or Stockbrokers on allotments made in respect of applications bearing their stamp; this commission will not, however, be paid in respect of any allotment which arises out of a sub-underwriting commitment. The expression "recognised Bank or Stockbroker" shall mean any organisation which is a recognised bank for the purposes of the Banking Act 1979 and any firm of stockbrokers which is a member of The Stock Exchange in London and such other banks and brokers as S. G. Warburg & Co. Ltd. shall at their absolute discretion agree for the purpose of the issue. The total expenses of the issue (including the above-mentioned commissions but excluding brokerage) are estimated to amount to £1,350,000 and are payable by New Zealand.

Documents for Inspection

Copies of the following documents will be available for inspection at the offices of Allen & Dwyer, 9 Chancery Lane, London EC2V 8AD during normal business hours until 10th May, 1983—

- (i) the Underwriting Agreement referred to above;
- (ii) a draft, subject to modification, of the Deed Poll referred to above, which includes in schedules thereto the form of certificate and bearer bond;
- (iii) draft/s, subject to modification, of the Registrar's, Paying and Exchange Agency Agreement and of the Purchase Agency Agreement; and
- (iv) the Public Finance Act 1977 (as amended) of New Zealand, together with the warrant pursuant to Section 79 of such Act, appointing the Loan Agents of New Zealand in relation to the issue of the Stock.

UK COMPANY NEWS

Simon Engineering marginal rise

A GOOD performance by its process plant contracting side and an increase in interest receivable helped Simon Engineering to a marginal rise in pre-tax profits from £20.33m to £20.66m for 1982.

This continued the pattern of the first half for at mid-year this group—other interests of which include specialised machinery manufacture, storage and oil services—reported a result of £7.6m against £7.44m. The directors said then that full year figures would bear comparison with 1981 and they now say they are looking for a reasonable outcome to the current 12 months.

For the period under review, earnings per 25p share are shown at 51.1p (53.6p) pre-tax extraordinary items and 35p (51.5p) after. On these the final dividend is 9.25p net for a 13.25p 13.8p total.

The £4.97m (£560,000) of extraordinary charges represent the costs of rationalisation and cessation of drilling muds activities in the U.S.

Group turnover, at £362.57m, showed an increase of £22.8m but trading profits fell by £1.48m to £13.98m, after depreciation of £1.18m (£5.77m) and before a £1.18m (£1.14m) share of associates.

Interest receivable jumped from £3.92m to £5.2m and a breakdown of turnover and the rest of pre-tax profits shows (000s omitted): food engineering £72,888 (£68,113) and £316 (£1,386); manufacturing £59,168 (£51,008) and £3,636 (£3,364); process plant contracting £130,487 (£112,329) and £5,208 (£4,091); merchanting and storage £82,374 (£87,282) and £1,381 (£5,553); oil services £17,046 (£21,043) and £376 (£1,983).

Tax took £6.47m (£5.14m) and there were minority profits of £949,000 (£1.28m) which left the attributable balance at £2.38m (£1.35m). Dividends, including £30,000 of preference payments, cost £3.49m (£3.32m) and £4.89m (£10,000) was retained. On a CCA basis the taxable result is given at £14.41m (£14.28m).

Commenting on the year, Mr. E. Harrison, chairman, says trading conditions were difficult for

HIGHLIGHTS

Lex today looks at the reported attempt by Fitch Lovell to sell its Key Markets subsidiary to Safeway for £35m, in the context of the Linford bid for Fitch, currently before the Mergers and Monopolies Commission. The column goes on to discuss the first revaluation by Hammerson Property which puts net assets at £9.77 a share. It also considers the acquisition of Seafirst Corporation, a holding company and one of the largest Washington state banks, by BankAmerica Corporation in a deal worth \$247m and the implications for U.S. bank regulations. Further Lex discusses figures from Ford Motor Company of the UK.

all the group's companies, and low levels of world demand intensified the squeeze on margins from international competitors, all with surplus capacity to fill.

In the circumstances it was inevitable that some of the group's units were unable to repeat their profits performance of 1981, he states. In particular, the continuing decline in investment in processing machinery put the food division under severe pressures. Thus its small increase in turnover was at the cost of much slimmer margins.

The oil services group, with its principal markets in the U.S., felt the immediate impact of the sharp decline in the levels of service and drilling activity in that country.

With the benefit of a diverse operating base, the manufacturing division held its turnover reasonably well, but again on tighter margins. Meanwhile, the merchanting and storage group, though affected in both revenue and margin terms by the general recession in the oil and chemical industries, benefited from the considerable investment in storage that the company has made in recent years to expand facilities.

Some companies within the process plant contracting side of the group's business had a difficult year but others did well and brought to profitable completion a number of long-term contracts. With a first-time inclusion of profits from Koger & Boxill and Simon-Carves (Africa) as full subsidiaries, Mr

Harrison describes this division's contribution as good.

Overall, the group's wide spread of interests has again helped it to produce a reasonable result in another year of deep recession, he states.

Profits, an improvement in cash and deposits from £43.4m to £52.2m and the strength of the group's balance sheet, which saw shareholders' funds rise from £38.5m to £39.8m, put Simon in a strong position to take advantage of any upturn in demand, and also of suitable opportunities for growth by acquisition, says Mr Harrison.

The recovery from recession is difficult to forecast, he states, but there do appear to be more consistent signs that the world economy, led by the U.S., is on the upturn.

He is not predicting or expecting a return to rapid growth and says it will, in any case, take time for an improvement to have a sizeable impact on companies supplying capital goods.

Nonetheless, the outlook appears to be encouraging, he says, although an increase in world investment and trade now would be of more benefit to 1984 results than to those for the current year.

Comment

Simon Engineering has weathered the recession well and has just managed to sustain its ten-year growth record, raising profits by a modest £334,000 in 1982. High interest income, up from £3.7m to £5.5m, is the reward for Simon's policy of husbanding cash in difficult times and compensates for a

drop in trading profits. Heavy cost-cutting and reshaping of Simon's businesses resulted in the extraordinary loss of £4.97m. Over half was incurred in the U.S., mainly from the closure of its drilling mud operations, a victim of the slowdown in oil production. After oil services, food engineering was the hardest hit of Simon's businesses; margins were slashed to that on a small increase in turnover profits dropped from £1.38m to £316,000. But with the bad news out of the way, the company is cautiously optimistic, encouraged by "staves in the wind" including the \$60m Nigerian contract and the almost clinched \$400m deal for a chemical complex in Indonesia. Profits from new business will not come through to the bottom line until 1984-85, but Simon's work load should build up in 1983. Simon hopes to spend some of its £52m cash pile this year in oil services and other areas including process plant contracting, if and when the opportunities arise. The share price lost 7p to 424p where it sits on 11.4 years earnings and a yield of 4.5 per cent.

Further loss at Blackwood Hodge (Canada)

For the first quarter of 1983, Blackwood Hodge (Canada) showed an increased pre-tax loss of £32.53m against £31.75m. Turnover fell from £23.93m to £15.12m and there was a deficit before interest of £1.12m compared with a profit of \$374,000. There was a credit of £1.21m (£380,000) and the loss per share is stated at 54 (35) cents.

The directors say that demand for heavy construction equipment continued downward throughout the quarter.

However, the deep recession the company has been experiencing in its industry over the past two years appears now to be close to bottoming-out. An upturn in demand for the company's products would show improvement in sales for the balance of the year.

Placing to raise £9m by Reed Stenhouse

Reed Stenhouse Companies, the Canadian arm of Stenhouse Holdings, has agreed to sell 1.1m "A" shares, through a private placing with institutional investors, for an amount of some £9.12m (£8.92m).

The proceeds will be used for acquisitions, or, in the interim, to reduce borrowings and increase debt capacity. As part of its continuing strategy, the company is actively exploring potential acquisition candidates.

Stenhouse Holdings owns the equivalent of 9.32m "A" shares in Reed Stenhouse. Although the placing will not affect this holding, it will reduce the proportion of Reed Stenhouse share capital held by Stenhouse from 52.4 per cent to 49 per cent.

Stenhouse's voting power has always been restricted to a maximum of 50 per cent and following the placing it will have 49 per cent of votes. Dividends will continue to be paid by Reed Stenhouse to Stenhouse Holdings in the same manner as before.

The board of Stenhouse Holdings is satisfied that the transaction is in the best interests of shareholders in both Reed Stenhouse and Stenhouse.

Closing is anticipated to take place shortly after receipt of the necessary regulatory approvals expected within ten days. The company's agent in the transaction was Wood Gundy.

Irish Distillers

Of the 11,508,595 ordinary shares in Irish Distillers Group offered by way of rights, 91.6 per cent have been taken up.

The balance of the shares not taken up has been sold in the market in accordance with the terms of the issue. Underwriters have been relieved of their liabilities.

Hammerson profits climb and portfolio worth £912m

BY MICHAEL CASSELL

Hammerson Property Investment and Development Corporation has reported another big increase in pre-tax profits and unveiled the results of the group's first full revaluation of its international property portfolio.

Hammerson, which has extensive property interests in the UK, North America and Australia, notched up pre-tax profits of £20.4m in the year ended December 31, 1982 against £15.05m in the previous 12 months. In two years, the group has virtually doubled its pre-tax figures.

The long-awaited and reluctantly announced valuation, made by directors but using outside advisers in the case of some properties, gave the group's portfolio a year-end value of £911.9m. Investment properties are 12m 1981 balance sheet at £242m.

After the subsequent issue of shares to the Australian Mutual Provident Society, in exchange for minority interests held by AMP in Hammerson's Australian properties, the revaluation throws up a net asset value per share of £9.77. Analysts forecasts in advance of the results had suggested an NAV of anything between £9 and around £11.

The results pushed up Hammerson "A" shares by 35p to

Dividends shown pence per share net except where otherwise stated. * Equivalent after allowing for scrip issue. † On capital increased by rights and/or acquisition issues. ‡ US\$ stock.

725p on the day, giving the group a market capitalisation of £497m and putting it ahead of M&P (£470m). The remainder of the property sector also felt the benefit, with several companies recording useful gains.

The final dividend is 10p (net) making 13p against 11p last time. Earnings per share, adjusted to take account of the April 1982 rights issue, were 21.10p (15.6p) or 20.32p (15.6p) fully diluted. The 1982 results reflect another good year for reviews and revaluations, with some help from the general weakness of sterling. The group portfolio is

thought to have the highest overseas content of any major UK property company, with about half its portfolio located abroad. Conditions in Hammerson's two principle overseas markets—Australia and Canada—have weakened since the start of 1983. An early quotation in Australia began to look less lively while development of the 18th phase of the very successful Bow Valley Square scheme in Calgary—possession of the relevant site is not due until 1984—is expected to wait signs of an improvement in the local market. See Lex

Bodycote lower: dividend cut 1p

PRE-TAX profits of Bodycote International, with interests in industrial clothing, safety products, textiles and engineering, declined from £37,000 to £21,000 for 1982 with an improvement by the UK side failing to offset a sharp downturn by the overseas companies.

The dividend for the year is being cut by 1p to 3p net per 25p share, the final being a same-again 2p—earnings per share dropped from 9.25p to 6.45p.

Mr J. C. Dwek, the chairman, said there was not sign of some improvement in UK trading conditions.

He adds that although the full benefit of new acquisitions for the metal treatment division will not be felt until the end of the year "their significance is that they mark the directors' readiness to move forward again positive after a period of contraction."

The directors are hopeful that by year-end the group will again be back on an acceptable growth line.

Group turnover for 1982 was little changed at £26.25m (£26.38m). A geographical breakdown of profits before tax, which

were also affected by a rise in interest charges from £241,000 to £380,000, shows the UK £1.1m (£365,000) and overseas £194,000 (£263,000).

Tax took £296,000 (£196,000) and minorities accounted for £5,000 (£9,000).

Attributable profits emerged at £511,000 (£712,000) pre-tax extraordinary items—these were losses attributable to the cessation of trading at Wm. Denby £174,000 (£500,000) and other losses and provisions regarding rationalisation and cessation of trading £341,000 (£208,000).

Overseas profits were affected by a rapid decline in the economies of the Netherlands and W. Germany.

In the industrial protective clothing and safety products division, a programme of rationalisation is being implemented in order to reduce the group's exposure and improve the return on capital employed.

Although no substantial benefits are expected before 1984, restructuring and marketing plans are under way.

comment

Bodycote's 11 per cent decline in pre-tax profits was chiefly due to

the damage rising unemployment inflicted on its Continental industrial clothing markets and the doubled interest bill which resulted from the costs of reducing its exposure to that situation. The closure of two factories in West Germany and the Netherlands is all part of the group's continuing move away from vulnerable territories into the higher returns of metal finishing, where it has made two acquisitions in the current year. Borrowings should ease as Bodycote sells surplus property and substantial stocks which have been hanging around waiting for prices to pick up. The company says it will hold on to its remaining textile division, accounting for around 50 per cent of total profits, compared with 40 per cent for metal treatment. Order books have improved across the division in the current year, pointing to pre-tax profits of perhaps £1.1m. However, it seems unlikely that the dividend will be restored to its former level in 1983 as the costly process of reorganisation is not yet over. The shares ended up 1p at 54p, where they stand on a fully taxed prospective p/e of 7.3 and yield 8.3 per cent.

Edmond placing and rights

Edmond Holdings, formerly Allied Residential, has applied to the council of the Stock Exchange for a placing of 15,004,000 shares of 10p each at 10p. The largest is a development of 100 houses at Stoneferry, Hull, planned for completion in June 1984. It is purchased from "Tadpole Investments" a portfolio of residential properties in Middlesbrough and Stockton on Tees valued at £2,78m and with an income of £283,522. The balance of the profits forecast will come from housebuilding and disposals.

Net tangible assets of the restructured group will be £5.03m compared with £1.02m at December 31, 1982. The directors forecast a pre-tax profit of £275,000 in the year to December 31, 1983. On a nil tax charge they estimate net earnings per share at 1.44p and

a net dividend per share of 1p giving a p/e of 9.74 and a dividend yield of 10.13.

The company is currently engaged in eight building projects. The largest is a development of 100 houses at Stoneferry, Hull, planned for completion in June 1984. It is purchased from "Tadpole Investments" a portfolio of residential properties in Middlesbrough and Stockton on Tees valued at £2,78m and with an income of £283,522. The balance of the profits forecast will come from housebuilding and disposals.

Wingate ahead by £81,000

In its first figures since getting a quote on the Unlisted Securities Market last October, Wingate Property Investments reports a pre-tax surplus of £824,000 for 1982, an increase of £81,000 over 1981.

No dividend for the year is being paid. Gross rents receivable totalled £1.65m compared with £2.2m in 1981. Tax was slightly lower at £27,000 against £31,000. After minorities of £2,000 (nil) and extraordinary debits of £27,000 (£8,000 credit), the attributable surplus was £824,000 (£344,000), which included a transfer from capital reserve of £7,000.

Stated earnings per share advanced from £2.71p to 3.39p.

Hoskins & Horton ahead

BIRMINGHAM-BASED building and hospital equipment group Hoskins & Horton finished 1982 with pre-tax profits £73,000 ahead at £254,000, and is raising its total dividend from 5p to 6p with a final payment of 4p net.

At halfway, when profits were up from £22,000 to £71,000, the directors said they expected profitable trading in the second six months. They now say that results so far in the current year

support confidence. Turnover for the period under review advanced from £9.4m to £10.0m, while profits were after interest of £11,000 (£13,000) and subject to tax of £71,000 (£15,000). Earnings per 20p share rose to 17p (16.4p) and there were extraordinary profits this time of £38,000 (£19,000).

The directors say that the current year has so far shown some increase in orders

McKechnie Brothers

The steady improvement in our results derives from a significantly better performance in the U.K. due to our policy of continued investment in new plant and an increasing awareness of the importance of productivity amongst our employees. As expected, the going has been tougher overseas but we may have seen the end of destocking. The merger of Denver Metals with certain of our South African manufacturing interests has given us a stronger base for long term growth. In our Annual Report I expressed the hope that the Group would continue to make progress. Currently I believe the trend to improved profitability in the U.K. should continue and that it will offset some further decline in our income from overseas. Our overall prospects therefore remain unchanged.

Dr. J. M. Butler, Chairman

Interim Results—unaudited

BIDS AND DEALS

House of Fraser defeat on Lonrho's use of emblem

House of Fraser yesterday failed to stop Lonrho from using the group's emblem on proxy cards and circulars as part of Lonrho's campaign to force a separation of Harrods from the Fraser empire.

Four Lonrho directors, Lord Duncan, Mr. Rowland, Mr. Terry Robinson and Mr. Paul Spicer, said that House of Fraser "failed in its application to the court of session in Edinburgh" in which it sought to prohibit the four men from using the Harrods emblem in the proxy cards and circulars sent out with their circular of April 18 and from issuing any further proxies in that form.

The four added: "The proxies sent to shareholders in a form approved by the Stock Exchange and the court held that they were not misleading. Costs were awarded against House of Fraser."

House of Fraser has been angered by Lonrho writing to its shareholders about the merger of Harrods, which Lonrho is attempting to force, through the two Lonrho representatives on the Fraser board, Lord Duncan-Sandys and Mr. Rowland. They have been writing to shareholders to say that the group's future plan is to merge the two Harrods stores into a single entity.

In other court moves yesterday, Lonrho gained an injunction against House of Fraser preventing the stores group bringing forward a board meeting and the declaration of the group's annual results. House of Fraser said that it intended to declare its results and hold the board meeting today instead of Thursday as originally planned.

But the court ruled that the meeting should take place on the day originally planned.

Professor Smith, House of Fraser's chairman, launched an attack on Lonrho's arguments about Fraser's future. He said that House of Fraser's new marketing strategy was aimed at the 15-25 age group.

Pleasurama bid may run into monopoly objection

Pleasurama and Grand Metropolitan are expected to rearrange their joint casino interests in an attempt to avoid Pleasurama's £50m agreed bid for Trident Television running into monopoly objections.

Pleasurama and Grand Met own 25 and 75 per cent respectively of two London casinos, the Ritz and the Casanova Club. Grand Met also holds nearly 30 per cent of Pleasurama's share capital.

While Grand Met is not directly involved in the Pleasurama bid for Trident, it is Grand Met which is most concerned about the monopoly implications of the offer, according to Pleasurama.

A merger between Pleasurama and Trident would create a group with five casinos in London and 17 in the provinces. Grand Met's Mecca gaming arm has six clubs in London.

Grand Met is apparently concerned that the share holdings and joint casino interests would be seen as a breach of the Office of Fair Trading, and in turn the Monopolies and Mergers Commission, that it had too large a position in the market.

Pleasurama said yesterday any solution could not be allowed to reduce its profits from casino operations, its 35 per cent stake in the Ritz and the Casanova contributed no less than £2.5m of its £9.5m pre-tax profits last year.

One idea that the two companies have been considering since serious talks began last Friday is a transfer of their interests in the two jointly-owned clubs. Pleasurama could take full control of the Casanova, while transferring its quarter stake to the much larger Ritz to Grand Met.

A straightforward cash sale of any of its interests is believed to have been ruled out by

Increased holding in Sotheby's

The two American businessmen who have bid £51m for Sotheby's, the fine art auctioneers, yesterday made further significant purchases of the company shares.

Mr. Stephen Swid and Mr. Marshall Cogan obtained a ruling last Thursday allowing them to resume purchasing Sotheby's shares.

It had been expected that U.S. securities legislation—the Hart-Scott-Rodino Anti-trust Improvements Act—would prevent them buying more shares until today at the earliest.

Substantial purchases were made yesterday pushing the Sotheby share price up 13p to 533p—3p above the offer price. Details of the numbers of shares bought will be announced later today.

The two American businessmen, who are making their offer through a newly-created subsidiary of their carpet underlay and furniture manufacturing companies, General Felt Industries/Knoll International, previously held 13.9 per cent of Sotheby's.

Sotheby's is expected to publish its defence document later today in which it will explain to shareholders its reasons for rejecting the Americans' bid.

The merger panel of the Office of Fair Trading will also probably consider the take-over offer at a routine meeting today on the grounds that it involves assets of more than £15m.

Metal Box S. Africa in talks with Nampac

BY DAVID DODWELL

Metal Box South Africa is reviewing its operations and is considering co-operation or merger with Nampac, the country's largest packaging company.

Nampac is 49 per cent-owned by Barlow Rand, the South African mining and industrial giant.

The company's UK parent, which has a 51.3 per cent stake in Metal Box South Africa, said in London yesterday that the review—being conducted jointly by Metal Box, Nampac and Barlow Rand—was intended to "explore whether advantages would be gained from co-operation between, or integration of some or all of the operations and activities" of its South African subsidiary.

A spokesman later clarified: "We are looking into the possibility of developing common interests. The review does not result from current trading or financial positions."

He emphasised that the review was "at an early stage," and that time was needed "to examine the possibilities which are open to the parties involved."

Metal Box South Africa is Metal Box's single largest overseas operation—last year accounting for over 40 per cent of overseas sales, and over a third of profits.

Market rumours of a possible takeover of Metal Box South Africa by Nampac have been strong in South Africa for some time. But an analyst in Johannesburg yesterday cast doubt on these rumours. Substantial investments in new packaging plant are expected to begin paying dividends in 1984.

Belair shares suspended

Belair Cosmetics yesterday called for suspension of stock market dealing in its shares pending an announcement.

The suspension—with the share price at 78p—comes a week after disclosure by the Fenton Hill Group, a retail shop operator and confectionery and toiletries manufacturer which has a 78 per cent stake in Belair, that talks were being held which may lead to the sale of its controlling interest.

At that time, the directors of Fenton and Belair said they

145 companies wound up

COMPULSORY winding up orders against 145 companies were made by Mr. Justice Harman in the High Court.

Among the companies were: Tony's Taxi Service, Gleamfame, Creassey of Hertford, William Roster and Company, J. D. Metalstock, OMC, Tarses Properties, Gardine, Club Tours (Malta).

SUN ALLIANCE INSURANCE GROUP

Comments by the Chairman - Lord Aldington

The world insurance markets were in a bad way in 1982, very much as we had warned; and Sun Alliance's underwriting losses rose sharply, as happened in other insurance companies. Despite those losses there was a healthy gain to your Company's financial strength based on the market value of its assets, and our solvency margin at the end of the year was 112%. You have my assurance that this strong asset position does not reduce in any way our resolve to underwrite responsibly. Indeed, a proper return on your assets can be achieved only if we do so.

For a long time now we have had our expenses under close control and we completed a further reorganisation in 1982; throughout we have maintained a prudent underwriting policy. But the major problem we face is the market climate in which underwriters are quoting too low rates and paying insufficient attention to changes in risks and in the amount of compensation being awarded in courts of law. I hope that those who say they detect signs of improvement in these matters are correct. As conditions improve you may be sure that we shall seize every opportunity for expansion allowed by our high solvency margin.

Underwriting experience in 1982 deteriorated for two principal reasons: competition in nearly all the world's insurance markets became more intense and continuing economic recession reduced world trade and therefore the amount of insurance business.

The exceptionally severe weather in the early months of the year gave rise to claims on the Group of £23.5m in the United Kingdom alone. Net of reinsurance, the cost was £15.5m and our own underwriting loss for the year increased to £70.9m compared with £36.8m in 1981.

Mainly because our investment income grew by £19m our profit before tax was not reduced so much—£56.8m against £70.9m.

It is fair to say that the investment experience of insurers during 1982 has been exceptionally profitable. The effect of falling, but still high real, interest rates and strongly rising fixed interest and equity values in the world's principal markets may seem to justify those who are prepared to accept underwriting losses and rely upon investment returns outweighing them.

The position has been reached, however, in many markets and classes of insurance where investment income is already more than offset by the underwriting losses generated by the business and reliance upon stock markets to maintain the solvency and indeed viability of insurers has its obvious dangers.

I have previously stressed in these Statements that Sun Alliance believe that underwriting profit is necessary for the long term health and stability of the industry and that we aim and strive to achieve it. The impossibility of doing so in present conditions remains a matter of concern to me which is not lessened by the knowledge that many very reputable insurers are faring worse than the Sun Alliance.

Operations

In the United Kingdom heavy fire losses, poor liability and private motor results, a much increased loss in the Republic of Ireland and weather losses all helped to turn our traditionally profitable home business into sizeable loss. The outcome was, however, better than we might have expected from the results for the first six months.

The serious loss in Canada was disappointing and our United States underwriting loss was doubled by the need to increase reserves against long outstanding medical malpractice claims as we reported last September.

Continuing remedial action bore fruit in a number of overseas countries. However, Australian losses, whilst staunch, are still unacceptably high.

Reinsurance business produced intolerable results. Much has been discontinued but because of the long-tail nature of the account further serious losses will continue for some time.

The deficit on our Marine operations was attributable to the results of our overseas subsidiaries for 1982. Although our main Marine and Aviation account for 1980 closed in 1982 with a loss, this had already been covered by existing reserves.

After a slow start, life new business picked up as the year progressed and continues to be buoyant. The annual valuation produced an increased transfer to profit and loss account.

Lack of growth and the loss experience restricted cash flow in the general funds. Investment income none the less rose by some 19%, or 14% after eliminating the effect of exchange movements.

The financial strength of the Group was further reinforced during 1982 by the marked rise in fixed interest and equity stock markets. After bringing into account an increase of £32m resulting from the revaluation of properties, unrealised appreciation and exchange adjustments amounted to almost £200m. Together with retained profits and realised investment gains, the shareholders' funds rose from £646m to £883m.

In the long run we must not drift into reliance upon investment operations for our annual profit but the Group's prosperity will always depend heavily upon them. We are fortunate in being particularly well served in this field.

Dividend

The directors have resolved to declare a total dividend of 48p per share which compares with 43p paid for 1981—an increase of 11.6%. An interim dividend of 19.5p was paid in January and the final dividend of 28.5p will be paid on 5th July next.

You will know from my earlier Statements that your Board has always been anxious to see that the dividend should at least keep abreast of inflation and whenever possible and justifiable move towards restoring more of its former purchasing power.

Outlook

The immediate outlook is difficult to discern. The industry's trading prospects in so many of our markets continue to be most unsatisfactory or poor and fundamental improvement is certainly necessary. Iis, however, often ultimately produce remedies and a few signs are appearing that more sensible and responsible views are prevailing in falling rates of inflation and in reinsurance markets.

We can with justification hope that some of the exceptional losses that we suffered last year will not be repeated in 1983 and that the hard work that is going on all over the Group will be properly rewarded.

I stated last year that the continuing deterioration in the reinsurance market was a matter of great concern, not only to us but to the entire insurance community. I added "increasingly the credibility of a growing part of the excessive reinsurance capacity is being questioned." Even though there is evidence of some corrective action by reinsurers, little has happened in the past twelve months to lessen our concern and we hope that many lessons are being learned. Insurance depends both on expertise and enterprise, and the maintenance of the highest standards of integrity in reinsurance no less than primary insurance. Concern has been expressed that practices recently exposed and doubts about reinsurance voiced by many, form, as it were, the tip of a very large iceberg. That would not be correct. In all but small sections of the market standards are being fully maintained and expertise and enterprise certainly sharpened.

Summary of Results — 1982

	1982 £m	1981 £m

BY CHARLES BATHCHELOR

SHAREHOLDERS of Reynolds Diversified Corporation, the Nevada-based energy group which was suspended from trading in London in February 1982, yesterday approved a one-for-ten consolidation of its shares.

The effect of this is to create 200m shares of 10 US cents from the 20m existing 1-cent shares and the company hopes, put an end to its "penny stock" image.

Reynolds' new board, headed by London solicitor Mr Lynne Brooke, was subjected to frequently pointed questioning from nearly 100 shareholders at an extraordinary general meeting held in London yesterday.

The company expects to receive a reverse take-over bid from Pennant Pacific Resources (PPR), a gold and precious metals mining group headquartered in Toronto, Canada, and with a listing on the Alberta Stock Exchange, in Calgary.

Reynolds has given up its attempt to re-list its shares in London under the 1982 rule. It was suspended when the Stock Exchange discovered the group no longer had an over-the-counter listing in the U.S.

BOARD MEETINGS

The following companies have notified dates of board meetings to the Stock Exchange. Such meetings are usually held for the purpose of considering dividends. Officials indicate they are not available as to whether the dividends are interim or final and the sub-divisions shown below are based mainly on last year's statements.

Company	Date
Anglo Scottish Investment Tr.	May 5
Bentley & Co.	May 25
Bentley & Co.	May 25
Humberside Electronic Controls	Apr. 28
Associated Leisure	May 3
Borden Breweries (Wrexham)	Apr. 27
Cakebread Bakery	May 2
Copple	May 4
Gerrard and National	May 4
Hay (Norman)	May 3
Jessie Toyne and Gillett	Apr. 27
London and Liverpool Trust	May 3
Murdin and Peacock	May 3
Spar and Jackson Interiors	May 11

Under rule 163 (4), introduced in July 1982, the principal dealings in an overseas company must take place outside the UK, but 6,500 of Reynolds' shareholders are UK-based compared with about 1,000 in Australia and 350 in the U.S.

Shareholders questioned the Reynolds board closely yesterday on the likely price of any offer from PPR in view of the fact that Reynolds owns 46.5 per cent of that company and has three directors on its five-man board. PPR is a mining exploration company incorporated in Colorado which began life in November 1983 as Goldberg Plastics. It completed negotiations to buy four of Reynolds' Australian gold property interests and changed its name to PPR in January 1983 and obtained an Alberta Stock Exchange listing on March 4.

The rights issue document is available. However, completion of the deal depends on Reynolds obtaining permission to demutualise the existing hotel and to build a new one with 350 rooms and a 700-seat conference centre.

Reynolds said it has the support of the owners of 55.25 per cent of its shares for the rights issue, comprising 5.73 per cent held by directors and 49.52 per cent from other shareholders whom it declined to name.

The company said it needs a minimum subscription of \$9.5m of the total of \$11.35m, before expenses, to complete the funding of an hotel development project in Australia and its share of further exploration of oil and gas reserves at Ajman in the United Arab Emirates.

Mr Brooke described Reynolds' purchase of a 19-acre site at Kitchingham with the 1983-84 Hotel as "purely a property transaction" which did not require a special knowledge of the hotel industry.

The rights issue document is available. However, completion of the deal depends on Reynolds obtaining permission to demutualise the existing hotel and to build a new one with 350 rooms and a 700-seat conference centre.

Polly Peck swift to defuse criticism

Polly Peck (Holdings), the citrus fruit packaging group headed by Mr Asil Nadir, acted swiftly yesterday to try to defuse detailed criticisms published over the weekend concerning its group's profitability, the scope and feasibility of its expansion programme and its accounting methods.

The group's statement helped to stabilise the shares, which had at one point fallen to £15. They closed £15.50 down on the day at £18.

Shares in Polly Peck's associated companies fell, with Cornhill losing 24p to 143p and Wearwell dropping 13p to 54p. The main group stressed that its principal packaging subsidiary, Uni-Pac, is operating

from two citrus fruit packing stations, not one—as alleged in a recent article in the Observer—while a third is in the course of construction and should be operating by the beginning of the 1983 citrus season.

Uni-Pac, Polly Peck asserted, benefits considerably in its citrus business from being a buyer and not a grower of fruit. As it buys only high grade produce, it does not carry the cost of damaged or sub-standard fruit.

It also benefits from having a totally integrated operation extending from the purchase of fruit to the ultimate sale of the packaged product. This integration is reflected in the very good margins Uni-Pac achieves.

Polly Peck only decided to go ahead with the television assembly and manufacturing project in Turkey, in conjunction with Thoron Ltd after it had received the results of a detailed accounting report. The same scrutiny was also applied to the Niksar water bottling project, in association with Cornhill, which is due to start operations in October.

Niksar has never been projected to sell an annual 150-200m litres of water within three years or anything approaching that level.

Cornhill stated that it continues to be entirely happy with the potential of the project. The local authority has no participation in the scheme although

negotiations are in progress which may lead to the municipality receiving a small stake in the project for an expansion of the project with the Turkey Hotel as "purely a property transaction" which did not require a special knowledge of the hotel industry.

The rights issue document is available. However, completion of the deal depends on Reynolds obtaining permission to demutualise the existing hotel and to build a new one with 350 rooms and a 700-seat conference centre.

The rights issue document is available. However, completion of the deal depends on Reynolds obtaining permission to demutualise the existing hotel and to build a new one with 350 rooms and a 700-seat conference centre.

RESULTS AND ACCOUNTS IN BRIEF

BRITANNIA ARROW HOLDINGS (finance, property, publishing and distribution)—Results for 1982 reported March 24, 1983. Fixed assets £14.34m (£13.39m). Investments £1.65m (£1.17m). New current assets £11.5m (£11.85m). Shareholders' funds £50.51m (£34.1m). Payment to a former director on termination of employment £70,000 (nil). Meeting, iron-mongers' Hall, EC, May 19, noon.

BRITISH MOHAR SPINNERS—Results for 1982 already known. Shareholders' funds £1.77m (£2.15m); current assets £28.42m (£26.23m). Working capital decreased £4.69m (£2.5m increase). Dividends, Chartered Accountants' Hall, EC, May 19, noon.

KLEINWORT BENSON LONSDALE—Results for 1982 reported March 30. Total assets £3.7m (£3.77m). Advances £1.34m (£1.35m). Deposits £2.36m (£2.42m). Chairman confident of further progress. Meeting 20 Fenchurch Street, EC, May 17, at 11.45 am.

BENEFICIAL TRUST (banking, services, insurance, credit and finance leasing)—Results for 1982 already known for the subsidiary of Beneficial Corporation of the U.S. Shareholders' funds £1.32m (£1.32m); current assets £26.33m (£26.00m); current liabilities £41.32m (£24.65m); fixed assets £1.07m (£1.32m); net increase in funds £3.27m (£4.65m).

Extracts from the Chairman's Statement.**Building Society seeks more mergers and greater co-operation with other financial institutions.**

Head Office: Provincial House, Bradford.

Following National & Provincial's successful merger between the Burnley and Provincial in December, the new society is already looking towards the next.

In his statement to members at the Society's Annual General Meeting on 25 April, Chairman Mr. Dennis Howroyd predicts that further mergers will be sought. He says:

"The merger between national societies of the size of The Burnley and Provincial was a major financial event and one which provided a strong indication of the beliefs we hold regarding the future structure and requirements of our Industry. Having demonstrated an ability to achieve a major merger we have strengthened our appeal to other societies who take a similar view of the future. We will therefore continue an active search for further partners as a matter of priority."

Commenting on the future role of building societies he said:

"Powers for Societies to set up Banks and Insurance Companies do not, I feel, sit easily, with the

views which I have already expressed on the need for mergers within our Industry particularly bearing in mind the need to avoid costly duplication of effort. There is a strong case for exploring the common ground between financial institutions in order to avoid a serious fragmentation of effort leading to higher costs for the consumer."

Extracts from the 1982 Results

— More to homebuyers. The two constituent societies lent over £700m which enabled over 38,000 families to buy their own homes.

— More for home improvements. £62m lent to existing customers.

— More investors. 290,000 new accounts were opened during the year which increased the total in number at 31 December to over 1.6 million.

— More growth. Assets increased by 17.7% to £3,365m.

— More convenience. Customers needs are now serviced by 372 branches and 1018 agents.

"I commend these results to you in this, the first year of National & Provincial Building Society. May I say that I look forward with optimism to even greater progress in the years ahead in the full knowledge that our merger has given us the added size and strength we need to ensure our future success."

— Dennis Howroyd, Chairman.

National & Provincial
Incorporating The Burnley Building Society
More strength to help more people.

MINING NEWS

Hard times in Zimbabwe

A GLOOMY picture of Zimbabwe's once prosperous mining industry has been painted by Mr Roy Lander, retiring president of the Chamber of Mines at its annual meeting in Bulawayo. He said that it was in worse shape than at any time in the past 25 years, reports Tony Hawkins from Harare.

Mr Lander said that last year's fall in the value of the country's mining output of 2.7 per cent to 253,330m (£252.8m) made a total decline of nearly 8 per cent from the 1980 peak.

Mr Lander added that stocks in the hands of producers had risen, many companies had experienced losses and investment had fallen. This, of course, mirrors the gloom of the mining industry in other countries.

Zimbabwe's wage costs of 242,000m a year now represent more than half the total cost of the industry and Mr Lander cautioned the Government against further wage increases, adding that some mining companies would be unable to pay and the ultimate effect would be a further fall in the Zimbabwe currency.

He said that the larger share last year ran losses of some 251,600m against net profits of 234,000m in 1981 and 238,000m in 1980. Excluding the open-pit project of Wankar Colliery, capital investment in mining fell last year by 45 per cent to its lowest level since the mid-1970s.

Employment fell by 5,000 jobs, or seven per cent, but there were

still some 3,000 people on the payroll who were surplus to requirements but were being employed in line with Government policy against retrenchment. He knew of no major expansion projects being contemplated.

In the case of the Rio Tinto Zinc group's Rio Tinto Zimbabwe, however, the near-term outlook is less grim. Following the closure of the loss-making Empress nickel mine and other economies Riozim with its new Renos gold mine hopes to return to profitability this year if the gold price holds above \$425 per ounce. Riozim made a net loss of 235,000m and almost doubled its borrowings last year.

Gemstone trade organisation

THE formation of an international organisation to serve all aspects of the coloured gemstone trade was initiated at the International Precious Stones Congress in Tel Aviv. Nearly 300 specialists from 26 countries representing every stage from geology, mining, gemology, cutting, marketing and marketing to financing took part in the event, reports L. Daniel from Tel Aviv.

A committee of delegates from the participating countries will

meet in the U.S. It was decided to plan the new organisation and the twice-yearly congresses to be rotated among the major gem-producing countries.

Problems of supply of rough (uncut) stones, cutting technology, treatment, disclosures, financing, classification and nomenclature are subjects to be dealt with by this body. The move was proposed by Mr R. Nafise, president of the American Gem Trade Association, and

was approved unanimously. Other prominent participants in the Congress included Mr R. T. Liddicoat, president of the Gemological Institute of America, Mr E. G. Zoyas on sapphires and other gems from Sri Lanka, Mr Jan Kania on gem sources in central and South Africa, Mr Campbell Bridges on East Africa and other experts from Brazil, India, Thailand, Australia, Kenya and the Far East.

Samancor sees no improvement

THE world's largest producer of manganese, South African Manganese (Samancor), has had a tough time in the year to February 20 with net attributable profits falling to R14,000m (£2.67m) from R40,310m in 1981. No final dividend is being declared, thus leaving the year's

total at 5 cents against 10 cents in 1981.

Furthermore, the company says that on the basis of current forecasts it will do well to break even in the current year. Markets for the company's manganese, ferro-alloys and iron ore remain

depressed in line with the steel industry.

Samancor decided to mothball its ferro-alloy plant at the U.S. Roanoke division at Rockwood, Tennessee, resulting in a write-down of assets as well as taking account of future mothballing costs of R34,510m.

APPOINTMENTS

Senior post at Thorn EMI

Mr Gary Dartnall has been appointed executive chairman of both THORN EMI FILMS and THORN EMI VIDEO. Mr Brian North (managing director, Thorn EMI Films) and Mr Nicholas Bingham (managing director, Thorn EMI Video) will in future report to Mr Dartnall, who was previously president of the joint venture company, VED. Programs and VED Disc Manufacturing, based in Los Angeles.

Mr David Fielden has been appointed to the board of LONDON AND LIVERPOOL TRUST to be chairman of Hardley Leasing and the company's finance division, responsible for the overall development of L.L.T.'s financing and leasing operations. He was director, branch operations, Lloyds Bankmaker Finance Group.

Mr J. A. Crabbe, vice-chairman of DRG and director of the trading business group, retires on April 30. From May 1 Mr Michael G. T. Webster, a non-executive director of DRG since January 1976, becomes non-executive deputy chairman. He is chairman of Fitch Lovell. Mr J. Moger Woolley, assistant managing director of DRG and director of the packaging business group, assumes in addition responsibility for the manufactured stationery business group. Mr Hans B. Jorgensen, a director of DRG and present director of the manufactured stationery business group, becomes director of the trading business group. He will also take over Mr Woolley's responsibilities in the personal industrial relations field.

Mr Harry Rotshchild has been appointed managing director of FULMEN (UK), Fleet, battery manufacturer member of the CEAC group.

Dr Colin Phillips, chief executive and deputy chairman of Clyde Petroleum, has been appointed non-executive chairman of TANDATA HOLDINGS. Mr Peter Benton, until recently deputy chairman of British Telecom, and Mr Doug Sarchett, director of Gartmore Investment Management, have been appointed non-executive directors of the company. Clyde Petroleum has 20 per cent and Tandata 14 per cent holding in Tundata.

Mr Thomas F. Blackwell, chairman since 1959, has retired from TALEX WATER CO. The former vice chairman of the company, Lord Desmond Chichester, has been appointed to succeed Mr Blackwell, and Mr J. M. Haselgrave, a partner of John Taylor and Sons, consulting engineers, has been appointed vice chairman. Mr John Page was elected a director. Mr M. J. King has been appointed secretary, replacing Mr W. A. Cosgrove who continues as general manager.

ICI and Marley have completed negotiations to merge the activities of their respective subsidiaries, ICI Hydrate Products and Watlington Weston Co. The new company, WESTON HYDRATE PRODUCTS, with headquarters at Hyde, Cheshire, and in which Marley will hold 49 per cent of the equity, ICI 45 per cent, and Barclays Merchant Bank 6 per cent, will start trading on May 1. The board will be Mr Peter Wilson (chairman), Mr John Ford, Mr Robin Asher, Mr Derek Buckland and Mr David Ford. Mr Robert Neale and Mr Gareth Cooper will be joint managing directors. Mr David Williams has been appointed chief accountant and company secretary.

Ultralab AB, Swedish-based manufacturer of clinical chemistry analysers, is to establish a second manufacturing and

marketing facility outside Scandinavia. ULTRALAB LTD, has been established to help set up this operation and Mr Richard Morris has been appointed managing director. He comes from Coulter Electronics where he was international marketing manager.

EVE CONSTRUCTION has appointed Mr Roger G. Ames as a non-executive director.

Mr E. A. Hallis has been appointed a non-executive director of METAL CLOSURES GROUP.

STENHOUSE HOLDINGS has appointed Mr Harry Armstrong chairman of Stenhouse Syndicates and its Lloyd's underwriting agency subsidiaries and Mr Derek Bignall has been appointed managing director of these companies following the retirement of Mr Raymond Strange who has been chairman for the past 10 years. Mr Strange remains a director of Stenhouse Holdings and Reed Stenhouse Companies.

Mr R. P. Constant has been appointed principal manager, Middle East and Africa division, LLOYDS BANK INTERNATIONAL, in London, from May 1. Mr Constant joins LBI from Union des Banques Arabes et Françaises (UBAF), where, since 1975, he was chief executive of Financial Services. He was previously with Unigulf Investment and with the Ottoman Bank.

Mr A. Post has been appointed to the board of PHILIPS ELECTRONIC AND ASSOCIATED INDUSTRIES. He was formerly

Mr A. Post who is joining the board of Philips Electronic and Associated Industries

chairman and senior managing director of domestic appliances division of NV Philips in Groningen.

DEWPLAN GROUP has appointed Mr Gordon Cowen as managing director of its principal subsidiary Dewplan Water Treatment, from May 8.

GEC CLAUDGEN has appointed Mr James Cohen as managing director. He joins from GEC Transportation Projects, where he was marketing and proposals director.

Mr Michael H. C. Perry has been appointed deputy managing director of SIFAM, Torquay. He joined the Sifam board six months ago, and was previously managing director of Alginite Industries.

Mr Geoffrey C. B. Harrison has been appointed deputy managing director of JAMES HALSTEAD, floorcovering subsidiary of the James Halstead Group. He was manufacturing director.

Mr Russell Leiman and Mr Michael Thomas have been appointed directors of VICKERS DA COSTA (HOLDINGS) from May 1. Mr Thomas has also been appointed a director of Vickers da Costa, stockbrokers, from

UNILEVER HELD STEADY IN 1982

For the year 1982 our sales to third parties at closing rates of exchange were £13,216 million compared with £11,889 million in 1981. Sales volume was little changed.

Our results in sterling at £706 million were only just above those in 1981 but a significant factor affecting these results was the high level of restructuring costs, particularly in Europe. These costs, however, made a worthwhile contribution to an increase in productivity of 4% during 1982 in Unilever as a whole. We see these costs as part of the long term investment we are making in the future: a number of our operations improved their performance this year through steps taken in previous years to increase efficiency.

Our Annual Report indicates that we do not expect any significant improvement in world economic conditions in 1983. Nevertheless Unilever is ready to take advantage of any improvement in the world's economies as and when they come.

If you would like to receive a copy of the 1982 Report and Accounts please complete this coupon.

SLOUGH ESTATES-FORECASTS A FURTHER ADVANCE IN PROFITS

Pre-tax Profits	increase 20%
Earnings per Share	increase 5%
Dividends	increase 25%
Rental Income	increase 21%

Pre-tax profits of Slough Estates plc for the year ended 31st December 1982 rose by 20% from £13,467,000 to £16,166,000.

Dividends and earnings per share (pence)

1982 was a year of recession in all the countries in which the group operates and it was against this background that the profits advance was achieved.

There has been much talk about the difficulties that beset the property market and, while there is some substance in these gloomy predictions in the short-term, there is nevertheless scope for good results from well-selected and well-managed modern properties. We have the resources, the management and the experience to maintain a selective but aggressive programme of expansion taking full advantage of opportunities as they arise.

Fortunately, the quality and location of our property portfolio combined with the reduction in interest rates enabled us to make continued progress during the year.

Valuation
The gross book value of group investment properties and associates at 31st December 1982, taking into account an external valuation made on 30th September 1982, amounts to £498m after reflecting a revaluation deficit of £12m. This compares with a previous book value of £479m.

United Kingdom
UK activity was generally comparable with 1981 with the construction of some 460,000 sq. ft. of new industrial floor space. Rental income rose by 15.5% as a result of new lettings, rent reviews and reversions.
Land amounting to 11 acres was acquired at Colchester and Avonmouth. At the year end 279,000 sq. ft. of industrial space was under construction and also an 18,000 sq. ft. office building in Woking. An investment has also been made in a joint venture with Dixons Commercial Properties Ltd. to redevelop the Royal Hotel site in Slough.

Overseas
Business conditions deteriorated in Australia particularly in Melbourne but conditions in

Sydney are somewhat better and a prime 25 acre industrial site has been acquired in the suburb of Silverwater.

In Brussels the office property at Rue du Luxembourg was sold. Despite very difficult trading conditions the Canadian company's real estate activities continued to progress with net rental income increasing by 30% and 200,000 sq. ft. of industrial buildings being built.

In the United States conditions were generally unfavourable with very high interest rates and an oversupply of property available to too few prospective tenants.

Prospects
Whilst it is still too early to signal the end of the recession which has afflicted all the countries in which the group invests there are clear signs of improving confidence by business particularly in the United Kingdom and United States — evidenced by an improving level of enquiries and their conversion to lettings.

Since the rate of recovery may vary from country to country it remains difficult to predict accurately the outcome for 1983.

However, the group is in a very strong position thanks to the quality and location of its property portfolio and the strength of its balance sheet. I am therefore confident that we will be reporting a further advance in profits for the year.

Nigel Mobbs
Chairman

SLOUGH ESTATES Britain's leading industrial property owners and developers

Simon Engineering maintains profit in a difficult year

Preliminary announcement for the year ended 31 December 1982

Group results	1982 £000	1981 £000
Turnover	362,573	339,773
Profit before tax and extraordinary items	20,662	20,328
Profit after tax and extraordinary items	14,197	15,186
Profit before extraordinary items, attributable to Simon Engineering plc	13,348	13,909
Extraordinary items	(4,970)	(560)
Profit attributable to Simon Engineering plc	8,378	13,349

Dividends paid:		
Preference shares: 6% (now 4.2% plus tax credit)	39	39
Ordinary shares of 25p each:		
Interim 4p per share (1981-4p)	1,041	1,041
Proposed dividend:		
Ordinary shares of 25p each:		
Final 9.25p per share (1981-8.6p)	2,407	2,237
	3,487	3,317
Profit retained	4,891	10,032
	8,378	13,349

Earnings per ordinary share:		
Before extraordinary items	51.1p	53.6p
After extraordinary items	32.0p	51.5p

Extraordinary items: The principal extraordinary item is a provision of £4,896,000 (after tax relief) in respect of costs arising on the cessation of certain activities.

Ordinary dividend: The directors recommend a final dividend of 9.25p per ordinary share, making a total dividend for the year of 13.25p per ordinary share (gross equivalent 13.9286p, 1981 18.0000p). The final dividend, if confirmed at the annual general meeting to be held on 13 June 1983, will be paid on 1 July 1983 to members registered on 3 June 1983.

Balance sheet	1982 £m	1981 £m
Fixed assets and associated companies	60.8	59.9
Cash and deposits, less overdrafts	52.2	43.4
Other net current assets	5.1	7.3
	118.1	110.6
Shareholders' funds	95.6	88.5
Minority interests	7.1	8.5
Loan capital	11.1	10.3
Provision for pensions	0.5	0.6
Future and deferred taxation	3.8	2.7
	118.1	110.6

The 1982 accounts above are abridged versions of the audited accounts which will be filed with the Registrar of Companies and for which the report of the auditors was unqualified.

Remarks by the chairman, Harry Harrison

In the face of three years of declining economic activity in the UK and a deepening world recession in 1982, it is no small achievement to have slightly increased profit before tax and extraordinary items.

For all our companies, trading conditions have been difficult and low world levels of demand have intensified the squeeze on margins from international competitors, all with surplus capacity to fill.

In the circumstances it was inevitable that some of our units were unable to repeat their profit performance of last year. In particular, the continuing decline in investment in food processing machinery put our Food Engineering Group under severe pressures and its small increase in turnover was at the cost of much slimmer margins. The Oil Services Group, with its principal markets in the USA, felt the immediate impact of the dramatic decline in the levels of oil services and drilling activity in that country.

With the benefits of its diverse operating base the Manufacturing Group held its turnover reasonably well but again on tighter margins. The Merchants and Storage Group, though affected in both revenue and margin terms by the general recession in the oil and chemical industries, benefited from the considerable investment in storage we have made in recent years in expanding its facilities.

In the Process Plant Contracting Group some companies had a very difficult year but others did well and brought to profitable completion a number of long-term contracts. With the inclusion of the first full year's profits from Koger & Boxill and Simon-Carves (Africa) as a full subsidiary, the contribution from this group was good.

Overall, our wide spread of interests has again helped us to produce a reasonable result in another year of deep recession. Profit at the trading level showed a small decline but this was made up by an improvement in net interest receivable

and, in total, we have been able to continue our pre-tax profit growth albeit marginally.

The extraordinary items reported this year arose partly from the costs of rationalising and restructuring certain activities to improve their competitiveness and partly from the closure, after critical examination, of our drilling muds operation in the USA which incurred heavy losses following the collapse in oil drilling activity referred to earlier.

The profit results, the improvement in our cash position and the strength of our balance sheet are all measures of the great effort from our managers and employees throughout the Group during yet another demanding trading year. We are consequently in a strong position to take advantage of any upturn in trade and also of suitable opportunities for growth by acquisition.

The recovery for which the whole world has been looking is difficult to forecast with any certainty but there do now appear to be more consistent signs that the world economy, led by the USA, is on the upturn. No one is predicting or expecting that we shall quickly return to rapid growth, and in any case it will take time for any improvement to have a sizeable impact on companies supplying capital goods. Nonetheless, the outlook appears more encouraging.

An improvement in world investment and world trade now would be of more benefit to 1984 results than to the current year. Even so, on the assumption that a consistent upturn has truly started, we are looking for a reasonable outcome for 1983.

SIMON ENGINEERING

Simon Engineering plc,
Chaddle Heath, Stockport,
Cheshire SK3 0RT.

Food Engineering; Manufacturing; Process Plant Contracting; Merchants and Storage; Oil Services

Petrocon over £1m despite problems

DESPITE a 26 per cent drop from £9.1m to £6.7m in turnover, reduced drilling activity in most parts of the world, and continuing severe pressure on operating margins, pre-tax profits at Petrocon Group rose from £548,026 to £1,041,000 in 1982.

The directors say the main reason for the fall in turnover was that the 1981 figures included contributions from Ashford Controls—turnover of £2,07m and pre-tax profits of £101,058—which was sold in December 1981.

The final dividend is raised from 1.75p to 2.5p net, for a total up 50 per cent from 2.5p to 3.75p.

The group, provider of specialist services to the oil and gas exploration and production industries at home and overseas, continued to incur a low tax charge of £106,555 (£123,421), reflecting the extent to which group profits were allowed overseas and UK capital allowances.

S. Lyles makes slight improvement

West Yorkshire based carpet yarn spinner and dyer, S. Lyles, made a small increase in pre-tax profits from £266,929 to £270,747 for the half-year to December 31 1982.

Mr John Lyles, the chairman, says a continuation of favourable current trends—such as the increase in the number of housing starts, the more realistic recent value of sterling and a continuing of interest rates at around present levels—should help the company's efforts build up profit margins to a more realistic and worthwhile level.

The charge for the half-year was slightly lower at £81,500, against £84,000, and stated earnings per 20p share rose by 0.45p to 4.66p.

Lunuva Ceylon slightly down at £366,733

A marginal decrease in profits before tax for 1982 has been shown by the Lunuva (Ceylon) Tea & Rubber Estates, with the surplus lower at £366,733 against £369,233. However, there were extraordinary credits of £147m this time compared with £293,371.

The extraordinary surplus was on the disposal of five-eighths of the company's entitlement to shares in Harrison's Malaysian Berhad of £1.16m and £96,314 in payments from Sri Lanka.

A second interim dividend of 27p net has been declared in lieu of a final. This compares with the previous final of 27p for this company, which is ultimately held by Harrison's & Crossfield. This maintains the total at 33p.

Earnings per £1 stock unit are given as 24.66p against 27.72p before extraordinary credits.

In July last year it was announced that the board would consider with Harrison's & Crossfield what steps to take with regard to the future of the company. Stockholders will be informed immediately proposals have been formulated—they are expected shortly.

UK COMPANY NEWS

Hyman hit by computer losses

PRE-TAX losses of £1 and J. Hyman, a manufacturer and converter of plastic foam, rose to £241,150 for 1982 compared with 1981's £346,102. The dividend for the year is held at a nominal 0.1p per 5p share.

The directors blame the results on a combination of unexpectedly severe and abnormal losses in the computer division coupled with a slower upturn in demand for the group's traditional products which produced overall losses in the second six months of £442,166 (£505,203).

In their interim statement they expected results for the full year to be reasonably acceptable. However, the group has had a "very satisfactory" first quarter in the current year and with the exception of the computer division all companies have operated profitably.

It is pointed out that the group's high investment in

technological research and development over the last two or three years, much of which has been written off, is now producing good results.

A combination of these material improvements is already reflecting favourably in group borrowing requirements, the directors state.

Group turnover for 1982 expanded slightly from £20.47m to £22.23m and operating profits advanced from £137,783 to £331,831. However, these were subject to interest charges of £775,223, compared with a previous £296,568. Associates' profits added £18,202 (£13,001).

There were tax credits of £145,798 (£12,561) and minority credits of £12,274 (£164,740) but extraordinary debits rose sharply from £112,173 to £489,508 which lifted the attributable deficit to £557,727 (£280,574).

Loss per share was the same

as 0.81p pre-extraordinary items. These comprised losses on realisation of overseas investments £785,908 and reorganisation costs on closure and transfer of operations £101,947, less a surplus on realisation of assets in the UK £408,145.

comment

Hyman spent last year putting its house — whose foundations are mostly built on the shifting sands of the automotive and furniture industries — into order, so little was expected of its 1982 results. Nevertheless, the market had not expected a 22 per cent increase in pre-tax losses and marked the shares down 3p to 20p. Deferred VAT payments and the cost of financing new technology in the U.S. and UK foam businesses boosted the interest charge and borrowings now stand at 175 per cent of shareholders' funds. Ironically, Hyman's diversifications away from its recession-prone foam activities were the services drag on profitability. The computer services subsidiary, which has experienced a change of management and hefty redundancies, lost £300,000, while the new fast food company was substantially in the red. The group's tendency to start subsidiaries from scratch may be cheaper than diversifying through acquisition, but its recent experience points to the risks. However, the surgery is now over. Hyman has been able to put up its foam prices, and says the new technology is already leading to better cash flow via improved margins. With the extra orders from the Shumbarland interests the group predicts it will at least break even in the current year, even though past trading patterns have been erratic.

Unilever sees little change in economy

FOR 1983 the directors of Unilever believe they must plan on the basis that no significant improvement in economic conditions will take place but that they must make sure that the group is ready for any improvement when it comes.

Revealing this in their review of 1982 they point out that it is important to maintain expenditure in difficult times since it is an investment for the future, as is the group's research expenditure for new and better products.

During 1982 expenditure on research and development totalled £191m, compared with £182m the previous year.

In the course of 1982 a £7.5m extension was opened to the Port Sunlight laboratory, one of the group's three major research laboratories.

The directors say this completed the plan to bring together and strengthen research on

An analysis by geographical areas of group capital expenditure for 1982 shows: European Community countries £264m (£259m for 1981), other European countries £27m (£25m), North America £60m (£44m), Central and South America £16m (£23m), Africa £48m (£34m), and Asia, Australia and New Zealand \$66m (\$80m).

An analysis of capital expenditure by operations shows: margarine, other fats and oils, dairy products £85m (£68m), other

£103m (£82m), personal products £20m (£18m), chemicals £31m (same), paper, plastics, packing £19m (£32m), animal feeds £11m (£10m), UAC International £30m (£19m), and plantations, transport, other interests, £88m (£68m).

As already known combined group pre-tax profits for 1982 amounted to £726.4m (£709.2m) from sales of £13,225m (£11,890m). The group's NV side made profits of £394m (£364.7m) from sales of £7,777m (£6,955m).

Video disc arguments revived

Yet of the three rival systems sales, it is generally believed

Yet the RCA disc system is the one least able to challenge the videocassette in terms of versatility. Its appeal has been achieved by very low pricing of the players—sometimes discounted at \$199—and the remarkable range of titles available (currently 650, and expected to be 1,000 by the end of the year). In the UK, the Philips optical system—with under 200 titles available—is still an interesting

still) pictures on most aspects of motor car maintenance.

Thus the printed index on the sleeve contains 286 entries—from Aerials to Zinc guards—each of which is accompanied by a small picture so that the viewer can call it up on the disc. With occasional symbols superimposed over the moving picture, the viewer is advised at what points to use single frames, the alternative sound track (there are two),

versatile tape).

Viewers of the new Channel Four photography series, *What a Picture*, are unlikely to realise that the discs have been planned for ultimate release as video discs. Publishers Mitchell Beazley who made this witty (again) *Thorn EMI* have a great deal of unused material which was planned and shot for later use in video disc modules—designed as moving picture

—a great deal has been going on in industry and education, exploring and exploiting the novel advantages of the disc.

Such is the interest that many industrial companies in the UK have imported NTSC disc players from the U.S. for use in training, point of sale and similar applications. Educational uses are proliferating, with for example many U.S. schools

We are, Gentlemen,
Yours faithfully,

EDWARD TISH & PARTNERS
For Edward Tish & Partners,
Surveyors and Valuers.

The following is a copy of a Report by Edward Tish & Partners on the Taddale portfolio:-

Edward Tish & Partners,
52 George Street,
Baker Street,
London W1N 5PF.
25th April, 1983.

The Directors,
Edmond Holdings plc,
1 East Street,
Tottenham,
Kent TN11 1HP.

Gentlemen,

In accordance with your instructions, we have inspected the freehold properties set out hereunder with a view to advising you as to our opinion of the value thereof on the basis of open market value at 31st December, 1982.

Separate Valuations have been carried out in respect of groups of properties and separate portfolios, and we set out hereunder a résumé of the information found.

We have not carried out a structural survey of the properties. Generally the properties appeared to have been adequately maintained having regard to their age and type and the services appeared to be functioning satisfactorily at the time of our inspection.

We have excluded from our valuation any value attributable to plant, machinery, fixtures and fittings etc. other than those normally attributable to the tenancies.

No allowances have been made in our valuation for expenses of realisation or any taxation liability arising from the sale of properties.

We should mention that the presence or absence of High Alumina Cement, Calcium Chloride or other deleterious materials has not been determined by us but our valuation is on the basis of the absence of these materials.

Subject to the foregoing we are of the opinion that the open market value of the freehold interest in the properties as set out hereunder, subject to and with the benefit of any leases/tenancies disclosed to us, may be fairly assessed on values current as at the date hereof, in the total sum of £2,782,253 (two million, seven hundred and eighty-two thousand, two hundred and fifty-three pounds).

We wish to point out that the Valuation Certificate is issued for your use, and we do not accept responsibility to any third party for the whole or part of its contents.

ACCOUNTANTS' REPORT

The following is a copy of a Report on the Group received from Peat, Marwick, Mitchell & Co., Chartered Accountants:-

The Directors,
Edmond Holdings plc,
1 East Street,
Tottenham,
Kent TN11 1HP.

Peat, Marwick, Mitchell & Co.
1 Puddle Dock,
London EC4V 3PD.

25th April, 1983.

Edmond Holdings plc ("Edmond") was incorporated in March, 1981 as Allied Residential Public Limited Company and acquired its interests in the majority of its subsidiary companies in May, 1981, partly from Thames Investments & Securities PLC ("Thames") ("the Thames subsidiaries") and partly from Allied Plant Group PLC ("APG") ("the APG subsidiaries"). We have examined the audited accounts of Edmond and of its subsidiary companies for the two financial periods ended 31st December, 1982. We have also examined the reports included in the Prospectus dated 28th May, 1981, prepared by Ernst & Whinney, Chartered Accountants, on the Housing Group, and Serenno, Cohen, Rice & Partners, Chartered Accountants, on the Thames subsidiaries. In respect of the three years ended 31st December, 1980, this report has been prepared as if these companies had been subsidiaries of Edmond from the date of their acquisition by Thames and APG respectively. The Group acquired Thames Limited and Merit Projects Limited in September, 1981 and July, 1982 respectively and their results have been consolidated from their dates of acquisition. Edmond and its subsidiary companies are collectively referred to as "the Group". The accounts of the Group companies were audited by other firms throughout the period under review.

The audit report on the consolidated Group accounts for the year ended 31st December, 1982, was qualified on the grounds that the auditors were unable to comment as to whether or not shareholders' approval would be given to the transactions set out in the Circular sent to shareholders on 21st March, 1983 and, therefore, on the validity of the going concern basis on which the accounts of the Group had been prepared. Shareholders' approval was obtained on 25th April, 1983.

Consolidated accounts for the Group have been prepared for the year to 31st December, 1982, and for the seven months period to 31st December, 1981, based on the accounts of subsidiary companies for the years ended on those dates. Prior to 31st December, 1980 the individual subsidiaries did not all prepare accounts to 31st December. The results of earlier periods have therefore been apportioned, on a time basis, to the consolidated accounts for the Group on a calendar year basis. In view of this apportionment it is not possible to prepare statements of source and application of funds for the years ended 31st December, 1978 to 1980. In view of the major reorganisation of the Group structure during 1981 it is not possible to prepare a statement of source and application of funds for the year ended 31st December 1981. A statement of source and application of funds for the year ended 31st December, 1982 is set out below.

The summarised profit and loss accounts, balance sheet and source and application of funds set out below are based on the accounts prepared in accordance with the audited consolidated accounts of the Group for the years ended 31st December, 1982 and the audited accounts of the subsidiary companies for the year ended 31st December, 1981, adjusted as we consider appropriate. Prior to 1982 certain interest was included in the stock valuation. The present policy is to write off all interest as the profit and loss account as it is incurred. No adjustments have been made in respect of interest included in stock but the amounts involved are shown in Note 4.

Also set out below, for the five years ended 31st December, 1982, is the net rental income, after deducting taxation at 52% of the investment properties referred to above, and the results of the Taddale portfolio. This information has been extracted from the audited accounts of the companies which owned these properties for the five years ended 31st March, 1982 and from the unaudited accounts of the companies for the nine months ended 31st December, 1982. The results have been apportioned, on a time basis, so as to state the results on a calendar year basis.

We are unable to express an opinion on the work in progress of certain subsidiaries, affecting the years ended 31st December, 1978 and 1979, which was agreed at the directors' estimates of the lower of cost and net realisable value. The relevant accounts have, however, been confirmed to us as being correct and we are satisfied that such work-in-progress was properly calculated and correctly stated on a proper and consistent basis.

Subject to any effect on the profits for the years 1978 and 1979 arising from the stock valuations referred to above in our opinion the financial information set out below gives a true and fair view of the state of affairs of Edmond and of the Group at 31st December, 1982, of the results of the Group for the five years ended on that date, and of the source and application of funds of the Group for the years ended 31st December, 1982.

As explained in note 21, no current cost adjustments are required other than the increase in the unrealised revaluation surplus in respect of fixed assets mentioned in that note. In our opinion the calculations have been properly carried out in accordance with the policies and methods described in note 21 to give, together with that note, the information required by Statement of Standard Accounting Practice No. 16.

No audited accounts of Edmond or any of its subsidiary companies have been made up in respect of any period subsequent to 31st December, 1982.

NOTES ON THE PROFIT AND LOSS ACCOUNTS AND BALANCE SHEET

- Accounting policies
- Accounting Convention - The accounts are prepared under the historical cost convention.
- Turnover - Turnover represents the amounts received (including value added tax) for goods and services supplied to customers outside the Group during the period. Property sales are accounted for upon exchange of contracts provided the builders' work has been completed by the year end and legal completion occurs within a reasonable period after the year end.
- Associated Companies - The Group's share of profits, less losses, of associated companies is not included in the consolidated profit and loss account nor is its share of post-acquisition reserves included in the consolidated balance sheet since the amounts are not material.
- Depreciation - The cost or valuation of fixed assets is written off by equal annual instalments over the expected useful lives of the assets as follows:

Plant and equipment	5 years
Motor vehicles	4 years
Furniture and fittings	5-10 years
- Stocks, land on hand and work in progress - Stocks, land on hand and work in progress are stated at the lower of cost and net realisable value. In the case of work in progress cost comprises land being developed, direct materials, direct labour and an appropriate proportion of construction overheads. The allocation of construction overheads has regard to budgeted normal production.
- Deferred Taxation - Provision is made for deferred taxation, using the liability method, on short term timing differences and all other material timing differences except where these are expected to continue in the foreseeable future.
- Investment Properties - Investment properties are included in the balance sheet at their open market value. Surpluses less deficits on revaluation are taken directly to revaluation reserves. Profits and losses on disposals are included in the profit and loss account.

CONTRACTS

UK

£10m orders for Wimpey

WIMPEY CONSTRUCTION UK has been awarded a £3.7m contract to build new change rooms for British Nuclear Fuels at Sellafield. The structure comprises a precast concrete frame with precast metal cladding to elevations and roof, and work will commence next month.

A branch of Barclays Bank is to be built by Wimpey at St John's Hill, SW11, at a cost of £1.5m. On piled foundations, the bank will have a total area of 844 sq metres, a granite fascia and hand-made facing bricks on other parts of the building. Total floor area of the building will be 1,351 sq metres and there will be two floors. The building will have five floors, a basement, and a lean-to covered rear roof. The project has started and will take 65 weeks to complete.

Wimpey's services family unit will be built by Wimpey for the Property Services Agency, under a £1m contract. These are at Grove, Cheshire. The building will be a two-storey building with cover heating systems, electrical works, replacement windows, kitchen, bathroom and decoration in a project which will be completed in January 1984.

A £575,000 contract has been placed by Liverpool City Council with Wimpey for the refurbishment of 55 flats. Work has started for completion in December. Wimpey will replace windows and stone lintels, external power systems with lift, external bathrooms and internal central heating in two two-storey blocks.

Britoli has awarded a £2m contract to LLOYD'S REGISTER OF SHIPPING for the certification of the Clyde platform and facilities.

This includes independent assessment of design, survey and verification during manufacture, construction, installation, hook up and commissioning, and independent assessment of the provisions of the operations manual.

SIMON-VICARS, Newton-le-Willows (a Simon Food Engineering company), is to supply, install and commission a complete plant to manufacture 900 kg/hour of "Sunflower" brand soya cracker biscuits. The contract, valued at over £500,000, has been placed by Hebrion Biscuit Company of Manila, Philippines.

G. E. WALLIS & SONS has won contracts worth over £2m including two London refurbishments (22m) for L&L & General and the London & Manchester Assurance; sheltered flats and bungalows (12m) at Cwmbran, Gwent; bank branch rebuild (275,000) for NatWest at West Malling; and a sports pavilion (22m) for L&L & General at Chatham for Rochester Council.

The EXPRESS LIFT COMPANY, Northampton, a GEC company, has won a £2m contract to supply 55 lifts for a 15m twin-tower complex in Hong Kong. Known as the Shun Tak Centre, the development will replace the existing Macau ferry terminal. Express will be supplying computer-based control systems as well as a digital speed-control power system with lift speeds of up to 1,400 feet per minute.

Two hospital developments, together with a new wing, are being built by JOHN WILLIAMS CONSTRUCTION. The company has started work on

extensions to provide a community hospital for the North East Essex district at Clacton, and is in the early stages of a "turnkey" contract to build a "surge" hospital, to house the staff of the new Clacton Hospital.

The contract for the complete interior fittings out of the Foley Street, London, headquarters of the Press/Independent Television News, has been awarded to COMPLEX INTERIOR SYSTEMS, Watford. Valued in excess of £500,000, this contract involves work on four floors and a total area of 18,000 sq ft. A feature of the project will be the high sound insulation system of partitioning in the production and technical areas.

BRITISH TIMKEN, of Northampton, has won a contract worth over £250,000, for axlebox and transmission main bearings for an expansion of the Metro railway passenger network in Seoul, South Korea. Main contractors for the project are GEC Traction, Manchester. Work involves construction of 402 power and trailer cars, for use on an existing line and on two new lines. The development represents a significant extension to the first two lines of the network, which will be operated by the Seoul Metro Subway Corporation around the centre of the city. British Timken is supplying 130 mm bore for each rail axlebox, as well as tapered roller bearings for the transmission

plions of the power cars. The cars will be assembled in Korea by Daewoo Heavy Industries at its plant at Anyang, near Seoul.

EEV, Chelmsford, has received its first single order at NAB exceeding \$500,000 (£322,000) from Comark Communications Inc, Massachusetts, for UHF TV transmitters. This order results from Comark's introduction of its "S" series UHF TV transmitters incorporating EEV latest klystrons and magnetic broad-band assemblies of various power levels each cover the entire UHF frequency range.

GRANDMET SITE SERVICES, INC., a subsidiary of Grandmet International Services, part of the Grand Metropolitan group, has won a multi-million pound management services contract for the Alaska Pipeline in conjunction with an Alaskan company, Alaska Development Corp. The contract has been held for seven years by the Greyhound Corp. It is awarded by Alyeska, a consortium including BP, Exxon, Mobil, Arco, Amerasia Hess, Sohio and Union. GSS formed a joint venture company, Grandmet Alaska, with Alyeska whose shares are all owned by the Alaskan Indian people, to bid for the contract. It is the first contract to be awarded to a non-Alaskan company. The contract involves a wide range of services including site preparation, housekeeping and janitorial services at nine permanent and up to 25 temporary camp stations along the pipeline.

Supply of a Prestel videotext system in the Far East in a £2.7m contract with the British Telecom Group, has been awarded by GEC FUTURES working with its Malaysian associate, Perusahaan Telekom GEC Sdn, in Kuala Lumpur. It is a £2.7m contract for a videotext system involving GEC 4000 series computers, communications and supervisory network, videotext

domestic and business terminals, British Telecom Prestel software, ancillary equipment and local services.

GEC Computers believes this to be the first project to exercise the Overseas Development Agency Credit Protocol, in conjunction with a loan from National Westminster Bank supported by the UK Export Credit Guarantee Department.

HARRIS CORPORATION, government communications division, has awarded a multi-year contract valued at \$38m (£38m) to manufacture state-of-the-art medium terminal (SAAT) antennas for the U.S. Army defense communications system. Acting as a major subcontractor to Ford Aerospace and Communications Corp., Harris will produce 35 antennas, at its assembly and testing facilities in Palm Bay, Florida, with deliveries scheduled to begin in February 1984. The contract also contains an option for up to 25 additional antennas. The SAATs are a new generation of super high frequency terminals feature solid-state low noise amplifiers, and air-cooled (in place of liquid-cooled) transmitters whose consequent size reduction enables antennas rather than vanes to be mounted. They are also designed to provide improved reliability at considerably reduced operating costs.

PHILIPS BUSINESS SYSTEMS has awarded a £200,000 contract to a traffic surveillance scheme in Manchester. The contract placed by the Greater Manchester Police is for a camera system which will be used in conjunction with the city's computer-controlled urban traffic control system. The system will be installed throughout the city centre and will provide general surveillance of traffic flow.

INTERNATIONAL

Singapore railway works for Henry Boot

HENRY BOOT INTERNATIONAL has been awarded contracts worth \$13.5m in the Far East. In Singapore, the company is to undertake a \$2.5m trackway and civil engineering contract to a joint venture with Techfield Private, a local Singaporean company, for Singapore Public Works Department. The project involves the relocation of the main Singapore station marshalling yards to construct an expressway to the industrial area of Jurong. Over 10 km of track, including 43 turnouts, are to be supplied and installed, and a major turntable refitted. Associated civil works include embankments, cuttings, retaining walls and a large storm water culvert beneath the yards.

As part of the construction programme for a dam on the River Benutan in Brunei, Henry Boot International is to undertake civil investigation and civil engineering work in a \$500,000 contract for the Government of the Sultanate of Brunei. Specialised soil investigations will be carried out together with topographic and geological mapping. Large excavations are to be made adjacent to the Benutan river as well as the sinking of deep wells. These operations will be carried out with the design of the dam, which will form an impounding reservoir to increase the water supply to the capital, Bandar Seri Begawan.

The Procter and Gamble Company of Cincinnati, Ohio has placed a \$4.9m (£3.16m) contract with GEC Gas Turbines, through GEC's U.S. proposed subsidiary, The English Electric Corp. The order is for

the supply of one of GEC's type ELM-125 gas turbine generating units which will be used in a co-generation application at the Procter and Gamble facility in Sacramento, California. Rated at 21,100 kW the unit will operate at base load and its exhaust heat will be utilised to produce process steam for use in the production of such varied products as fabric softeners, synthetic detergents, industrial chemicals and prepared cake mixes. To meet local environmental requirements, water is being injected into the combustion chamber of the gas turbine to suppress nitrogen oxides emission. Evaporative cooling is used at the air intake to maintain power levels at summer temperatures.

Orders for 54m of medical diagnostic equipment have been placed by the International General Electric Company of New York. The South East Thames Regional Health Authority has ordered four hospitals. Five hospitals, three in the Birmingham area and two in the London area, have ordered CT 5800 scanners with a value of £1.5m. All five scanners are being produced at the International General Electric Company's Radiat manufacturing centre.

Six RFX systems valued at \$500,000 are being supplied, three to Merseyside hospitals, the Royal Liverpool Children's Hospital, the Fazakerly and the Clatterbridge hospitals, and the National Hospital for Nervous Diseases, Maida Vale. The Institute for Neurological Sciences, Southern General Hos-

pital, Glasgow (the first UK hospital to order this unit specially adapted for bi-plane myelography) and the Hospital of St Cross, Rugby. Two L11 Ang 100 vacuum systems worth over £500,000 have been ordered by Northwick Park Hospital, Harrow (with digital option) and the Bristol Royal Infirmary (with stepping tool for general angiographic procedures).

Sales of RACAL MARINE radars to navies and para-military forces during the first three months of this year reached £1.5m. These orders include equipment ranging from ARPA computer displays and 2450/F/1 air/sea surveillance units to the RD 150 small craft radar. A total of 19 ARPA's and one command tactical console, a special naval version, have been ordered by the UK Royal Navy, HMS Exeter, Plymouth. The Irish Navy Service - for its new offshore patrol vessel - and a far Eastern navy. Two anti-collision radars have been ordered by the Saudi Arabian Navy. The Indian Navy has ordered 12 inch radars by the Royal Navy and the navies of Belgium, Brazil, Greece, Holland, Hong Kong, Iran, the Canadian Navy and Oman - nine inch radars by Australia, Finland, Greece; and RD 150s by Bahrain and Thailand. The Royal Netherlands Navy ordered 12 inch radars for its 2450 F/1 surveillance unit connected to a command tactical console. The system will be installed in the replenishment ship, the Rijkswaarder, which will also have a RACAL-Decca ARPA and a 12 inch RM 1222 radar. Three dual surveillance 2450 F/1s have also been ordered for Canadian oil rigs and one by the Finnish Coastguard.

18. Capital commitments

There were no commitments for capital expenditure at 31st December, 1982.

19. Contingent liabilities

Edmond has given an unlimited guarantee to Barclays Bank PLC in respect of the bank borrowings of two of its subsidiaries, which at the balance sheet date amounted to £222,000.

Edmond has given an unlimited guarantee to Midland Bank plc in respect of the bank borrowings of four of its subsidiaries, which at the balance sheet date amounted to £2,258,000.

20. Post balance sheet events

It was announced on 23rd August, 1982 that agreement in principle had been reached with Mr. S. J. Croxley, a director of Edmond, for the sale to him of certain shares of Edmond in general terms. Following the agreement reached for the acquisition by Mr. Croxley of the shares, the proposed arrangements with Mr. S. J. Croxley were renegotiated. Under an agreement dated 24th March, 1983, Mr. Croxley will receive compensation of £250,000 and Edmond has agreed to sell to Mr. Croxley, the shares of the issued ordinary and deferred shares of Edmond Securities Limited ("Edmond") for a consideration of £250,000 subject to the approval of the Board of Directors of Edmond. The agreement was approved by the Board of Directors of Edmond on 27th March, 1983. On 21st March, 1983 the net amount owing by Edmond to other members of the Group was £204,185. It is a term of the agreement that £204,185 of the amount to be paid by Edmond to Mr. Croxley shall be paid by the Group in the form of a loan to Edmond. The balance will be converted into 1% redeemable preference shares of Edmond redeemable in 1985.

21. Current cost accounts

(a) Basis of preparation

Current cost accounts have been prepared in accordance with Statement of Standard Accounting Practice No. 16. The only adjustment necessary is an increase in the valuation of fixed assets as follows:

	Per historical balance sheet	At current cost
Fixed assets	242	257
Plant, equipment and motor vehicles	242	257
Current cost reserve	—	25
Revaluation surplus in fixed assets	—	25

No adjustments are required to the historical profit and loss accounts.

Except as stated below, the policies used in making the current cost accounts calculations are the same as those used in the historical accounts.

(b) Accounting policies

(i) Fixed assets and investment properties

Fixed assets and investment properties are included at their value to the business.

(ii) Stocks

Stocks are valued at the lower of current replacement cost and net realisable value.

Yours faithfully,

PEAT, MARWICK, MITCHELL & CO.

Chartered Accountants.

PRO FORMA BALANCE SHEETS

The following pro forma balance sheets of the Company and of the restructured Group are provided for illustrative purposes only and are not intended to be relied upon for any other purpose.

(a) Completion of the acquisition of the Tiddie portfolio on the terms of the Acquisition Agreement;

(b) Completion of the Croxley Agreement;

(c) The receipt by the Company of £1,400,000 in respect of the issue of 10,000,000 Ordinary Shares of 10p each at 14p per share;

(d) The Capital Reduction.

GENERAL INFORMATION

1. Share capital

(a) The Company

The Company was incorporated in England under the Companies Act 1948 to 1980 on 11th March, 1981 (No. 1550213) as a public limited company with an initial authorised share capital of £50,000 divided into 50,000 Ordinary Shares of £1 each of which were issued for cash at par on 18th March, 1981.

On 18th March, 1981, each Ordinary Share of £1 was sub-divided into five Ordinary Shares of 20p each and on 8th May, 1981 each Ordinary Share of 20p was further sub-divided into two Ordinary Shares of 10p each.

On 8th May, 1981, the authorised share capital of the Company was increased to £1,250,000 by the creation of 12,000,000 Ordinary Shares of 10p each.

On 28th May, 1981, 5,000,000 Ordinary Shares of 10p each in the Company were issued, credited as fully paid, as consideration for the purchase by the Company of the whole of the issued share capital of various companies from APD and Thames (see material contracts 8 (a) and (b) below).

On 28th May, 1981, a further 3,750,000 Ordinary Shares of 10p each in the Company were allocated for cash at 35p per share.

(b) Subsidiary Companies

Manila Limited—On 12th August, 1982 100 Ordinary Shares of 10p each were allocated for cash at par.

Manila Limited ("Manila")—On 12th May, 1981, the 2 subsidiaries' shares in Manila were allocated for cash at par and on 30th July, 1981 80 Ordinary Shares of 10p each were allocated for cash at par. On 12th August, 1982 100 Ordinary Shares of 10p each were allocated by way of rights issue to existing shareholders and the issuing 100 Ordinary Shares of £1 each were converted into 100 Ordinary Shares of 10p each.

North Suffolk Estates Limited ("NSE")—On 28th May, 1981, 68,000 Ordinary Shares of 10p each in NSE were allocated, credited as fully paid, by way of bonus issue to existing shareholders and the issuing 68,000 Ordinary Shares of £1 each were converted into 68,000 Ordinary Shares of 10p each. On 12th August, 1982 8,500 Ordinary Shares of 10p each were allocated for cash at 35p per share and the issuing 8,500 Ordinary Shares of £1 each were converted into 8,500 Ordinary Shares of 10p each.

Alaska Limited ("Alaska")—On 8th May, 1981, 318,340 Ordinary Shares of 10p each in Alaska were allocated, credited as fully paid, by way of bonus issue to existing shareholders and the issuing 318,340 Ordinary Shares of £1 each were converted into 318,340 Ordinary Shares of 10p each. On 12th August, 1982 31,834 Ordinary Shares of 10p each were allocated for cash at 35p per share and the issuing 31,834 Ordinary Shares of £1 each were converted into 31,834 Ordinary Shares of 10p each.

2. Subsidiaries

The Company has the following subsidiaries, all of which are private companies and are wholly owned—

Name	Date of incorporation	Issued share capital	General nature of business
Edmond Properties Limited	7.4.1959	£5,400	Property investment and holding company
Edmond Building Limited	24.3.1981	£47,000	Construction and building
North Suffolk Estates Limited	21.3.1981	£1,000	Property investment
Alaska Limited	4.12.1972	£251,700	Property holding and development
Manila Limited	13.8.1981	£100	Property investment
Manila Limited	5.8.1982	£100	Property investment
Manila Limited	14.3.1983	£100	Property investment
Manila Limited	30.7.1983	£100	Property investment
Manila Limited	1.5.1972	£100	Property investment
Manila Limited	1.5.1972	£100	Property investment

3. Directors' and other interests

At 18th April, 1983 the interests of the then Directors and the present Directors in the Company's share capital were as follows:

	Ordinary Shares of 10p	Option to Subscribe
M. R. Heathcote	50,000	100,000
J. Benjamin	50,000	100,000
J. Croxley	10,000	100,000
G. H. Mew	15,000	100,000
D. I. Bennett	10,000	100,000

Mr. D. I. Bennett has agreed to purchase 100,000 Ordinary Shares of 10p each and Benjamin Limited, a company controlled by Mr. M. R. Heathcote, has agreed to purchase 175,000 Ordinary Shares of 10p each under the plan referred to in paragraph 4 (a) below.

At 18th April, 1983 there were the following shareholdings in excess of 5 per cent. of the current issued share capital of the Company:

	No. of Shares	%
Thames Investments & Securities P.L.C.	2,971,607	28.7
Tiddie Investments P.L.C.	2,851,927	28.6
Tring Hill Securities P.L.C.	870,448	8.7

Save as disclosed, the Directors are not aware of any other shareholdings which represent 5 per cent. or more of the issued share capital of the Company.

(a) Mr. J. Benjamin is a director of and beneficially interested in approximately 11 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Benjamin is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. M. R. Heathcote is a director of and beneficially interested in 700,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Heathcote is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Croxley is a director of and beneficially interested in 100,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Croxley is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Mew is a director of and beneficially interested in 15,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Mew is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Bennett is a director of and beneficially interested in 10,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Bennett is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C.

(b) Mr. M. R. Heathcote is a director of and beneficially interested in 700,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Heathcote is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Benjamin is a director of and beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Croxley is a director of and beneficially interested in 100,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Croxley is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Mew is a director of and beneficially interested in 15,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Mew is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Bennett is a director of and beneficially interested in 10,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Bennett is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C.

(c) Mr. M. R. Heathcote is a director of and beneficially interested in 700,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Heathcote is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Benjamin is a director of and beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Croxley is a director of and beneficially interested in 100,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Croxley is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Mew is a director of and beneficially interested in 15,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Mew is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Bennett is a director of and beneficially interested in 10,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Bennett is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C.

(d) Mr. M. R. Heathcote is a director of and beneficially interested in 700,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Heathcote is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Benjamin is a director of and beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Croxley is a director of and beneficially interested in 100,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Croxley is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Mew is a director of and beneficially interested in 15,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Mew is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Bennett is a director of and beneficially interested in 10,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Bennett is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C.

(e) Mr. M. R. Heathcote is a director of and beneficially interested in 700,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Heathcote is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Benjamin is a director of and beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Croxley is a director of and beneficially interested in 100,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Mr. Croxley is also beneficially interested in 28.6 per cent. of the ordinary share capital of Tiddie Investments P.L.C. Mr. Mew is a director of and beneficially interested in 15,000 Ordinary Shares of 10p each in Tiddie Investments P.L.C. Every Friday the Financial Times publishes a detailed review of the activities in the UK and international property markets.

Specialist FT writers look at the background to the week's headline making news, profile leading personalities and examine trends in the property development market.

Similarly every Monday Financial Times journalists turn their attention to the building and engineering fields with particular emphasis on recently awarded British and foreign national contracts. These industry news features are articles on major developments in the important economic sectors.

INSURANCE & OVERSEAS MANAGED FUNDS

[illegible]

Light in weight, silky to the touch, yet as hard as steel. It is made of titanium, a corrosion-resistant metal that made the grade in space experiments and is more at home on the moon than on earth. Its case is inlaid with 18 carat pink gold. The crown is screened on and the sapphire crystal is treated against reflection. It is acid- and water-resistant.

Available for ladies and gentlemen.

Omega Seamaster Titane. Slightly out of this world.

ures are unconflict. Very high yields and low reflect the 2 weeks plus the current yield, but not the latest. Where a split or stock dividend amounting to 25 or more has been paid, the year's high-low range is based on the new stock only. Unlike other categories, dividends are annual distributions based on appreciation.

and also extra(s), b-annual rate of dividend plus a-liquidating dividend, cld-called, d-dividend yield, e-dividend declared or paid in preceding 12 months, f-Canadian funds, subject to 15% non-residence tax, g-split, h-split or stock dividend, i-dividend yield, j-outside, declared, or paid in preceding 12 months, k-outside, declared, or paid in preceding 12 months, l-outside, declared, or paid in preceding 12 months, m-outside, declared, or paid in preceding 12 months, n-outside, declared, or paid in preceding 12 months, o-outside, declared, or paid in preceding 12 months, p-outside, declared, or paid in preceding 12 months, q-outside, declared, or paid in preceding 12 months, r-outside, declared, or paid in preceding 12 months, s-outside, declared, or paid in preceding 12 months, t-outside, declared, or paid in preceding 12 months, u-outside, declared, or paid in preceding 12 months, v-outside, declared, or paid in preceding 12 months, w-outside, declared, or paid in preceding 12 months, x-outside, declared, or paid in preceding 12 months, y-outside, declared, or paid in preceding 12 months, z-outside, declared, or paid in preceding 12 months.

COMMODITIES AND AGRICULTURE

Dollar contract for soyameal

THE Soyabean Meal Futures Association (SOMFA) plans to introduce a dollar-based London soyameal contract parallel to its existing sterling contract, it said yesterday.

Trading in the new contract is hoped to start in two or three months and the initial delivery month will not be earlier than February 1984, SOMFA said.

The market's management committee made its decision in response to requests from market users who said they found difficulty in incorporating sterling contracts into their international dealings.

INDIAN GOVERNMENT is proposing the setting up of a joint council and a tax on just goods manufacturers. The council will study ways of increasing soyabean production and will be used to fund the research.

OLSEED PRODUCTION in India will be around 8.7m tonnes at the end of the season in October, said the Bombay-based Central Organisation for Oil Industry and Trade. Last year's production was 11.8m tonnes.

FOOT AND MOUTH disease has forced the closing of cattle markets in northern Spain, said the agricultural ministry. The disease is spreading in the north-eastern region.

GREEN COFFEE roasting in the U.S. in the week ended April 16 was about 285,000 bags. The figure for the corresponding week last year was 300,000 bags.

JAPAN WILL agree to limited expansion of import quotas for oranges and beef in U.S.-Japan trade talks in Washington next week according to reports coming from the Japanese Agriculture Ministry.

Farm talks postponed

BY OUR COMMODITIES STAFF

THE NEXT round of talks aimed at avoiding an agricultural trade war between the U.S. and the EEC have been postponed. The talks, due to start in Washington on Friday, have been put back at the request of the Community because of the delay in settling this year's price rises for EEC farmers.

Discussions on the Community annual farm price review are due to resume in Luxembourg tomorrow and could continue at least until Friday. Brussels hopes the talks with the U.S. will be held in early May, when the likely impact of the EEC farm price increases can be assessed.

The two sides are believed to be anxious to avoid confrontation before the Williamsburg conference. But on Friday the U.S. rejected a study carried out by the General Agreement on Tariffs and Trade (GATT) which said the EEC had an unfair advantage in wheat flour trading.

Meanwhile, the U.S. confirmed that it is seeking to negotiate a new long-term grain agreement to replace the existing pact expiring in September. Talks between the two countries have tentatively been scheduled for June, although the Soviets have not yet formally responded to the offer.

SHARP post-recession price rises are forecast for manganese and tungsten in a report published today by the Economist Intelligence Unit.

It says the main influence on industrial raw material prices over the next two years will be the timing and pace of economic recovery. But almost as important will be the extent of further cutbacks in productive capacity in developed countries over the next few months.

For individual materials price potential will be additionally influenced by commercial stock levels, special stabilisation schemes, changes in U.S. strategic stocks and the oil price trend, the report says.

Cotton prices likely to rise

BY OUR COMMODITIES EDITOR

COTTON PRICES are expected to strengthen this year, after a drop in the last week of the Union Argentina and Australia, plus a sharp cut in U.S. production as a result of the payment-in-kind programme, according to the International Institute for Cotton.

Dr R. E. Koedam, the Institute's Director of Economics and Market Research, said that world cotton stocks on August 1 this year would increase by only about 3 per cent, a much lower rise than initially feared.

He claimed cotton had survived the recession in the textile industry very well retaining a 50 per cent stake of the fibres market in spite of having little price advantage over its main competitor, polyester staple. The revival in textile activity should boost cotton demand, but the current high level of stocks should prevent there being excessive price increases, Dr Koedam added.

bauxite, natural rubber, tropical pine, plywood and coniferous sawnwood.

Price falls are possible in steel, iron ore, wood and man-made fibres while most other raw materials prices are expected to show little change between 1982 and 1985.

Overall a fairly slow move out of recession is predicted to lift average real raw material prices from their 1982 low to a little above the 1981 level. A more rapid pick up could push real prices above the 1979 level.

Prices of most metals after the recession, price 1980.

Uncertain outlook for copper

By Our Commodities Staff

PARIS—THE OUTLOOK for copper consumption during the second quarter of 1983 remains uncertain and production increases could cause the already high level of stocks to rise further, the International Council of Copper Exporting Countries (ICCEC) said in its latest quarterly review, out yesterday, reports Reuters.

The report said mines closed due to depressed prices could re-open following the rally in copper values early this year. Higher nickel prices might also bring increased output of copper as a by-product, it noted.

However, the report added that the recent fall in oil prices, lower interest rates and moves at the forthcoming Williamsburg conference to revive the world economy could boost demand for copper.

Copper prices, after opening on a firm note encouraged by the rise in Wall Street and gold, retreated to end the day virtually unchanged.

Another depressing influence was a further rise in copper stocks held in LME warehouses. Total holdings rose by 1,000 tonnes to a total of 314,075 tonnes. Stocks have now increased for 29 weeks in succession, but traders say that the Chinese remain interested in the metal.

There is a strong feeling within the ICCEC that there is a threat to its sugar. Despite the existing surplus of sugar on the world market, the EEC continues to encourage the expansion of beet sugar production. There is talk of the cost which the EEC has to bear for implementing the Sugar Protocol and further talk of encouraging the ACP, through aid, to diversify out of an admittedly inefficient industry is based on the dislocation which would be involved in resettling several hundred thousand workers in other parts of the world.

Mr Hugh Shearer, Jamaica's Foreign Trade Minister said that exports of sugar from Jamaica last year reflected the adverse effects of poor weather, and present indications are that this year's target may be achieved, but only just.

The situation in Trinidad and Tobago has been so unattractive that the government is taking about 13 per cent of cane land out of production, to be used for other forms of agriculture. The industry losses about \$900 (551p) on each tonne which is milled. F. O. Licht, the sugar statistician, have estimated Trinidadian output this year at 60,000 tonnes, following 78,000 tonnes last year and 93,000 tonnes in 1981.

The government in Barbados has injected \$10m into the ailing industry, with the hope of raising production in the next few years to the 120,000 tonne level of a few years ago. A spate of fire and drought have made it impossible to produce 197,000 tonnes. The Government is hoping that the slide has been halted, and that this harvest will yield 220,000 tonnes. But the island is in the grip of the worst drought in 55 years, fields in some low lying areas are subject to ever increasing salinity, and the benefits of re-equipping old mills are yet to be seen. Three years ago the Government set a target of 330,000 tonnes by 1984; this has now been rescheduled to 1988, but there appears little prospect in the short term for easing the industry's accumulated debts which now stand at just under \$150m.

There are plans to lease the six state-owned mills to private industry, but buyers are likely to be few until the factories are economically viable.

The one point of growth in production in the region is Bolivia, which expects to produce 115,000 tonnes, following 111,000 last year and 104,000 in 1981. But the country has been injured like others in the region by the state of the market. Earnings from exports fell from \$41m in 1981 to \$35m last year.

PROSPECTS for cane sugar in the 1980s are to be discussed at a four-day seminar starting in London today at the Commonwealth Institute. The seminar will review the position of both cane and beet sugar in the European Community and the involvement of trade unions.

There is little option for a producer to switch to other markets such as the U.S. The Commonwealth Caribbean's collective quota for the U.S. is 150,000 tonnes per year, 5.1 per cent of the U.S. quota. The major problem in the region, however, is uncommercial production, to the extent that some markets cannot be fully utilised. Guyana last year declared a 10,400 tonne quota on its quota of 125,400 tonnes, but still did better than Jamaica and Trinidad and Tobago which declared total shortfalls on quotas of 53,700 tonnes and 70,000 tonnes, respectively.

There are signs that the current harvest will be only marginally better than last year's, which was the worst in the past 30 years.

In Guyana, the Commonwealth Caribbean's largest producer, and with ten mills at a rated capacity of 450,000 tonnes per year, there are hopes that output this year will reach 300,000 tonnes. Mr Harold Davis, chairman of the Guyana Sugar Corporation, believes that by 1985, his country could be producing 550,000 tonnes per year, but that this would be at the cost of 300,000 tonnes last year reflected the adverse effects of poor weather, and present indications are that this year's target may be achieved, but only just.

Harvest forecasts offer little hope for revival

BY CANUTE JAMES IN KINGSTON

RETURN FROM the sugar cane harvest in the Commonwealth Caribbean is little better than the revival of this economically vital sector which has gone steadily more sour over the past few years.

Production last year by the group of 12 countries in central America to Guyana in South America, was 804,000 tonnes. Exports, which a decade and a half ago hovered comfortably around the 1.5m tonne mark, last year totalled about 850,000 tonnes.

The industry continues to be plagued by uncertain weather, either drought or too much rain, and by a spate of fires which have destroyed hundreds of acres of cane plants. The weak state of the market and simmering labour unrest have further depressed industry spirits.

Beyond all this, there is growing concern about the market in the European Community (all shipped to Britain) which guarantees the region a foothold under the Sugar Protocol.

There is a strong feeling within the ICCEC that there is a threat to its sugar. Despite the existing surplus of sugar on the world market, the EEC continues to encourage the expansion of beet sugar production.

There is talk of the cost which the EEC has to bear for implementing the Sugar Protocol and further talk of encouraging the ACP, through aid, to diversify out of an admittedly inefficient industry is based on the dislocation which would be involved in resettling several hundred thousand workers in other parts of the world.

Over a thousand analytical and informational memoranda, acquisitions and management buy-outs are reported in the Financial Times each year. If you're looking for one story it can be laborious checking through half a dozen to find out who paid what for whom.

Now we offer you FINANCIAL TIMES MERGERS & ACQUISITIONS, a new quarterly cumulative publication which lists all mergers, acquisitions and buy-outs that appear in the Financial Times.

It will give you the cost of the takeover.

If you want to find out how many acquisitions took place in a year, the property sector, then look up the industry listed in the "M&A." You'll also find indexes covering the company being acquired and the company making these takeovers in case for easy and quick reference.

And that's not all. In each issue you will find articles written by expert industrial commentators. They might highlight a particular deal which had important effects, pay attention to a particular industry or examine some of the problems of the machinery of take-overs and buy-outs.

Backed by the world-wide resources of an internationally respected business newspaper, the FINANCIAL TIMES MERGERS & ACQUISITIONS offers you a unique quarterly publication that will give you extensive research.

Yes, the "subscribers directory," Financial Times Business Information Ltd., "Market House, 100, Strand, London WC2R 0AL, England."

I am very interested. Please send me 1983 binding without charge to the FINANCIAL TIMES MERGERS & ACQUISITIONS.

I enclose the cheque for £25.00, or £20.00 for 1983, payment to Financial Times Business Information Ltd.
